

Standards For Mathematical Practice

Our session will start momentarily. While you are waiting, please do the following:

Enter/edit your profile information by going to:

- Tools - Preferences - My Profile...
- Fill out the info on the "identity" tab and click "OK"
- To view the profile of another user, hover your mouse over his or her name in the participants window

Configure your microphone and speakers by going to:

- Tools – audio – audio setup wizard

Confirm your connection speed by going to:

- Tools – preferences – connection speed

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
 www.gadoe.org

Clearing up confusion:

- This webinar is not about CCGPS content, it is about using the CCGPS Mathematical Practices this year with GPS content.
- For information about how and why CCSS were developed and adopted, watch: [common core- teaching channel](#) and this: [common core- math- teaching channel](#)
- GPS is taught and tested 2011-12. CCGPS is taught and tested 2012-13.
- I will provide a list of resources at the end of this webinar.

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
 www.gadoe.org

Welcome!

- Thank you for taking time out of your day to join this discussion.
- You should end the session today with at least 3 takeaways- *something you can do tomorrow, a list of resources, something to think about.*

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Think for 30 seconds, then share-

What is learning?

What defines an effective classroom?

How do students become proficient in mathematics?

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Answers from classroom teachers

- Learning happens when a student can make connections.
- Learning happens when a student can make sense of mistakes.
- Learning happens when students can think about their thinking.
- An effective classroom is a place where students are doing the work.

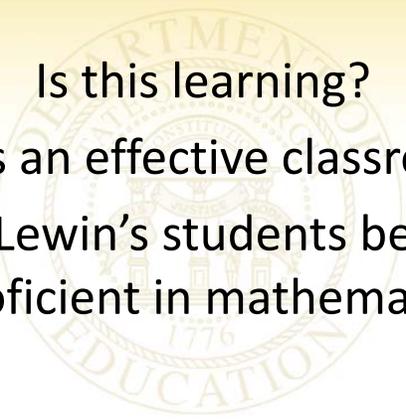

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Dr. Lewin video can be found at:

<http://www.youtube.com/watch?v=7Zc9Nuoe2Ow>

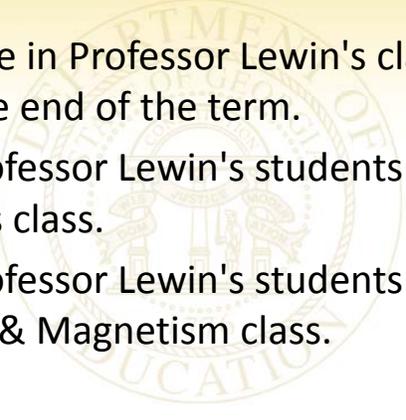

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Is this learning?
Is this an effective classroom?
Are Dr. Lewin's students becoming
proficient in mathematics?

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

- 
- Attendance in Professor Lewin's classes fell by 40% by the end of the term.
 - 10% of Professor Lewin's students failed his Mechanics class.
 - 14% of Professor Lewin's students failed his Electricity & Magnetism class.

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Where do we begin in creating a classroom environment which encourages **students** to take responsibility for their learning and allows them to become proficient in mathematics?

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
 www.gadoe.org

CCGPS Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them 6. Attend to precision	2. Reason abstractly and quantitatively 3. Construct viable arguments and critique the reasoning of others	Reasoning and explaining
	4. Model with mathematics 5. Use appropriate tools strategically	Modeling and using tools
	7. Look for and make use of structure. 8. Look for and express regularity in repeated reasoning.	Seeing structure and generalizing

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
 www.gadoe.org

Starting now: we can begin using Standards for Mathematical Practice

- “The Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their **students**. These practices rest on important ‘processes and proficiencies’ with longstanding importance in mathematics education.”
(CCSS, 2010)
- The mathematical practices require a “re –negotiation” of the classroom contract. (Classroom contract is often “sit, take-in, regurgitate”)
- 3 Major Shifts:
 - Teachers cannot create learning-only learners can do that.
 - Increased student responsibility- from receptive to active learner
 - Teacher/student relationship shift- from adversarial to collaborative
 Black and Wiliam, 2006

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

So what does the **teacher** do?

- Focus on more on learning, less on teaching.
- Ask questions related to the ideas the students are constructing, questions that illuminate the learner’s thinking.
- Provoke disequilibrium.
- Allow productive struggle.
- Think differently. Many of us have seen math as something to be learned, practiced, and applied. Now it is understood as interpreting, organizing, inquiring, and constructing meaning using a mathematical lens.

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Chew on this for a moment:

“Am I really interested in getting to know what is in *their* heads,
or,
do I just want them to know what is in *my* head?”

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Ann Shannon, 2011

What Not to Do

- Problem solving Friday
- Enrichment for the few
- Just give the answer
- Isolate content from process

Otherwise, it may lead to this...

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

CCGPS Standards for Mathematical Practice

These are the backbone of the practices.

1. Make sense of problems and persevere in solving them 6. Attend to precision	2. Reason abstractly and quantitatively	Reasoning and explaining
	3. Construct viable arguments and critique the reasoning of others	
	4. Model with mathematics	Modeling and using tools
5. Use appropriate tools strategically		
	7. Look for and make use of structure.	Seeing structure and generalizing
	8. Look for and express regularity in repeated reasoning.	

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

1. Make sense of problems and persevere in solving them.

- Mathematically proficient students:
 - start by explaining to themselves the meaning of a problem and looking for entry points to its solution.
 - can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends.
 - check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?"

6. Attend to precision.

- Mathematically proficient students:
 - try to communicate precisely.
 - state the meaning of symbols they choose, including using the equal sign consistently and appropriately.
 - are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem.
 - calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context.

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
www.gadoe.org

 "Making Education Work for All Georgians"
www.gadoe.org

What *teachers* do:

1. Make sense of problems and persevere in solving them.

- Provide time and facilitate discussion in problem solutions.
- Facilitate discourse in the classroom so that students UNDERSTAND the approaches of others.
- Provide opportunities for students to explain themselves, the meaning of a problem, etc.
- Provide opportunities for students to connect concepts to "their" world.
- Provide students TIME to think and become "patient" problem solvers.
- Facilitate and encourage students to check their answers using different methods (not calculators).
- Provide problems that focus on relationships and are "generalizable".

6. Attend to precision.

- Facilitate, encourage and expect precision in communication.
- Provide opportunities for students to explain and/or write their reasoning to others.

Word Problems vs Problematic Situations

- **Word problems:** Teachers assign them after they have explained operations, algorithms, or rules, and students are expected to apply these procedures to the problems.
- **Problematic situations:** Used at the beginning- for construction of understanding, generation and exploration of mathematical ideas and strategies, offering multiple entry levels, and supportive of mathematization.

"Making Education Work for All Georgians"
www.gadoe.org

(Young Mathematicians at Work, Fosnot, 2002)

Problem #1

What is the slope and y-intercept of $y = .5x + 5$?

(Does this question require students to engage in mathematical practices?)

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Problem #1

Original question:

What is the slope and y-intercept of $y = .5x + 5$?

New question with focus on SMP 1 and SMP 6:

Determine the cost of each ticket and the entry fee by using the table.

Number of Tickets	Cost
8	\$9.00
12	\$11.00
	\$12.50
23	

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Reasoning and explaining

2. Reason abstractly and quantitatively.

- Mathematically proficient students

- understand the quantities in a problem and how they relate to each other and to the units used in the problem.
- have the ability to decontextualize a problem, to represent it symbolically and manipulate the representations to solve a problem, and to recontextualize the solution as needed to apply it to a new situation.
- have the ability to contextualize problems as needed to help in the manipulation process in order to probe into the relationships between the variables involved.

3. Construct viable arguments and critique the reasoning of others.

- Mathematically proficient students

- understand and use stated assumptions, definitions, and previously established results in constructing arguments.
- make conjectures and build a logical progression of statements to explore the truth of their conjectures.
- are able to analyze situations to determine what is given, and can recognize and use counterexamples.
- justify their conclusions, communicate them to others, and respond to the argument of others.
- reason inductively about data, making plausible arguments that take into account the context from which the data arose.

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Reasoning and explaining

2. Reason abstractly and quantitatively.

- Mathematically proficient students:
 - make sense of the quantities and their relationships in problem situations.
 - have the ability to decontextualize - to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents.
 - have the ability to contextualize - to pause as needed during the manipulation process in order to probe into the referents for the symbols involved.

3. Construct viable arguments and critique the reasoning of others.

- Mathematically proficient students:
 - understand and use stated assumptions, definitions, and previously established results in constructing arguments.
 - make conjectures and build a logical progression of statements to explore the truth of their conjectures.
 - are able to analyze situations by breaking them into cases, and can recognize and use counterexamples.
 - justify their conclusions, communicate them to others, and respond to the argument of others.
 - reason inductively about data, making plausible arguments that take into account the context from which the data arose.

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"

 - justify their conclusions, communicate them to others, and respond to the argument of others.
 - reason inductively about data, making plausible arguments that take into account the context from which the data arose.

Dr. John D. Barge, State School Superintendent
 "Making Education Work for All Georgians"
www.gadoe.org

Reasoning and explaining

What teachers do:

2. Reason abstractly and quantitatively.

- Provide a range of representations of math problem situations and encourage various solutions.
- Provide opportunities for students to make sense of quantities and their relationships in problem situations.
- Provide problems that require flexible use of properties of operations and objects.
- Emphasize quantitative reasoning which entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, **not just how to compute them and/or rules**; and knowing and flexibly using different properties of operations and objects.

3. Construct viable arguments and critique the reasoning of others.

- Provide **ALL** students opportunities to understand and use stated assumptions, definitions, and previously established results in constructing arguments.
- Provide ample time for students to make conjectures and build a logical progression of statements to explore the truth of their conjectures.
- Provide opportunities for students to construct arguments and critique arguments of peers.
- Facilitate and guide students in recognizing and using counterexamples.
- Encourage and facilitate students justifying their conclusions, communicating, and responding to the arguments of others.
- Ask useful questions to clarify and/or improve students' arguments.

Problem #2

If, $h(t) = -16t^2 + 30t + 200$ what is the value of the function when $t = 2$?

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Problem #2

If, $h(t) = -16t^2 + 30t + 200$ what is the value of the function when $t = 2$?

Myth Busters' crew is testing the theory of throwing a penny off a building. At the top of a 200 ft building a penny is thrown into the air at 30 ft/sec, how high off the ground is the penny after 2 seconds? When will it start to fall to the ground? When will it hit the ground? Justify your answers.

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Modeling and using tools

4. Model with mathematics.

- Mathematically proficient students
 - can apply the mathematics they know to solve problems arising in everyday life, careers, and the workplace.
 - can apply what they know about modeling to simplify a complicated situation, and realize that simplification does not always result in an easier problem.
 - are able to identify important relationships in a situation, and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts, and formulas.
 - can analyze those relationships to make a plan or draw a conclusion.
 - routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly revising the model if it has not served its purpose.

5. Use appropriate tools strategically.

- Mathematically proficient students:
 - consider the available tools when solving a mathematical problem.
 - are sufficiently familiar with tools for grades 4–12 to make sound decisions about when each of those tools might be helpful, recognizing both the insight to be gained and their limitations.
 - are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems.
 - are able to use technological tools to explore and deepen their understandings of concepts.

Modeling and using tools

4. Model with mathematics.

- Mathematically proficient students:
 - can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace.
 - can apply what they know, are comfortable making assumptions to simplify a complicated situation, and realize that these may need revision later.
 - are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts, and formulas.
 - can analyze those relationships mathematically to draw conclusions.
 - routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

5. Use appropriate tools strategically.

- Mathematically proficient students:
 - consider the available tools when solving a mathematical problem.
 - are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations.
 - are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems.
 - are able to use technological tools to explore and deepen their understandings of concepts.

Modeling and using tools

(what teachers do)

4. Model with mathematics.
 - Provide problem situations that apply to everyday life.
 - Provide rich tasks that focus on conceptual understanding, relationships, etc.

5. Use appropriate tools strategically.
 - Provide a variety of tools and technology for students to explore to deepen their understanding of math concepts.
 - Provide problem solving tasks that require students to consider a variety of tools for solving. (Tools might include pencil/paper, concrete models, empty number line, ruler, calculator, etc.)

Seeing structure and generalizing

7. Look for and make sense of structure.

- Mathematically proficient students:
 - look closely to discern a complex figure
 - can see complicated figures, such as polygons, as single objects or as being composed of simpler objects
 - recognize the significance of an angle or triangle in a diagram and can use the strategy of drawing an auxiliary line for a problem
 - can step back for an overview and shift perspective

8. Look for and express regularity in repeated reasoning.

- Mathematically proficient students:
 - notice if calculations are repeated and look for general methods and for shortcuts
 - maintain oversight of the process as they work to solve a problem, while attending to the details
 - continually evaluate the reasonableness of their intermediate results

Dr. John D. Barge, State School Superintendent
"Making Education Work for All Georgians"
www.gadoe.org

Seeing structure and generalizing

7. Look for and make sense of structure.

- Mathematically proficient students:
 - look closely to discern a pattern or structure.
 - can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects.
 - recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems.
 - can step back for an overview and shift perspective.

8. Look for and express regularity in repeated reasoning.

- Mathematically proficient students:
 - notice if calculations are repeated, and look both for general methods and for shortcuts.
 - maintain oversight of the process as they work to solve a problem, while attending to the details.
 - continually evaluate the reasonableness of their immediate results.

Connecting the Standards for Mathematical Practice to the Standards for Mathematical Content

- The Standards for Mathematical Content are a balanced combination of procedure and understanding.
- Expectations that begin with the word “understand” are often good opportunities to connect the practices to the content.
- Students who lack understanding of a topic may rely on procedures too heavily.
- Without a flexible base from which to work, students may be less likely to :
 - consider analogous problems, represent problems coherently
 - justify conclusions
 - apply the mathematics to practical situations
 - use technology mindfully to work with the mathematics
 - explain the mathematics accurately to other students
 - step back for an overview
 - deviate from a known procedure to find a shortcut.
- *A lack of understanding effectively prevents a student from engaging in the mathematical practices.*
