The Teacher Notes were developed to help teachers understand the depth and breadth of the standards. In some cases, information provided in this document goes beyond the scope of the standards and can be used for background and enrichment information. Please remember that the goal of social studies is not to have students memorize laundry lists of facts, but rather to help them understand the world around them so they can analyze issues, solve problems, think critically, and become informed citizens. **Children's Literature:** A list of book titles aligned to the 6th-12th Grade Social Studies GSE may be found at the Georgia Council for the Social Studies website: [http://www.gcss.net/uploads/files/Childrens-Literature-Grades-6-to-12.pdf](http://www.gcss.net/uploads/files/Childrens-Literature-Grades-6-to-12.pdf)

**TEACHER NOTES**

**WORLD HISTORY**

**SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.**

Overview: Students will be expected to explain how and why humans made the transition from small Neolithic villages to the first large scale complex societies located in Mesopotamia, Egypt, South Asia, China, Sub-Saharan Africa, and Mexico. Emphasis should be placed on how the climate and geography shaped the government, economy (including trade and agriculture), and cultural features (including religion, social class, language and the arts). Students should be able to note similarities and differences in the development and characteristics of each civilization. Further, students are expected to explain how these societies changed over time as a result of interactions with neighboring civilizations.

**Resources:**

Visit this National Geographic website for an article by Charles Mann which rethinks why humans made the transition from Neolithic villages to civilizations.

**SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.**

a. Compare and contrast Mesopotamian and Egyptian societies, include: religion, culture, economics, politics, and technology.

Mesopotamian and Egyptian civilizations developed in substantially different environments. While both civilizations developed in fertile river valleys rich with silt from the annual flooding of the Nile in Egypt and the Tigris and Euphrates in Mesopotamia, the flood patterns and geography of the surrounding area were quite different. These differences led to the development of starkly different outlooks on religion and political histories.

Farming villages emerged in both regions between 7,000 and 5,000 years ago. Over time these societies improved agricultural technologies like irrigation canals, leading to population growth and the development of the first urban centers like those in Ur and Uruk in Mesopotamia and the kingdoms of Upper and Lower Egypt.
Mesopotamia developed in the fertile arch (known as the Fertile Crescent) along the Tigris and Euphrates rivers that runs from the Persian Gulf in the south to the Mediterranean Sea in the north. This desert region is prone to irradiate flooding and lacks natural boundaries, making it susceptible to frequent invasions. Egypt on the other hand developed in the narrow fertile ribbon on the banks of the Nile River. The Nile floods with remarkable regularity from July to October of each year. Each time depositing rich silt that was ideal for agriculture, this regularity was known as the Gift of the Nile which led to remarkable stability in Egyptian society. Another factor that contributed to this stability included natural boundaries that made invasions unusual. To the north and east large bodies of water protected Egypt and to the south and west vast deserts.

These environmental differences led to starkly different outlooks of religion. Both the Egyptians and Mesopotamians were polytheistic with Gods that represented elements of nature, but because the natural world of each civilization was so different, attitudes toward these Gods were quite different. In general the Gods of Mesopotamia were viewed as unpredictable and often elicited the fear of the population which tried to win their approval with sacrifices and the construction of elaborate temples called Ziggurats. Egyptian religion on the other hand, presented Gods that could be depended on to provide bounty and prosperity. This difference was also reflected in each civilization’s view of the afterlife. Mesopotamians believed that the afterlife was a fearful and gloomy place while Egyptians believed that good deeds in life were rewarded with an afterlife rich in the same pleasures they enjoyed while alive. These Egyptian views on death and the afterlife led to elaborate burial practices that included the construction of tombs and mummification.

Environmental difference also led to remarkably different political histories with Mesopotamia marked by frequent change and Egypt experiencing substantial continuity. The first phase of Mesopotamia’s political history, known as Sumer, was dominated by several independent and often warring city-states, each with its own hereditary monarch. Each city-state had a walled urban area made up of simple mud-brick dwellings and a ceremonial and administrative center dominated by a Ziggurat. Outside of the city walls, each city-state controlled the large areas of surrounding farmland land. Around 4,000 years ago the King of Akkad, Sargon, conquered this region creating the world’s first empire. This empire was
relatively short lived as several waves of invasions and insurrection shifted political power to other
groups. One of these groups, the Babylonians brought important political innovation when they unified
the region in the 18\textsuperscript{th} century BCE. The Babylonian King Hammurabi introduced the World’s first
written law code which limited the arbitrary justice of earlier kings. The Old Babylonian Empire as it is
known by historians also witnessed a flowering in mathematics and literature. However, like the
Mesopotamian empires that came before, Babylonians succumb to invasion leading to a series of warring
empires. These empires included the Hittites, an Indo-European speaking people who arrived in the
region about 2000 BCE bringing iron technology, the Assyrians who rose in power around 1900 BCE,
and the Persians who began to build a long-lived empire around 550 BCE.

Egypt, protected by vast desert and seas, saw far fewer invasions and as a result had a remarkably stable
political history for over 2,000 years. This history began about 3,000 BCE with the unification of Upper
and Lower Egypt into a single kingdom ruled by a divine hereditary monarch known as the Pharaoh. The
Pharaohs were aided by an elaborate bureaucracy that included priests, administrators and scribes. This
government was able to undertake elaborate public works projects like the construction of Pyramids that
served as tombs for the Pharaoh. Historians divide Egyptian History into the Old Kingdom (c. 2649 to
2150 BCE), the First Intermediate Period, Middle Kingdom (c. 2030-1640 BCE), the Second Intermediate
Period, and the New Kingdom (c. 1550-1070). The intermediate periods mark the only major times
instability in Egypt before 1070 BCE. During the Second Intermediate Period, Egypt experienced its first
major invasion from the Hyksos of Mesopotamia who introduced the region to the horse, chariot and
compound bow. After 1070, the political histories of Egypt and Mesopotamia intersected as they both
experienced invasions from groups like the Hittites (who introduced Iron to the region), Assyrians and
Persians.

Fertile river valleys combined with technological advances like irrigation canals and plows allowed both
Mesopotamia and Egypt to produce surplus food. With an agricultural surplus, both empires developed
specialization of labor which in turn led to the development of social classes. Both societies had the same
basic social hierarchy with the royal family at the top followed by priests, government officials,
landowners, soldiers, and scribes constituting a ruling class followed by merchants and artisans in the
middle and peasant farmers at the bottom. Mesopotamia tended to rely more heavily on slaves but Egypt
developed a slave class made up mostly of foreigners later in its history. This specialization of labor
allowed both societies to make notable cultural and technological advances. Both Mesopotamia and
Egypt developed complex systems of writing, cuneiform and hieroglyphics respectively. Both also
developed advanced literary, artistic and architectural traditions including The Epic of Gilgamesh from
Mesopotamia.

SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.

b. Describe the societies of India and China, include: religion, culture, economics, politics, and technology.

Farming villages first appeared in South Asia about 3200 BCE in the fertile plain between the Indus and Ganges rivers. This region’s climate is dominated by monsoon rains and a wall of mountains to the north and west partially isolate its people. Urban centers appeared about 2500 BCE with Mohenjo-Daro and Harappa being the most significant.

Little is known about these early civilizations because historians are unable to read the written language of the region but urban planning in Mohenjo-Daro and Harappa indicate the presence of a strong central government. The cities were elevated and surrounded by earthen walls and levees to protect them from flooding. Inside the walls, the streets were laid out on a grid system. Homes were constructed of baked brick, each with its own bathroom served by a city-wide sewer and plumbing system. Each city had a fortified citadel in the center which likely served as the political and religious center. Archaeologists have found a large number of children’s toys and few weapons, indicating that these societies were generally peaceful. The economy was dependent on agriculture with evidence of trade with the Middle East and Central Asia.

Urban decay, possibly brought on by earthquakes and soil exhaustion set in around 1750 BCE. A new group of people, the Indo-European Aryans, migrated into the region in about 1500 BCE. This group eventually established the Magadha Kingdom which controlled a portion of northeast India by the second century BCE.

The farming villages between the Huang He and Yangtze Rivers of China grew into cities about 2000 BCE. These urban areas both benefited from and suffered because of the rich but loose yellow silt called loess deposited by the flooding of Yangtze. While the soil supported agriculture its loose nature made major shifts in the course of the river and massive floods common. These struggles are recorded in Chinese legend as the Xia Dynasty whose Emperor Yu is said to have brought flood control and irrigation to China.
The first documented dynasty of China was the Shang which was founded about 1700 BCE. This dynasty started a long tradition of governance in China that included a hereditary monarch supported by a complex bureaucracy.

Like other early civilizations, during the Shang period urban centers were walled and surrounded by large agricultural areas. While the economy was dominated by agriculture, craft production and trade were also present. China developed a writing system, complex urban planning, irrigation and flood control in this period.

This period also saw the emergence of foundational and interconnected Chinese religious principles. These include concept of Yin and Yang which offered an early and enduring understanding of the universe as balanced between male and female forces. Daoism, founded by Lao Tsu, asked humanity to respect and live in harmony with nature and ancestor worship venerated deceased family members in the hope that they would intercede with the powers in Heaven on behalf of the living.

SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.

c. Explain the development of monotheism, include: the concepts developed by the ancient Hebrews.

While aspects of monotheism emerged in a variety of places and times including in Egypt under the Pharaoh Amenhotep IV in the mid-1300s BCE and in Persia after growth of Zoroastrianism in the 600s BCE, monotheism reached its most complete and enduring form among the Hebrews starting around 1250 BCE.

These beliefs, recorded in the Hebrew Bible, begin with the Hebrew people (led by Moses) entering into a covenant with God in which God promises to protect His chosen people in exchange for their exclusive obedience to Him. The basic tenants and Judaism, including monotheism, were established in this period as the Ten Commandments.

The Hebrew people established a kingdom on the eastern Mediterranean in about 1020 BCE which split into two kingdoms in 920 BCE. The concept of monotheism became more formalized during this period and was spread to other areas by the Jewish diaspora that began with the conquest of the northern Kingdom of Israel by the Assyrians in 721 BCE and the deportation of many Jewish leaders to Babylonia in 587 BCE. While in Babylonia, the institution of the Synagogue was established and in about 450 BCE Judaism as a monotheistic faith was fully developed with the completion of the Hebrew Bible.

SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.

d. Identify the Bantu migration patterns and contribution to settled agriculture.

Agricultural villages became common in West Africa below the Sahara desert about 4,000 years ago. Sometime after, these villages developed iron technology which they used to produce tools of agriculture. Extensive linguistic evidence suggests that West Africans from around the modern border between Nigeria and Cameroon began to use this technology to clear forest to the southeast for farming. This led to a slow migration of these Bantu speaking people to the southeast and south from about 500 BCE to 600 CE. This migration brought agriculture, iron technology, and a new language to a region previously dominated by hunter gatherers. Anthropologist believe that this migration laid the foundation for a common cultural heritage present in much of West, Central, East and South Africa.

SSWH1 Analyze the origins, structures, and interactions of societies in the ancient world from 3500 BCE/BC to 500 BCE/BC.

c. Explain the rise of the Olmecs.

Civilizations also developed in the Americas in this period. Geographic isolation made them more unique but they followed many of the same patterns of civilizations in Afro-Eurasia.

Agricultural villages based on the cultivation of corn, beans, and squash emerged about 3500 BCE. These villages grew into a variety of urban centers around 1200 BCE, the most influential of which was the Olmec culture found in the modern Mexican states of Veracruz and Tabasco.

Political authority and social stratification developed in these urban areas as a result of agricultural surplus and the need to mobilize large numbers of people to construct irrigation systems, ceremonial buildings and to drain land for farming.

Sophisticated urban planning based on the movement of the stars, the creation of monumental artwork including several giant Olmec head statues, and the construction of monumental architecture indicate a strong central government able to mobilize the labor of the population over time. Each Olmec city was likely independently ruled by a hereditary monarch who maintained power by presenting himself as an intermediary to the gods. These rulers, assisted by a class of priests, performed awe inspiring rituals on large platforms in the center of each city that included bloodletting and human sacrifice. These rituals served to reinforce the power of the state and laid the cultural foundations for the civilization that followed.

The Olmec economy like other ancient civilizations was dominated by agriculture but sophisticated trade networks and craft production also existed.

Resources:

SSWH2 Identify the major achievements of Chinese and Indian societies to 500 CE/AD.

Overview: Students will be expected to explain the development of the Classical Age societies of China and India with a special attention to the religious, philosophical, and political developments that left an enduring legacy. Focus should be placed on the changes and continuities each region experienced in the transition from small regional kingdoms to large multi-ethnic empires. Further, students are expected to explain how trade routes connected these empires to the outside world which fostered cultural, economic and technological development.

SSWH2 Identify the major achievements of Chinese and Indian societies to 500 CE/AD.

a. Describe the development of Indian civilization, include: the rise and fall of the Maurya and Gupta Empires.

The Maurya (324 BCE to 184 BCE) were the first empire to unify large areas of India. There is some evidence that the founding emperor Chandragupta Maurya may have been inspired by Alexander the Great whose death left a political vacuum in Northwest India that the Maurya filled. The empire was ruled by a hereditary monarch aided by an elaborate bureaucracy made up of relatives and close associates who governed ethnicity based regional provinces. The central government was able to collect high taxes, issue a standard currency and maintain control of mining. This was facilitated by an extensive network of spies that kept the central government aware of disloyalty. Further, a powerful standing army that included elephant, chariot, and cavalry divisions helped secure this power.

While agriculture remained the primary economic activity, an extensive network of roads and maritime connections to Southeast Asia and the Middle East foster both internal and international trade. India profited from the export of cotton cloth, iron, and salt.

In 269 BCE the Emperor Ashoka came to power ushering in a period of religious pluralism and tolerance. As a young man, Ashoka engaged in violent wars of conquest. Guilt associated with this violence drove Ashoka to convert to Buddhism. As a Buddhist emperor, he made it state policy to promote Buddhism throughout his empire by erecting pillars that promoted the teachings of the Buddha. This policy was an important factor in ensuring the longevity of Buddhism as a major world religion.
The Maurya Empire fell in 184 BCE as a result of dynastic disputes and invasions by outside enemies. Following a period of political disunity, the Gupta Empire came to power in 320 CE, ruling a portion of North Central India. The founder, Chandra Gupta modeled his rule on that of the Maurya. While the Gupta were able to collect high taxes, demand labor from subjects for state projects, and control metal mining and salt production they were never able to maintain the level of central authority that the Maurya enjoyed. Regional hereditary governors were only nominally under the control of the central government forcing the emperor to rely on diplomacy to maintain the unity of the empire.

Hinduism enjoyed a resurgence during the Gupta period leading to the strengthening of the Caste System and the intensification of patriarchy. The tradition of sati, widows throwing themselves on the funeral pyre of their late husbands, became common. Internal and international trade continued to flourish and major advances in mathematics were realized, including the development of the decimal system, Arabic numerals (wrongly named because of their diffusion to Europe through the Middle East), and pi.

The Gupta Empire fell in the 500s CE largely as a result of nomadic invaders from the northwest.

SSWH2 Identify the major achievements of Chinese and Indian societies to 500 CE/AD.

b. Describe the development of Chinese civilization under Zhou, Qin, and Han.

Fundamental elements of Chinese governance came with the second Dynasty, the Zhou (1027 to 221 BCE). These principles include the Mandate of Heaven which argues that the ruling dynasty has been charged by Heaven to rule the people with benevolence (called the Dao) and Confucianism. While Confucianism did not have a profound political impact until about 200 BCE the basic tenants of filial piety, adherence to tradition, patriarchy and duty were established during the Zhou dynasty. The Zhou were only able to maintain centralized authority until about 800 BCE, after that they relied on a system of feudalism to administer the empire and by 480 BCE civil war thrust China into the Warring States Period. This conflict lasted until the Shi Huangdi emerged victorious and established the Qin Dynasty.

During these years of conflict a new governing philosophy emerged in China called Legalism. Proponents of Legalism argued that humans were innately self-serving and destructive therefore societal order had to be maintained with strict laws and harsh punishments. Shi Huangdi, prescribed to these beliefs and built a highly centralized bureaucracy around these tenants. While the Qin Dynasty was short-lived it is given credit for unifying China politically, economically, and culturally. Under the Qin, weights, measures, coinage, laws, writing, and axle length were all standardized. The state directed the construction of extensive roads and canals, work on the Great Wall of China began, and land reform broke up the power of feudal lords. These reforms laid the foundations for the effective administration of the vast empires of the dynasties that followed.

The extensive use of forced labor and excessive taxation quickly led to rebellion after the death of Shi Huangdi in 210 BCE. Out of these rebellions, a peasant named Liu Bang emerged as the new emperor of China and established the Han Dynasty. The Han Dynasty maintained many of the policies of the Qin but tempered the severity of Legalism with the political use of Confucianism which required leaders to earn the respect of the governed. This combination proved durable and long-lived.

The Han were able to maintain control of an empire even larger than the Qin. From their capital in Chang’an, the Han directed a vast bureaucracy organized into nine ministries and regional authorities.
This bureaucracy was staffed by educated civil servants who received their appointments based on their score on a rigorous civil service examination. The state operated an effective tax collection system, a postal service, built extensive roads, canals, and defensive walls, and protected the empire from the constant threat of nomadic invaders from the north.

The security of the Han period led to a thriving economy that engaged in extensive internal and international trade, profiting tremendously from the export of silk. Economic growth was also aided by advancements in farm technology like the horse collar and better irrigation.

The Han Dynasty began to decline around 200 CE, contributing factors included: bureaucratic corruption and infighting, food shortages, epidemic disease, banditry, and pressure from nomadic invaders along the northern border.

SSWH2 Identify the major achievements of Chinese and Indian societies to 500 CE/AD.

c. Explain the development and impact of Hinduism and Buddhism on India, and Confucianism on China.

Indo-European religious traditions, preserved in the the Vedas, blended with the indigenous traditions of the Dravidian population to create a nascent form of Hinduism. These religious traditions began to formalize around 750 to 550 BCE with the writing of the Upanishads. This faith centered on the basic belief that all living things are reincarnated after death with the quality of the next life based on the deeds (Karma) of the individual in the previous life. Humans are expected to live according to the Dharma and good conduct is rewarded with an eventual release from the cycle of reincarnation called Moksha.

This faith, combined with the dominance of the Indo-European Aryans over the indigenous Dravidians led to the creation of a rigid social class system called Caste or Varna. The population was divided into five hereditary social classes based on ethnicity and occupation.

Hinduism fully developed during the Gupta Dynasty (320 CE to 550 CE). During this period the hereditary nature of the occupational classes of the Caste System, patriarchy, the belief in a pantheon of Gods, a rich tradition of epic literature and the construction of monumental Hindu architecture became commonplace. These traditions, established Gupta Dynasty, endured for centuries among the population of South Asia.

Hinduism’s dominance in the region was challenged by the emergence of new faiths including Jainism and Buddhism in around 500 BCE. While Buddhism had little success in gaining adherents in South Asia it did spread along trade routes and become a major faith in East and Southeast Asia. Buddhism was founded by a Hindu prince named Siddhartha Gautama who rejected the caste system and the pantheon of Hindu Gods and taught instead that spiritual enlightenment (Nirvana) and escape from the cycle of reincarnation could be reached in a single lifetime by accepting the Four Noble Truths and following the Eightfold Path.

In the period after c. 500 BCE Buddhism offered an alternative to the sometimes oppressive nature of Hinduism's caste system and patriarchal traditions. The popularity of Buddhism reached its peak in the Mauryan Dynasty (324-184 BCE) under the Emperor Ashoka. Ashoka made it state policy to promote the spread of Buddhism. These policies ensured that Buddhism would endure as a major world religion. During the Gupta Dynasty (320 CE-550 CE) Buddhism fell out of favor in South Asia but endured as a
major faith along the trade routes in the Indian Ocean and the Silk Road. This endurance was facilitated by the tradition of monasticism in the Buddhist faith. Buddhist nuns and monks established monasteries in remote areas along major trade routes. These monasteries spread the faith among traveling merchants and offered a life free of the traditional confines of patriarchy and caste for both women and men.

Confucius (c551–479 BCE) lived in the waning days of the Zhou Dynasty, a period of social and political upheaval. His philosophy, recorded by his followers in the Analects, proposed a solution to this unrest. He argued that the long established traditions of filial piety and the Mandate of Heaven held the key to social order. For Confucius, the family served as a model for society as a whole. The eldest male of the family held a moral obligation to lead and care for his household with wisdom and benevolence in exchange each member of the family was obliged to obey. Confucius believed that the hierarchy of family could be expanded to bring order to society as a whole. Arguing that humans were innately good and that if treated with respect would obey righteous leaders, the Analects laid out five relationships that were rooted in long held Chinese traditions and would bring peace and order to society. Each relationship was based in reciprocal respect and duty, they include ruler and subject, father and son, husband and wife, older brother and younger brother, and friend and friend. In an ideal Confucian society, wise superiors protect and respect their subordinates, subordinates obey and respect their superiors and all obey the golden rule: “never do to others what you would not like them to do to you.” Confucianism created a fairly rigid social hierarchy, strongly supported patriarchy, encouraged education, and supported the tradition of ancestor veneration in China from the Han Dynasty onward.

SSWH2 Identify the major achievements of Chinese and Indian societies to 500 CE/AD.

d. Explain how geography contributed to the movement of people and ideas, include: Silk Roads and Indian Ocean Trade.

The vast open steppe land of Central Asia was home to numerous nomadic societies. These societies relied on a pastoral economy that exploited the natural resources of the open steppe. This reliance on pastoralism made these societies experts on the use of pack animals including horses, camels and oxen. These transport technologies combined with potential for vast profits from the trade in silk, glassware, cotton cloth, horses, spices, perfumes and slaves led to the rise of the Silk Road. The Silk Road operated in two principle phases, the first from about 100 BCE to 800 CE. In this period the trade route linked the Roman Empire in the west, the Chinese dynasties of the Han, Sui and Tang in the East, the Indian empires of the Mauryan and Gupta in the south, and the Persians in the middle. The Silk Road peaked again from 1200 to 1500 (see SSWH4e).

During the first phase of the Silk Road, it functioned primarily as a relay system with each merchant only traveling a portion of the full length of the road. Major trading cities developed as a result of this system like Chang’an, Samarkand, and Bukhara. While individuals rarely traveled the full length of the trade routes, elements of culture and technology did. Some key examples of this include:
- Buddhism spread from India to China
- Christianity spread to the east
- the stirrup spread from Central Asia to Europe, China, and the Middle East
- horse technology spread to China
- New crops were introduced to China (alfalfa, grapes), Rome (peaches, apricots), and the Middle East (rice, sugarcane, and cotton)
The predictable nature of the monsoon winds of the Indian Ocean eased open-water navigation and led to the rise of a vast network of exchange between East Africa, the Middle East, South Asia, Southeast Asia, and China in the Classical Age. Mariners, motivated by potential profits from the exchange in goods like ebony, ivory, copper, myrrh, frankincense, dates, spices, jewels, cotton cloth, and silk developed technologies that capitalized on the monsoon winds and allowed the efficient transport of massive amounts of goods. These technologies include the dhow and lateen sail developed by Arab sailors and the junk developed by the Chinese.

The seasonal nature of the monsoon winds forced long stays by sailors in their various ports of call. This led to the establishment of diasporic communities in the major ports of the Indian Ocean Maritime System. Several of the diasporic communities left an enduring impact of the host culture. For example the Swahili language of East Africa is a product of the blending of Arabic with indigenous Bantu languages and the Malay Peninsula has a Chinese community that endures to this day.

TEACHER NOTES
WORLD HISTORY

SSWH3 Examine the political, philosophical, and cultural interaction of Classical Mediterranean societies from 700 BCE/BC to 400 CE/AD.

Overview: Students will be expected to explain how the development of the Classical Age societies of the Mediterranean were the product of the interaction between societies in the Middle East, North Africa and Europe. Special attention should be placed on the religious, philosophical, technological and political developments that left an enduring legacy. Focus should be placed on the changes and continuities the region experienced in the transition from small regional states to large multi-ethnic empires.

Resources:
Visit this site to read an article from the UN Chronicle titled “The Mediterranean Sea: Cradle of Civilization”

SSWH3 Examine the political, philosophical, and cultural interaction of Classical Mediterranean societies from 700 BCE/BC to 400 CE/AD.

a. Compare the origins and structure of the Greek polis, the Roman Republic, and the Roman Empire.

In the period around 700 BCE, Greece was divided into several independent and often warring kingdoms. Each king’s power was supported by an army made up of part-time hoplite soldiers who came from the class of small landowning farmers, merchants and artisans. In several of these kingdoms, the hoplites were growing increasingly discontent with the power of their kings. This frustration led to the rise of tyrants in the period from around 650 BCE to 500 BCE. These tyrants promised reforms in exchange for the support of the hoplites. Tyrants successfully overthrew many of the kings and then attempted to establish despotic power for themselves. In most cases this was unsuccessful and the tyrants were themselves overthrown by the hoplites ushering the period of the Greek polis. In the period from about 600 BCE to about 300 BCE Greece was divided into several (again often warring) city-states, called polis. The form of government in each polis varied, with some limited democracies (Athens), some oligarchies (Sparta), and some remaining monarchies.

Of the Greek polis, Athens and Sparta were the most powerful and influential. Political reforms instituted by Solon in 594 BCE and Pericles from 461 to 429 BCE brought Athens its closest to a true democracy. However, at best, only 10% to 15% of the population of Athens was ever allowed to participate in government. Women, the foreign born, and slaves (about 30% of the population) were always barred from participation.

In c. 725 BCE Sparta conquered the neighboring region of Messenia and forced the population into slavery. This population, called Helots revolted in about 650 BCE. This revolt led to a series of reforms that basically turned Sparta into a military state in which all males were expected to spend the majority of their life in military service.
Population growth and limited arable land led many of the Greek Polis to establish colonies around the Mediterranean. This spread Greek culture and political traditions to neighboring people, including the Romans and brought conflict with neighboring empires like the Persians.

In 338 BCE Greece succumbed to invasion by their neighbor’s to the north, Macedonia. While in many ways the Macedonians had a culture unique from the Greeks they envied Greek achievements and thus fancied themselves a part of Greek culture. In 334 BCE Alexander the Great, the Macedonian king, led a combined Greek and Macedonian army to conquer the Persians ushering a brief period empire heavily influenced by Greek culture known as the Hellenistic Age.

Like the early Greeks, the Romans transitioned from a kingdom to a limited representative government to an empire. From about 753 to 507 BCE tradition holds that Rome was ruled by a series of seven kings, the last was a tyrant and thus overthrown by the wealthy landowning class. This event ushered in the period of the Roman Republic (507 BCE to about 88 BCE).
Rome enjoyed a much more hospitable homeland than the Greeks with long growing seasons, fertile soil, vast forest, and rich iron deposits. These advantages help explain how they came to surpass the Greeks in some areas of cultural and political development.

The Roman Republic was made up of two basic social classes, the wealthy patricians and plebeians who constituted a class of laborers and owners of small farms. In the early republic the patrician class maintained almost complete governmental power through its control over the main branches of government: the Senate, assemblies and elected consuls. While plebeians held the right to vote in assemblies their votes counted less than those of patricians. Over time, discontent and rebellion among the plebeians forced reforms that granted them greater but never equal governmental power. This republican government proved highly effective and Rome expanded to control all of the Italian peninsula (290 BCE).

Historians disagree on the exact events that mark the transition from the Republic to the Empire but most agree that the war with neighboring Carthage from 264 BCE to 202 BCE (the Punic Wars) was an important factor. Service in the Roman army and status in the Roman state was largely contingent on landownership. During Rome’s extended conflict with Carthage two key factors emerged to undermine the class of small landowners that made up the bulk of the Roman army. First, extended tours of duty kept men away from their farms and thus unable to plant and harvest forcing their families sell the land to wealthy patricians. Second, expansion brought a flood of cheap slave labor into the republic which made it difficult for soldiers to find work when they returned to civilian life. These factors, plus falling grain prices, caused a vast number of Romans to fall into poverty. Poor unemployed Romans congregated in cities leading to urban unrest. These poor landless Romans no longer qualified for military service thus decreasing the size and strength of the Roman army and making it difficult for the Roman government to maintain order.

While the plebeian class struggled many members of the patrician class accumulated vast personal estates and enormous wealth. These conditions proved ideal for power hungry opportunist who could use their personal wealth to win the loyalty of Rome’s poor. Men, like Julius Caesar, built private armies and Rome quickly fell into a series of civil wars that lasted from 88 to 31 BCE.
By the time the wars ended in 31 BCE few elements of the republican form of government survived. The vast majority of governmental power now rested with an Emperor, of which Caesar Augustus was the first. The Senate survived only to give advice to the Emperors and citizen participation in government was only allowed on the local level. Rome was now an Empire.

The Roman Empire continued to expand, incorporating most of Europe and parts of the Middle East and North Africa. It was administered by an extensive bureaucracy working through a network of cities linked by paved roads. Cities served as provincial capitals with local governors that each reported to the emperor in Rome. From about 31 BCE to 235 CE the empire prospered in a period termed Pax Romana. Peace, order, and elaborate infrastructure including paved roads and aqueducts facilitated trade, cultural exchange, technological development and the arts.

SSWH3 Examine the political, philosophical, and cultural interaction of Classical Mediterranean societies from 700 BCE/BC to 400 CE/AD.

b. Identify the ideas and impact of important individuals, include: Socrates, Plato, Aristotle, Alexander the Great, Julius Caesar, and Augustus Caesar.

Socrates was an Athenian philosopher and teacher who lived from 470 to 399 BCE. He argued that there were no absolute standards for truth and justice and encouraged his students to question their assumptions, values and opinions. To accomplish this he developed a teaching method in which he would ask students a series of leading questions, now called the Socratic Method. In doing this, he challenged students to think for themselves rather than accept traditional understandings of the world. His work proved to be too much for Athenian authorities; in 399 BCE Socrates was sentenced to death for corrupting the youth of Athens.

Plato (427 to 347 BCE) was one of Socrates’ students and is responsible for recording many of his teachings. Plato continued and expanded the philosophical work of Socrates by encouraging rational thought. This is perhaps best exemplified by the cave allegory found in his most famous work The Republic, published in 370 BCE. In this brief passage, Plato compares the traditions and superstitions that most people rely upon to understand the world as shadows of the real truth. Plato’s The Republic dominated was the dominant philosophical work for 1,500 years.

Aristotle (384 to 322 BCE) attended Plato’s school the Academy and went on to found his own school called the Lyceum after Plato’s death. Aristotle worked to collect and categorize all of the knowledge from a wide variety of disciplines including politics, philosophy, ethics, poetry, physics, astronomy, meteorology, zoology, and psychology. Aristotle’s work laid the foundation for the modern study of many of these disciplines.

Alexander the Great was a pupil of Aristotle when he was the prince of Macedonia. His father, Philip conquered and unified Greece in 338 BCE but died shortly afterwards. In 336 BCE Alexander became the king of Macedonia and in 334 BCE announced that a unified force of Greeks and Macedonians would invade the Persian Empire ostensibly to extract revenge for the Persian invasion of Greece in 480 BCE. By 326 BCE Alexander’s armies had defeated the Persian Empire, taking control of the Middle East and Egypt and crossed the Indus River in northern India. In his wake, Alexander left a series of new cities inhabited by a mix of indigenous peoples and Greek colonists. Alexander died at 32 years old in 323 BCE without an heir. His generals wrangled over the empire, eventually dividing it among themselves. While the political unity of the empire Alexander created was short lived the cultural legacy endured for...
centuries as Greek culture blended with indigenous traditions across the Middle East and South Asia. This blending, termed the Hellenistic Synthesis by historians, ushered in an age of vibrant cultural exchange in scholarship, the arts, and literature.

Julius Caesar took advantage of political and economic instability after the Punic Wars to undermine the government of the Roman Republic and accumulate power for himself. In 60 BCE he unified with two other powerful and ambitious Romans to form the first triumvirate. These three men dominated the government of the Republic for ten years. During this time, Julius Caesar utilized his military genius to conquer all of Gaul (modern France) for the Romans. His success worried the other members of the triumvirate and the Roman Senate. These fears were well founded as Caesar’s soldiers were deeply loyal and he was enormously popular among the people of the Roman heartland. In an attempt to control Caesar, the Roman Senate ordered him to disband his armies and return to Rome. Instead, Caesar marched on Rome with his troops, crossing the Rubicon River in 49 BCE, easily taking the city of Rome. By 44 BCE, Caesar defeated his political rivals and pressured the Roman Senate to name him dictator for life. Many historians mark this as the end of the Roman Republic and the beginning of the Roman Empire. In March of 44 BCE members of the Roman Senate assassinated Caesar in an attempt to restore the republic.

Augustus Caesar, began his life as Octavian. He was the adopted son of Julius Caesar and with two other supports of Julius Caesar seized power in Rome after the assassination of his father. This Second Triumvirate ruled Rome for ten years. But, like its predecessor, it fell apart because of political ambition and jealousy. Octavian managed to force one member into retirement and defeated the other in a civil war leaving complete control of Rome in his hands. In 27 BCE Octavian accepted the title Augustus “exalted one” and became Rome’s first emperor, ruling as Augustus Caesar until his death in 14 CE. Many historians mark the ascension of Augustus Caesar as the beginning of a period called Pax Romana. This 207 year long period is considered the high point in Roman political, economic and cultural dominance.

SSWH3 Examine the political, philosophical, and cultural interaction of Classical Mediterranean societies from 700 BCE/BC to 400 CE/AD.

c. Analyze the impact of Greek and Roman culture, politics, and technology.

The classical age Greeks and Romans laid many of the political foundations for the modern western world. The Athenian and Roman approach to governance that allowed at least a portion of the population to participate as citizens rather than simply obey as subjects served as an inspiration to the Enlightenment thinkers of the 18th century. French and English philosophers found inspiration in the writings of the Greeks and Romans during the European Enlightenment and this ultimately led to the emergence of modern participatory democracy. Roman law codes survived in Europe long after the collapse of the empire, serving as the starting point for the development of many modern European law codes.

The Greeks and Romans also left a wide and long-lived cultural legacy. Humanism and rational philosophy, developed in Greece and explored further in Rome served as the intellectual foundation of the European Renaissance and Scientific Revolution. It has since become an important element of modern educational systems around the world. This legacy is apparent in the use of the term humanities as a category of study, the endurance of Latin as discipline, the ubiquity of Greek and Roman literature in modern curriculum and the scientific method whose origins are found at Aristotle’s Lyceum. This cultural legacy serves as a unifying force in the modern western world. Greek and Roman contributions to science and engineering also diffused to the Arab world where they were key in the development of navigational technologies that spurred the Age of Exploration.

The endurance and sophistication of this legacy was a product of Greece and Roman’s security and longevity as classical age states. This security and longevity was, in part, a product of advanced technologies developed within these states. Greek and Roman engineers developed technique for the construction of monumental architecture, irrigation and municipal water systems, and roads that contributed to a prosperous and cosmopolitan society. This prosperity facilitated the development of sophisticated scholarship that endured much longer than the states themselves.

d. Describe polytheism in the Greek and Roman world.

The Greeks and the Romans worshipped a pantheon of gods and goddess that resembled humans both physically and emotionally. Each god and goddess represented an important aspect of Mediterranean life like love, wisdom, the sea, and war. The Greeks and Romans believed that the gods and goddess confronted many of the same emotions as humans and as such engaged with each other and humanity in complex and often troublesome ways. These beliefs led to the development of a rich mythological literary traditions. Attempts to appease the gods and goddess also led to the construction of monumental architecture like the Parthenon in Athens and the Pantheon in Rome and the development of complex state run rituals that helped justify the power of the government. While Roman religion was largely a product of cultural diffusion from Greece, it did develop some unique attributes. Roman emperors were often deified after death and in a few cases emperors added loved ones to the pantheon gods. For example, the Emperor Hadrian ordered the deification of his close companion Antinous after his death in 130 CE.

SSWH3 Examine the political, philosophical, and cultural interaction of Classical Mediterranean societies from 700 BCE/BC to 400 CE/AD.

e. Explain the origins and diffusion of Christianity in the Roman world.

Christianity developed in the Jewish community of Roman controlled Palestine. Jesus of Nazareth was born to a humble Jewish family and became a traveling teacher as an adult. He preached a message of reform that argued that charity and compassion were more important than strict obedience to rabbis and Jewish customs. With time, Jesus developed a devoted following that believed he was the messiah foretold in Hebrew prophecy. This developed into a belief that Jesus was the Son of God. While the teachings of Jesus Christ were popular among some of the common people of Palestine it was a direct threat to the power and influence of the traditional Jewish leadership and the Roman state. Pressured by Jewish religious leaders, the Roman governor of Palestine ordered the arrest and execution of Jesus. After the crucifixion, the disciples of Jesus preached of his resurrection from the dead and ascension to Heaven. The resurrection served to prove the divinity of Christ to his followers.

While Christianity only had a limited appeal to the Jewish community of Palestine, it found much greater acceptance among the Gentile population of the Roman Empire, particular among oppressed groups like slaves, commoners and women. This was in large part thanks to the work of Paul who was among the first to take the teachings of Christ to the Roman heartland. While the Roman government continued to see Christianity as a threat and persecuted Christians, the community became increasingly organized thanks to the work of disciples like Peter who established the first formal centers of worship that would over time evolve into the Roman Catholic Church.

In 313 CE the Roman Emperor Constantine converted to Christianity and issued the Edict of Milan that legalized Christianity in the empire. With imperial support, Christianity grew quickly to become the dominate religion of Europe.

f. Analyze the factors that led to the collapse of the Western Roman Empire.

In 235 CE the stability of the Roman Empire came to an end and the empire entered a period known as the Third-century Crisis. From 235 to 284 Roman suffered from a series of weak and short-lived emperors, invasions, economic depression, and social unrest. This led the Emperor Diocletian to institute a series of radical reforms including dividing the empire in half with two rulers. These reforms were effective for a time but by 476 the western half of the empire succumbed to invasion by Germanic tribes, leaving the eastern half (known as the Byzantine Empire by historians) to carry on Roman traditions.

SSWH4 Analyze impact of the Byzantine and Mongol empires.

Overview: Students will be expected to explain how the Byzantine and Mongol states impacted both the regions they directly controlled and surrounding societies. Special attention should be placed on the religious, economic, technological and political developments that left an enduring legacy. Focus should be placed on the transregional nature of these empires and the cultural interactions that they facilitated.

SSWH4 Analyze impact of the Byzantine and Mongol empires.

a. Describe the relationship between the Roman and Byzantine Empires, include: the importance of Justinian and Empress Theodora

In the waning days of the Roman Empire, Emperor Diocletian enacted reforms that laid the foundation for the creation of a successor state to the Roman Empire, the Byzantine Empire. Diocletian believed that the empire had grown too big and complex for a single man to administer so he divided it into the Latin speaking west and Greek speaking east with a capital in the city of Byzantium. Constantine took power after Diocletian in 312 CE and reunified the empire but moved the capital of the unified Roman Empire to Byzantium, renaming the city Constantinople after himself. At this point Constantinople was considered the New Rome and contemporaries simply viewed this move as a political reform. However, many historians see this and subsequent events like the loss of Constantinople’s control of the western province in 395 and the final sack of Rome by Germanic tribes in 476 as the beginning of a new state in the Mediterranean world.

While the Roman Empire that lasted from about 27 BCE to 476 CE shared a great deal with its successor state, the Byzantine Empire (about 395 to 1453) most historians argue that the differences make the Byzantine Empire a distinct state in world history. Some important Roman traditions did survive however. Roman political institutions like the Senate continued in the Byzantine world as did the basic structure and content of Roman law. However, culturally the Byzantine Empire was distinct. The Byzantine Empire spoke Greek and was officially a Christian state for preponderance of its history.
In 527 the Emperor Justinian came to power. An ambitious emperor, Justinian was determined to restore the glory of the old Roman Empire. His first task was to retake the lands lost to Germanic tribes in North Africa and Western Europe. After a series of successful military campaigns much of the former territory of the Roman Empire was in the hands of Justinian. His hold on the lands in Western Europe was tenuous at best, and changed hands six times in 16 years.

Back in his capital of Constantinople, Justinian instituted major legal reforms that included the organization, simplification, and standardization of Roman law. This project produced Corpus Juris Civilis or Justinian’s Code. A law code that regulated almost all aspects of Byzantine life for the next 900 years and served as the foundation of many of the law codes of Western Europe after the fall of the Byzantine Empire.

Justinian also completed massive infrastructure projects that transformed Constantinople into a vibrant and thriving metropolis. These included the construction of a 14 mile long city wall, public baths, aqueducts, law courts, schools, hospitals and churches. Justinian’s most significant architectural legacy was the construction of the Hagia Sophia, a massive church that symbolized the partnership between the church and state in the Byzantine world.

At his side during all of this was his powerful and influential wife Theodora. Born into a humble circus family, the law actually had to be changed to allow the emperor to marry someone so far below his status. Theodora was a true partner in power, she meet with foreign envoys, passed laws, built churches, and served as the emperor’s backbone during the violent Nika riots in 532. According to the historian Procopius, Justinian was ready to abandon the throne when rioters swept through the streets demanding his ouster. Procopius credits Theodora with convincing him to stay and suppress the rebellion.

SSWH4 Analyze impact of the Byzantine and Mongol empires.

b. Analyze the impact Byzantium had on Kiev, Moscow, and the Russian Empire.

Political unity came to Russia in about 862 when Scandinavian Vikings, called Varangians unified the Slavic peoples and founded the city of Novgorod. In 880, the opportunity for lucrative trade with Byzantium by way of the Dnieper River led the Varangian princes to move their capital south to Kiev. This led to regular economic and cultural contact between the two states. According to principle source on early Russian history, The Primary Chronicle, Prince Vladimir (980 to 1015) decided to seek out a new faith for his people, he sent envoys to investigate the options. The envoys that visited the Orthodox Christians of the Byzantine Empire returned with grand tales of monumental architecture that made them feel that God must dwell among the Byzantines. These stories may have contributed to Vladimir’s decision to order the mass baptism of his people in 989. This conversion ushered in an era of close cultural ties between the Kievan state and Byzantium. This connection led to regular economic and intellectual exchange as well as the adoption of the Cyrillic alphabet which had been developed earlier by Byzantine missionaries working to convert the Slavs of Eastern Europe.

Kiev’s power declined after the Mongol invasion (discussed in SSWH4e) leading to the rise of Moscow as the new center of political power. This corresponded to the decline and collapse of the Byzantine Empire in the late 1400s. The Russian ruler Ivan III used this to his political advantage by announcing publicly that Russia would be the “Third Rome” and claiming for himself the title Czar a slavicization of the Caesar. This claim became an enduring form of political legitimacy in the Russian Empire.

SSWH4 Analyze impact of the Byzantine and Mongol empires.

c. Explain the Great Schism (East-West Schism) of 1054 CE/AD

By the late 300s Christendom developed two parallel hierarchies of leadership that reflected the growing political divide in the Roman Empire. In the west the church was headquartered in Rome and led by the pope. In the East, the Byzantine Emperors claimed leadership of the church and considered the Patriarch of Constantinople as the highest member of the church clergy. Each of these leaders, the pope in Rome and the emperor in Constantinople, considered themselves the head of a single unified church and thus believed that they held authority over the other.

Lack of communication and distance between the two capitals kept the peace for about 300 years but in 730 this dispute over leadership came to a head. The Byzantine Emperor Leo III banned the use of icons in worship because he believed that their use was a form of idolatry. Riots and clerical rebellion ensued, leading Pope Gregory II to side with the supporters of icons thus undermining the authority of the Byzantine Emperor and creating enduring animosity. Anger grew between Rome and Constantinople after 751 when the pope was facing an invasion by the Lombards. He requested help from the Byzantine Emperor but the emperor refused the request leading the pope to turn to the Franks for help. In gratitude for this and later support from the Franks in suppressing rebellions in Rome, Pope Leo III crowned Charlemagne the Roman Emperor. This title was a direct affront to the Byzantine Emperor who considered himself the Roman Emperor and the pope his subordinate. By the mid-1000s the situation became untenable, arguments over Church ritual ranging from the type of bread used for communion to clerical marriage ruined relations between the east and the west. In 1054 the controversy culminated in the excommunication of the Patriarch of Constantinople by Pope Leo IX. This formally severed the ties between the Christian Churches of the east and west leading to two independent churches, the Eastern Orthodox Church and Roman Catholic Church.

http://orthodoxinfo.com/general/greatschism.aspx
SSWH4 Analyze impact of the Byzantine and Mongol empires.

d. Explain the decline of Byzantium and the impact of the fall of Constantinople in 1453 CE/AD.

The fall of the Byzantine Empire was precipitated by a very slow decline that began in the sixth century after the Bubonic Plague struck. The empire’s population gradually shifted away from urban areas leading to less centralized leadership and the inability to resist growing Muslim power in the region. During the seventh century Muslim armies took considerable territory including Alexandria, Antioch and Jerusalem. In addition to the threat from Arab Muslims, the Byzantine Empire also faced threats from Turks and Slavs in this period. In the eleventh century, Turkic armies united under Seljuk leadership presented a serious threat to Byzantine power in the region and inspired the Western European Crusades. While the declared target of the majority of Western European Crusades was the Muslim rulers of Jerusalem, the Fourth Crusade in 1204, sacked and destroyed much of the capital of the Byzantine Empire, Constantinople. The reasons for this Christian Crusade against Christians was complicated but include a desperate need for financing and lingering resentment over the Schism of 1054. In many ways the Crusaders sack of Constantinople in 1204 served as the death blow to the empire. For the next two hundred years the empire struggled with the loss of territory to a new regional power, the Ottoman Turks, civil war, and another outbreak of the plague. This decline culminated in the final fall of Constantinople to the Ottoman Turks in 1453.

The fall of Constantinople to the Turks opening the door to Turkic Muslim expansion in the Middle East, North Africa and Southeastern Europe. With control of Constantinople, now called Istanbul, the Ottoman Turks held the Bosporus Straits, an essential location for the transport of goods and people between Asia and Europe. This strategic advantage, along with the military innovations of the Ottoman Sultans allowed the growth of a new powerful Muslim empire in the region. Additionally, with Constantinople under the control of Muslims, the center of Christian Orthodoxy shifted north to Russia.

Siege of Constantinople, Chronique de Charles VII by Jean Chartier
SSWH4 Analyze impact of the Byzantine and Mongol empires.

e. Describe the impact of the Mongols on Russia, China, and the Middle East, include: the role of Chinggis (Genghis) Khan in developing the Mongol Empire.

The Mongols were a nomadic pastoral society with a homeland on the vast Central Asian steppe. Originally a loose confederation of tribes, they were united by Chinggis Khan in 1206. As a united force, the Mongols proved almost unstoppable. Technologies like the Central Asia composite bow which could shoot one-third farther than any of their rivals and the willingness to adopt the technologies of conquered peoples (like the catapult from the Chinese) were one important element of their success. Another was their nomadic lifestyle. Nomadism made the Mongols expert horsemen and incredibly self-sufficient. Unlike the armies of sedentary agricultural societies that required long supply lines to feed and equip soldiers, the Mongols brought virtually their entire society with them on military campaign, including families and livestock. This practice ensured that supply lines remained short and allowed armies to travel vast distances for extended periods of time. Additionally the centralized command structure developed by Chinggis Khan and advanced military tactics that capitalized on the greater mobility of Mongol forces contributed to success. This success was rapid, by 1227, the year of Chinggis Khan’s death, the Mongols controlled northern China and most of Central Asia. After his death, his sons including Ögödei, continued the conquests. By 1279 the Mongol Empire included Russia, China, the Middle East and Central Asia.

When the Mongols invaded Russia, it was ruled by a loosely unified group of princes with most of the power concentrated in the city of Kiev. This loose confederation failed to unify in the face of the Mongol threat and as a result it was easily conquered. Southern princes in the city of Kiev offered the strongest resistance and as a result were largely eliminated. Northern princes in and around Moscow and Novgorod were more cooperative with the Mongols and as a result power in the region shifted north to Moscow as the Muscovite princes became agents of the Mongol Khanate of the Golden Horde that now ruled Russia. The Mongol rulers of Russia were mostly concerned with extracting tribute and profiting from trade along the Silk Road so they left much of the administration of the Khanate to Muscovite princes who served as local administrators, tax collectors and census takers. The Mongol tax burden was severe and led to an economic downturn which was made worse by the introduction of paper money to the economy by the Mongol overlords. To reinforce the power of the Mongols and their agents, Russian princes, the leaders of the Golden Horde provided generous support for the Russian Orthodox Church. This patronage secured Orthodoxy as the dominant faith of Russia. Further, the use of Russian princes supported by the Orthodox Church also served to centralize political power in the hands of Muscovite princes, which up till this point had been quite fragmented in the Russian State. With centralized political power now in Moscow, the population of Russia began to migrate north leading to the opening of new agricultural lands in the region.
Unlike the Mongols of other regions, the Mongols of China thoroughly integrated themselves into Chinese society, establishing a short lived but impactful dynasty, the Yuan. The Mongols of China adopted many Chinese cultural traditions including Confucianism and Buddhism but also left an enduring cultural imprint. For example, Mandarin, the dominant spoken language of Northern China is a hybridization of Mongolian and Chinese. Further, Mongol power acted to finally unify China into the state it is today, breaking down old cultural differences and laying the foundations for the modern Chinese Nation-State. Beijing became the capital under the Yuan dynasty and early construction on the Forbidden City began. The Mongols also facilitated intellectual and economic diversification. Under Mongol rule the government was largely controlled by Mongol overlords aided by a bureaucracy of Central Asian and Middle Eastern administrators. This brought foreign expertise into China aiding scientific advances. The exclusion of Chinese nobility from their traditional role as bureaucrats forced many families to become merchants. This facilitated the development of corporate business arrangements and urbanization. However, like Mongols in other regions, the Mongols of the Yuan instituted economically repressive taxes on the population made worse by the introduction of paper money which in time led to their decline.
Like the Mongols of the Golden Horde of Russia, the Mongols of the Il Khan that dominated the Middle East preferred to rule from afar. Despite this, the Il Khan had a profound impact on the Middle East. Mongolian armies tended to assume power in a region by killing much of the local nobility, this was certainly true of the Middle East and included the execution of the last Abbasid Caliph. While this would not be the last person to claim the position of Caliph, if would be a major blow to the unifying power of the position in the Muslim world. After this execution, future Caliphs would have little success claiming authority over all of Dar al-Islam. Mongol rule however, would place Baghdad at the heart of a vast and vibrant empire spanning almost all of Asia. Baghdad was already an important intellectual center among Arabs and Persians but with Mongol sponsorship, intellectuals from all over Asia concentrated in the city. This led to major developments in the disciplines of history, painting, algebra, trigonometry, and astronomy that led to advances in calendars, predicting eclipses, and navigation. But, like all regions controlled by the Mongols, over taxation made worse by the introduction of paper money led to economic decline.

All of the regions controlled by the Mongols benefited from a massive expansion in Eurasian trade along the Silk Road. This trade facilitated the diffusion of profoundly important technologies like gunpowder, paper, and movable type. It facilitated the spread of religions like Christianity, Islam and Buddhism. It vastly improved interregional understanding by facilitating the travels of people like Marco Polo and Ibn Battuta and it profoundly transformed the demography of Afro-Eurasia with the spread of the Bubonic Plague.

TEACHER NOTES
WORLD HISTORY

SSWH5 Examine the political, economic, and cultural interactions within the Medieval Mediterranean World between 600 CE/AD and 1300 CE/AD.

Overview: Students will be expected to explain how the development of the Medieval Muslim societies of the Mediterranean, were the product of the interaction between societies in the Middle East, North Africa, Europe and beyond. Special attention should be placed on the religious, economic, cultural and political developments that left an enduring legacy. Focus should be placed on the changes and continuities the region experienced during the expansion of Islam with particular attention to the role of Judaism and Christianity in Islam.

Resources:
Visit this University of Massachusetts website to read an article written by Bethany G. Power on the emergence and expansion of Islam.
http://people.umass.edu/educ613/WorldhistoryI/WHI.3.html

SSWH5 Examine the political, economic, and cultural interactions within the Medieval Mediterranean World between 600 CE/AD and 1300 CE/AD.

a. Analyze the origins of Islam and the growth of the Islamic Empire.

In 600 CE the northern portion of Middle East was dominated by the Christian Byzantine Empire and the Zoroastrian Sassanid Persian Empire. The Arabian Peninsula lacked any centralized political authority and was dominated by independent Arab tribes that profited from a lucrative trade route that transported frankincense and myrrh from southern Arabia and East Africa to the Byzantine and Sassanid Empires. In 570 Muhammad was born in a prosperous trading town along this trade route, Mecca. Mecca also served as an important pilgrimage site for the polytheistic Arabs as it was home to an important temple to these gods, the Ka’ba. As an adult, Muhammad had a lucrative career as a merchant and eventually married a wealthy widow, Khadijah. Financially secure, Muhammad now turned to spiritual pursuits which included meditating in the mountain caves outside of Mecca.

In about 610, Muhammad began to have visions while meditating. He came to believe that these visions were the Angel Gabriel who had been charged by the one true God (Allah in Arabic) to deliver a
message to Muhammad. The message delivered in these revelation outlined the basic beliefs of Islam and were eventually recorded in the Quran. While Muslims believe that the Jewish and Christian holy books contain religious truth, only the Quran contains the exact words of God. These basic beliefs of Islam (outlined in the Six Articles of Faith) include the belief in one God that created all of things. Muslims believe that God sent a series of messengers (prophets) including Noah, Abraham, Moses, and Jesus. Each prophet delivered a divine message which is preserved in the Books of God, these include the Torah, Gospels, Psalms, and Scrolls. According to Islam, Muhammad is God’s final messenger and he has delivered God’s exact words in the form of the Quran. In addition to the Quran and Books of God, Muslims look to the words and deeds of the Prophet Muhammad for guidance. These traditions of Muhammad are found in the Hadith and Sunnah. Additionally, basic practices of Islam are outlined in the Five Pillars of Islam and over the course of many hundreds of years, Muslim scholars have used these various sources of religious truth to compile the Shariah or Islamic law that regulated public and private affairs in the Muslim states.

Muhammad began to share his message with the people of Mecca after 610. The message was not well received as it threatened Mecca’s traditional role as a pilgrimage destination for the polytheistic Arabs. Facing hostility in Mecca, Muhammad led his followers to the city of Medina in 622. Most of the population of Medina accepted Muhammad as the Messenger of God and converted to the new faith. The Meccan migrants and the converts of Medina, unified under a single faith, now formed the Umma, a political and religious union led by Muhammad. The conflict with the city of Mecca continued until 630 when the armies of the Umma successfully defeated Mecca. After this defeat, the Umma led by Muhammad continued to expand and by his death in 632, most of the Arabian Peninsula was unified under the authority of the Umma.

After Muhammad’s death leadership of the Umma passed to a successor called a caliph in Arabic. Under the first four caliphs, the Umma now known as a caliphate continued to expand. By 661, the caliphate included all of the Arabian Peninsula, Persia, Palestine, and Egypt. While the political authority of the caliphate expanded rapidly, religious conversion proceed very slowly. A civil war broke out in the caliphate in 656 (the details of this conflict will be discussed in the notes for element b) this resulted in a power shift to a new dynasty of caliphs, the Umayyads who ruled from 661 to 750 (Umayyad caliphs remained in power in Spain until 1031). Under the Umayyads the caliphate expanded to include all of North Africa, the Iberian Peninsula and parts of Central Asia. The Umayyad government and army was dominated by Arabs, however the empire was ethnically diverse. This discrepancy led to unrest and in 750 the Umayyad dynasty was overthrown and replaced with the Abbasid Caliphate which held the position until the last Abbasid Caliph was killed by the Mongols in 1258. The Abbasid caliphs were never able to maintain the level of political unity or centralized authority of the Umayyads. Abbasid
authority never extended to Iberia and by 969 a rival caliphate, the Fatimids controlled Northern Africa and parts of Palestine and the Arabian Peninsula.

SSWH5 Examine the political, economic, and cultural interactions within the Medieval Mediterranean World between 600 CE/AD and 1300 CE/AD.

b. Understand the reasons for the split between Sunni and Shi’a Muslims.

While alive, Muhammad never established a plan for leadership of the Umma after his death. The first three caliphs were selected from among his close companions and generally ruled without controversy until 656 when rebels from the army assassinated Uthman, the third caliph. The assassins then nominated Ali, a relative of Muhammad for the position. Many in the community believed that Ali was Muhammad’s legitimate heir because of sermon delivered by the Prophet at Ghadir al-Khumm in which he alluded to Ali as leader. Ali accepted the position of caliph but he faced a challenge from two of Muhammad’s close friends and his favorite wife A’isha. This challenge resulted in the Battle of the Camel from which Ali emerged victorious. However, after the battle Ali faced another challenge from a relative of the slain Uthman, the Syrian governor Mu’awiya. This led to more armed conflict but this time the battles were inconclusive. Ali and Mu’awiya agreed to negotiate a truce. Some of Ali’s followers, aggravated by his willingness to negotiate, assassinated him in 661. The assassination of Ali cleared the way for Mu’awiya to assume the position of caliph and establish the Umayyad Caliphate. However, Ali’s son Husayn revolted in 680 hoping to reestablish his family’s right to rule. The Umayyad caliph ordered Husayn and his family massacred. The violent death of Husayn made him a martyr to his followers who broke away and formed the Shi’a branch of Islam while the supports of the Umayyads became known as the Sunni.

SSWH5 Examine the political, economic, and cultural interactions within the Medieval Mediterranean World between 600 CE/AD and 1300 CE/AD

c. Assess the economic impact of Muslim trade routes to India, China, Europe and Africa.

The Islamic world laid at the heart of four of the world’s major trade routes in the period from 600 to 1300. The stability offered by vast the Islamic caliphates fostered the growth of these trade routes and the economic prosperity of the regions they connected. These trade routes include the Mediterranean, trans-Saharan caravan route, Silk Road, and the Indian Ocean maritime system. Together these interconnected routes linked the manufactures, mines and markets of China, Southeast Asia, India, East Africa, the Middle East, Central Asia, West Africa, and Europe. The trade on these routes include the exchange of key commodities like silk and porcelain from China, spices and textiles from South and Southeast Asia, ivory, slaves, and gold from Africa, glass from Europe, and metalware, slaves, and textiles from the Middle East. This trade was facilitated by technological advances. The Arab dhow made travel in the Indian Ocean easier; it was equipped with a triangular lateen sail that increased the ship’s maneuverability. Arabian camel saddles that diffused to North Africa improved the security and efficiency of trans-Saharan trade. The common moral code that Islam offered also promoted the growth of trade in the region. Taken together, these Afro-Eurasian trade routes that meet in the Muslim world spurred the entire region’s economic growth. This growth is evidenced by the increased prosperity in major trading cities like Timbuktu, Mombasa, Alexandria, Constantinople, Venice, Hormuz, Baghdad, Melaka, Calicut, Canton, and Hangzhou among others.

SSWH5 Examine the political, economic, and cultural interactions within the Medieval Mediterranean World between 600 CE/AD and 1300 CE/AD

d. Identify the contributions of Islamic scholars in science, math, and geography

Two key factors intercepted in the period 600 to 1300 to make the Islamic world a center of learning. First, the Islamic world was at the intersection of Afro-Eurasia’s major trade routes, this fostered a cosmopolitan atmosphere were intellectuals from different regions could meet and exchange ideas. Early scholarship from Greece and Rome was translated, preserved and improved upon. Indian mathematics including the number system that becomes known as Arabic numerals in the West was applied to the development of algebra. Chinese paper making technology allowed the creation of vast libraries and Chinese technologies related to navigation, astronomy, and gunpowder were refined. These refinements would eventually facilitate the age of exploration in Europe. Second, the expectation that all believers read the Quran promoted literacy in a universal language, Arabic, and the establishment of an extensive educational system. Baghdad, Damascus, Cordoba, and Timbuktu among other cities became what we might call university towns in modern parlance. This intellectual development was centered on the madrasas, a religious college were scholars studied many disciplines of learning. In the field of science, Ibn Sina authored Canon of Medicine. This work became the authoritative medical text in the Middle East and Europe until the 1600s. In the field of geography, Ibn Battuta’s Travels vastly improved knowledge of cultural and physical geography in the Islamic world and beyond.

e. Analyze the relationship between Judaism, Christianity, and Islam.

Judaism, Christianity and Islam developed in succession with Christianity developing out of Judaism and Islam developing out of both Judaism and Christianity. As a result of this common heritage the three faiths share several key features.

First and most important, Judaism, Christianity and Islam are monotheistic religions that believe in an all-powerful God that created the world and everything in it. They all believe that this God is benevolent, trustworthy, and just. In all three faiths, humanity is directed to follow God’s will; those who obey are rewarded and those who do not are punished.

Next, the three faiths believe in divinely directed messengers, humans who bring God’s message to the people. These messages direct people’s actions and beliefs and for all three faiths they are preserved in Holy Scripture. Judaism, Christianity and Islam share several of these messengers including, among others, Abraham, Noah, and Moses. Christianity and Islam also share John the Baptist and Jesus, however Islam does not recognize Jesus as a Messiah while Christianity does.

Judaism, Christianity and Islam also share some scripture. While the value placed on this scripture varies from faith to faith, all three recognize much of the content of the Torah as religious truth. Christianity and Islam also share much of the New Testament of the Bible.

The faiths also share a common spiritual geography in the city of Jerusalem. All three faiths consider Jerusalem profoundly important as a holy place.

TEACHER NOTES
WORLD HISTORY

SSWH6 Describe the diverse characteristics of early African societies before 1500 CE/AD.

Overview: Students will be expected to describe the development of African societies with a focus on the role of trade in fostering growth and cultural exchange. Special attention should be placed on the religious, economic, and political developments that left an enduring legacy and contributed to the diversity of the continent. Teachers should stress that Africa’s size and geography contributed to a high degree of diversity on the continent.

SSWH6 Describe the diverse characteristics of early African societies before 1500 CE/AD.

a. Describe the development and decline of the Sudanic kingdoms (Ghana, Mali, Songhai); include the roles of Sundiata, and the pilgrimage of Mansa Musa to Mecca.

States emerged in West Africa with the arrival of the domesticated camel in third century CE. With the camel as a beast of burden and war, lucrative trade developed across the Sahara Desert. Salt and manufactured goods were transported south and gold, kola nuts, and forest products were transported north. Merchants meet in the Sahel region just south of the Sahara Desert. This region was inhabited by the Soninke, and agricultural people ruled by a warrior chief called the gana. The gana grew wealthy and powerful by taxing this trade and by the 700s the gana was a king and his title was used to describe the entire region. The Kingdom of Ghana, as it was now known, developed an extensive bureaucracy that allowed it to tightly regulate the highly lucrative salt and gold trade. This control, allowed the kings of Ghana to acquire vast wealth which they used to develop the military power necessary to become an empire in the 800s. Trade brought Islam to the region which spread slowly eventually leading to the conversion of the king in the eleventh century. In 1076 Almoravids from North Africa conquered Ghana and severally disrupted the salt and gold trade. The Kingdom of Ghana was unable to recover despite the withdrawal of the Almoravids.

With Ghana’s power severally reduced a new group of people emerged to dominate the region, the Malinke. New gold mines opened to the east, out of the reach of Ghana but easily accessible to the Malinke. The ruler of the Malinke, Sundiata, used this new found wealth to build an empire to replace Ghana. After a series of military victories, Sundiata established the Empire of Mali in around 1235. This empire was much larger than its predecessor and much more Islamic in character. Sundiata established his capital at Niani; from here he directed a highly effective bureaucracy that instituted successful reforms that promoted agriculture and the reestablishment of the salt and gold trade. The empire generally prospered for the rest of Sundiata’s reign but after his death in 1255 it slipped into a 50 year period of turmoil. Order was restored in 1312 when Mansa Musa took power. A highly effective administrator and military leader, Mansa Musa substantially increased the size of the empire. To administer this enlarged empire, Mansa Musa divided it into provinces with appointed governors. Mansa Musa also created important links between his empire the larger Muslim world. In 1324, Mansa Musa took a pilgrimage to Mecca. While traveling, he recruited Islamic scholars to return with him to Mali. With the help of these
scholars and the vast wealth from the salt and gold trade, Mansa Musa transformed the city of Timbuktu into a center of Islamic scholarship. After Mansa Musa, Mali had a series of weak and ineffective leaders leading to its decline. In 1433 the city of Timbuktu was sacked by Tuareg invaders and by 1500 the Malinke controlled only their homeland.

The Songhai people stepped into the power vacuum left by the decline of Mali. Like Ghana and Mali, the Songhai used the wealth from the salt and gold trade to build a vast Islamic empire in 1464. This wealth paid for a highly effective professional military equipped with cavalry and freshwater naval units. The Songhai Empire surpassed Mali in size. To administer this territory the emperor established a highly centralized bureaucracy with ministries of the treasury, army, navy and agriculture. Technological advances made in the heart of the Islamic world proved to be Songhai’s undoing. Gunpowder diffused across the Silk Road and Muslim armies in the Middle East weaponized it. In 1591 a Moroccan army equipped with cannon and muskets invaded and defeated Songhai.

SSWH6 Describe the diverse characteristics of early African societies before 1500 CE/AD.

b. Describe the trading networks and distribution of resources by examining trans-Saharan trade in gold, salt, and slaves; include the Swahili trading cities.

Trade between the Mediterranean and sub-Saharan Africa was quite limited until the camel came into regular use in the third century CE. As a beast of burden, the camel was and continues to be ideal for merchants in the Sahara. Able to travel up to 60 miles a day with 500 lbs. of cargo, a camel can go up to ten days without water. North African Berbers improved upon earlier advances by the Arabs to develop highly effective war saddles for camels. These technological developments made regular caravans safe and profitable in the Sahara Desert. This regular exchange of goods led to the slow diffusion of Islam into the region.

Trade across the Sahara had three basic production and consumption centers. The forest regions between the Niger and Senegal Rivers exported gold, slaves, kola nuts and palm oil to the north. In return they purchased salt which was essential for life in the tropic climate. This salt was mined in the Sahara desert near Taghaza. Metal ware, pottery and glass manufactured along the Mediterranean coast was purchased with gold from the Niger River region and flowed south to the communities in and below the desert. Much of this exchange was handled by middlemen in the Sahel region which led to the growth of major trading cities like Timbuktu.

The east coast of Africa was also an import area for international trade. Highly predictable seasonal monsoon winds combined with the maritime technology of the dhow and lateen sail developed by Arabs made open ocean navigation safe and profitable. Arab merchants of the Indian Ocean maritime system visited ports in Mogadishu, Mombasa, and Zanzibar among others. While visiting East African ports, merchants purchased ivory, gold, ebony, slaves, and exotic animal products and sold silk, cotton cloth, porcelain, metal ware, glass, and spices. Because the merchants of the Indian Ocean depended on seasonal winds, they generally spent several months in each port of call. These extended stays led many merchants to marry local women creating a unique culture in the region that blends West African and Arab customs. The Swahili language is an excellent example of this as it is a blend indigenous Bantu languages and Arabic.

SSWH6 Describe the diverse characteristics of early African societies before 1500 CE/AD.

c. Understand the blending of traditional African beliefs with new ideas from Islam and Christianity and their impact on early African societies.

Most indigenous religious systems in sub-Saharan Africa focused on animism, the belief that divine forces resided in the elements of the natural world including the flora, fauna and natural geography. Many believed that shamans or witches could harness these powers for good and evil. As Islam spread to North, West and the Swahili Coast of East Africa and Christianity spread to Ethiopia and Egypt these traditions were sometimes replaced and sometimes blended with the new faith systems. While these new faith systems brought major changes to much of Africa like the introduction of written language, the establishment of new educational systems like the madrasa and monastery, and new moral codes like Sharia law, many native traditions endured. In West and East Africa the belief in and practice of magic continued despite the objection of orthodox Muslims. This is evident in the Malinke epic Sundiata in which Sundiata and his adversary use magic in battle despite both being Muslim. These regions also saw the modification of many Muslim traditions to better suit native customs. For example, Islamic traditions related to the seclusion and veiling of women did not take hold in West Africa despite their conversion to Islam. The traditional customs that allowed women to move freely in public endured well after the region’s conversion. Adaptation also occurred as Christianity spread to Egypt and Ethiopia. The Egyptian Coptic Christian belief in the spiritual significance of the Nile is an excellent example.

WORLD HISTORY

SSWH7 Analyze European medieval society with regard to culture, politics, society, and economics.

Overview: Students will be expected to explain the decline and recovery of European society during the medieval era. Students should understand that following the fall of the Roman Empire, European urban centers witnessed population loss and centralized political authority decline substantially leading to a largely rural agrarian society that was far less culturally or economically unified than Europe during the Roman era. This new society was a blend of older Roman traditions, the culture of invading Germanic peoples and Christianity. With time, several factors including the Roman Catholic Church, the plague and the crusades contributed to European recovery. Special attention should be placed on the cultural, economic, societal and political developments that left an enduring legacy.

SSWH7 Analyze European medieval society with regard to culture, politics, society, and economics.

a. Explain the manorial system and feudal relationships, include: the status of peasants and feudal monarchies and the importance of Charlemagne

The last Latin speaking emperor lost power in Rome in 476 CE. After this, centralized political authority, long distance trade, urbanization, and literacy slowly declined in Western Europe. Germanic tribes flooded into the region and established hundreds of small kingdoms and tribal chiefdoms. The political authority in these kingdoms tended to be very weak, based mostly on the king or another strong man’s ability to provide protection. Borders and thrones shifted often as war between and within kingdoms was common. A semblance of political unity and cultural revival emerged under the Carolingian Dynasty of the Franks from about 751 to 814. The Carolingian kings gained and expanded their power through an alliance with the Roman Catholic Church. The pope crowned the first Carolingian King, Pepin, the “king by grace of God.” This act established a tradition that long endured in Europe in which the pope claimed the right to confer secular political power on kings. Carolingian power reached its peak under Charlemagne who built an empire that spanned most of Central Europe. The pope re-enforced this power by crowning Charlemagne the “Roman Emperor” in 800. Under Charlemagne, Europe briefly enjoyed a level of political unity that had been unseen since the fall of Rome. Charlemagne also fostered a modest intellectual revival by sponsoring the creation of schools. Weak leadership by Charlemagne’s heirs reversed much of this centralization and cultural revival and Europe became a largely feudal society in the years after his death in 814.

Feudalism took shape slowly and varied greatly from place to place. Historians of the past overly simplified the institution into a strict pyramid shaped hierarchy in which kings granted lands to nobles who in turn granted lands to knights in exchange for oaths of loyalty and promises of military
service. While essence of these description is generally accurate, most modern historians see it as a gross simplification of a system that would be more accurately described as a web.

At its most basic level, feudalism was a system that linked landholding with military service. Kings did grant land (called fiefs) to vassal in exchange for military service and oaths of loyalty. The land grants might be quite large, made to a lord who also received a title of nobility like duke or marquess. The land grants might also be small to a knight who served in the king’s personal army. Recipients of large land grants might in turn grant out fiefs to lesser nobles or knights who served in their personal army. It was not uncommon for kings, nobles and knights to be vassal to more than one lord having received land grants and possibly even titles from more than one person. The system became more complicated as it became hereditary over time. Titles of nobility and the fiefs associated with the title might pass from one family to another through marriage.

The original inhabitants of the land granted to these vassals became serfs in most of Europe. As a serf they were legally bound to the land and obliged to work as farmers for the lord. In other areas these inhabitants might be free peasant farmers who were free to leave but generally had no incentive to do so.

Under feudalism Europe became highly decentralized. While long distance trade never completely disappeared, it was greatly reduced as the old Roman system of roads fell into disrepair. This decentralization forced much of Europe to become largely self-sufficient. Each feudal lord maintained a manor on which most if not all of the basic necessities of life were produced. The term manor is used to describe this self-sufficient economic system that developed on the feudal lord’s fief. The typical manor included the lord’s manor house, a church, workshops, a mill, a village of cottages for peasants or serfs, pastures for livestock and farmland. The peasants or serfs were obligated to provide labor to the lord and pay taxes while the lord was obligated to maintain order, provide housing and protect to the inhabitants of his manor.

SSWH7 Analyze European medieval society with regard to culture, politics, society, and economics.
b. Explain the political impact of Christianity and the role of the church in medieval society.

The weak and decentralized nature of feudal states provided an opportunity for the Roman Catholic Church to emerge as both a spiritual and temporal power in medieval society. When the pope crowned first Pepin and later Charlemagne (see SSWH7a) he established an important and enduring precedent for papal political power in Europe.

While political power and the economy of Medieval Europe was highly decentralized, the spiritual unity of the continent remained quite unified. The popes in Rome maintained this unity through a hierarchy of clergy that included cardinals, bishops, abbots, and parish priests. The authority of the clergy over the royalty, nobility and common people was reinforced by several factors. First, medieval Catholicism taught that only the clergy could interpret the scripture. This monopoly on religious authority was reinforced by the fact that medieval bibles were written in Latin, a language very few Europeans outside the clergy could read. Second, the clergy alone could administer the seven sacraments or rituals that the church said were required to achieve internal salvation in heaven. Third, the church enforced a law code (canon law), on all believers. Canon law regulated the behavior of all church members and was enforced by a network of courts that had the authority to arrest and punish violators. The punishment of the most extreme forms of heresy included torture and execution. The most powerful tool of the church in maintaining its power was the threat and use of excommunication and interdict. When the pope issued an excommunication, he expelled a believer from the church, thus denying them any opportunity to achieve eternal salvation and as a result condemning them to eternal punishment in hell. An interdict denied the sacraments to entire regions thus condemning all of the inhabitants to hell. In a society deeply rooted in faith, these served as very powerful tools in maintaining both the spiritual and secular authority of the church.

The monarchical of Europe regularly attempted to temper the authority of the pope in their realms by placing their allies in the clergy. Because bishops served as regional church leaders throughout Europe the monarchs wanted the authority to appoint the bishops within their realms. This practice of was known as lay investiture. The church tolerated this practice until 1075 when Pope Gregory VII banned lay investiture. This infuriated the Holy Roman Emperor Henry IV who was in the process of consolidating his power. Henry called on the pope to step down but the pope responded by excommunicating the emperor which severely weakened is secular authority. To regain the respect of his subjects and access to internal salvation in heaven, Henry was forced to stand in the snow barefoot while wearing a itchy hair shirt and beg for forgiveness from the pope for three days. In the end, Gregory withdrew the
excommunication and Henry accepted the ban on lay investiture but the struggle between the popes and the monarchs of Europe endured.

In addition to political and religious authority, the church was also an important force in maintaining cultural unity in Europe. While educational opportunities were rare in Medieval Europe, the network of Catholic monasteries did provide some opportunities for scholarship and research. Further, the Catholic church constructed several monumental gothic cathedrals during this period that endure as high points in European art and architecture to this day.

**SSWH7** Analyze European medieval society with regard to culture, politics, society, and economics.

c. Describe how increasing trade led to the growth of towns and cities, include: the impact of the Bubonic Plague
The increase in trade and urbanization of Europe was precipitated by population growth that began around 800. This population growth was the product of the convergence of climatic conditions and technological innovations which led to an increase in the food supply. From about 800 to 1200 Europe experienced a warm spell that allowed a fairly dramatic increase in land available for cultivation and an extension of the growing season. Sometime around 800 several new farming technologies were either developed or diffused to Europe from North Africa. These include the horse collar and breast-strap harness. These technologies allowed Europeans to replace oxen with horses in agricultural work, a major advance because a horse can plow about three times faster than an ox. Other agricultural innovations around 800 include the heavy plow and the three field system. The heavy plow used a large metal blade to cut into the soil thus increasing the efficiency of farmer’s work. Likewise, the three field system improved efficiency by increasing the amount and fertility of land under cultivation. The mild climate and improvements in technology led to rapid population growth which in part spurred what historians term a commercial revolution in Europe around 1000.

During the early years of this commercial revolution regional fairs emerged. These fairs were generally held on religious holidays in or near the few small towns that existed in Medieval Europe. Peasants from nearby manors would travel to the fairs to buy and sell goods with each other and traveling merchants that brought exotic goods from the east. As these fairs became larger and more frequent they spurred the growth of these towns. As the towns grew they became increasingly independent existing largely outside of the authority and traditions of the feudal system discussed in SSWH7a. With time towns grew into cities, particularly in areas with access to seaborne trade like Italy and Flanders.

At the height of this commercial revolution several new business institutions developed that further spurred urbanization and economic growth, these include the guild and banks. Guilds were organizations of merchants and artisans that worked together to regulate business practices to ensure the profitability and viability of their respective commodities. Banking provided loans and infrastructure for the monetization of the economy.

The commercial revolution and urbanization in Europe gave birth to a new social class in the region. This class, made up of artisans, merchants and bankers lived in cities that were outside of the jurisdiction of the feudal system. Many feudal monarchs attempted to bring these cities under their authority, however few were successful, particular in Italy and Flanders. Cities like Venice and Florence became independent republics ruled by this new class that became known as the bourgeoisie or burghers.
In 1347 a Genoese merchant fleet carrying the bubonic plague docked in Sicily, four years later the plague spread to almost all of Europe, killing about one-third of the population. Bubonic plague both fostered and reversed the trends set in motion by the commercial revolution. While fear and death diminished populations in European cities, decreased trade and drove up prices it also severely undermined the feudal system in the countryside. This weakening of the feudal system led to economic growth and development in the long-term. The massive deaths brought on by the plague increased the demand for peasant labor which in turn increased their ability to demand higher wages. When nobles refused to increase wages, serfs and peasants fought back in violent rebellions in England, France, Italy, and Belgium. In the end the grip of the nobility of the peasantry of Europe was forever weakened allowing this population greater freedom to pursue their own economic self-interest.

SSWH7 Analyze European medieval society with regard to culture, politics, society, and economics.

d. Describe the causes and impact of the Crusades on the Islamic World and Europe.

In 1037 the Seljuk Turks established an empire in the Middle East. Seljuk power threatened the Byzantine Empire by 1093 leading the emperor to solicit help from Pope Urban II. Urban responded by calling for the first Crusade to free Jerusalem from Muslim rule. The first Crusade set off in 1096 and lasted until 1099. The Crusaders successfully drove the Turks from Jerusalem and established four small Christian kingdoms in the Middle East. This success was short lived however, in less than 100 years Jerusalem was back in the hands of the Muslim Turks. The Christians of Europe organized several other Crusades over the next 300 years but none of them were ever able to retake Jerusalem.

Map of the Second Crusade (1147-1149 AD) ExploreTheMed.com
Motivation for the Crusades was a mix of genuine religious zealotry, economic self-interest, and political opportunism. Devout Christians found motivation in the fact that the Seljuk Turks denied Christian pilgrims access to Jerusalem and the pope’s promise of guaranteed salvation for all those who died on Crusade. Those seeking economic advantage hoped that the Crusades would offer opportunities for booty and land. This was particularly inviting to the younger sons of nobles. Under feudal tradition, the oldest son inherited his father’s land and titles leaving little opportunity to younger brothers. The Crusades offered these young men a chance to obtain land and titles in newly conquered territory. Italian merchants sought profit from financing and transporting Crusader armies and hoped that success on the battlefield would bring Christian control of lucrative trade routes. The popes hoped that the Crusades would bring peace to Europe by uniting quarreling knights against a common enemy abroad and reinforce the power of the papacy in secular affairs.

While the stated goals of the Crusades were only realized for a brief period the other effect of these endeavors on Europe long endured. The Crusades stimulated Mediterranean trade. The coastal Crusader states established in the first Crusade facilitated trade between Asia and Europe and the exposure of Europeans to Asian goods while on Crusade increased demand for these commodities. Europeans were also exposed to Muslim scholarship while on Crusade. This scholarship included the translated works of many of the classical Greek philosophers. Many of these works had largely been forgotten in Europe and were only rediscovered by Europeans by way of Arab translations. Arab, Persian, and Greek scholarship helped spur and intellectual awakening in Europe in the early 15th century. The Crusades also helped to undermine the feudal order in Europe. The Crusades offered opportunities to all levels of society. Kings found greater power and influence as the armies consolidated under their leadership. Serfs gained freedom and sometimes wealth from participating in Crusades. A few lucky nobles gained titles and land in the short-lived Crusader States.

To the east, the Crusades left a legacy of animosity. During the fourth Crusade, motivated by economic opportunity, Western European Christians sacked and looted Constantinople. This attack only increased the divide between the Roman Catholic Church in the West and the Eastern Orthodox Church. Years later in the 19th and 20th century the history of the European Crusades against the Muslim world became a tool of Turkish and Arab nationalism.

SSWH8 Describe the diverse characteristics of societies in Central and South America.

- Explain the rise and fall of the Mayan, Aztec, and Inca Empires.

Mayan Civilization emerged out of the cultural footprint left by the Olmec Civilization. Maize cultivation led to the development of villages that grew into urban centers around 800 BCE. Mayan civilization fully emerged by 250 CE. While the Mayan shared a common culture they never achieved political unity, instead approximately 40 independent city-states dominated the region from Southern Mexico to Honduras. Some of the more powerful states exerted authority over smaller dependent states located nearby. The Mayan classical age lasted from about 250 CE to 900 CE.

The Mayan Civilization decline began around 800 CE when many of the urban centers were abandoned. The reasons for the Mayan decline are unclear. Scholars suggest that possible causes could include volcanic activity, excessive warfare, disease, overpopulation, or soil exhaustion. By 900 CE, most Mayan cities were abandoned and the population lived in villages led by tribal chiefs.

As Mayan culture faded in 800 CE, the Toltec rose in the valley of Mexico and dominated the region from about 800 to 1100. In the wake of the fall of the Toltec, the Aztecs migrated into the valley of Mexico where they struggled to integrate themselves among the urban agricultural societies surrounding Lake Texcoco in the heart of the valley of Mexico. In their early years in the valley, the Aztecs worked as farm laborers and mercenaries for their more powerful neighbors. With time their strength grew and they founded twin capitals, Tenochtitlan and Tlatelolco, on a small island in Lake Texcoco in 1325. Around the same time the older tribal organization of leadership gave way to a monarchical system borrowed from neighboring societies. This consolidation of leadership allowed the Aztecs to start the process of imperial conquests which began with agricultural lands around Lake Texcoco. Once the Aztec capitals were economically secure, they formed an alliance with two powerful city-states located on the shores of the lake and began the process of building a vast tribute empire.
The development of this empire was motivated by several factors. Like earlier civilizations of Mesoamerica, the Aztec religion required regular human sacrifice with the preferred victims being prisoners of war. This need for sacrificial victims led to almost constant “flower wars” during which Aztecs would capture warriors from neighboring regions to deliver to the priests of Tenochtitlan for sacrifice. Another motivation was the fact that political power and social status was based on the success of these campaigns. Aztec emperors were compelled by tradition to legitimize their rule with successful wars of conquest. While much of the Aztec nobility was hereditary, commoners and nobles alike could earn social promotion by successfully securing captives in battle. Finally, these wars served an economic function by building a vast tribute empire that subsidized the cities of Tenochtitlan and Tlatelolco. Subject people within the vast Aztec empire were required to send the capitals regular payments of maize, beans, cotton cloth, jade, gold and sacrificial victims.

In 1502 Montezuma II became the emperor of the Aztecs. By this point, the tribute demands that the Aztecs placed on their subjects was breeding resentment and instability. Montezuma instituted reforms to try and quell the unrest but this came too late. In 1519 Hernán Cortés arrived on the coast of Mexico with 600 conquistados. Shortly after arrival Cortés met La Malinche, a native woman who served as his translator. With La Malinche’s help, the Spanish learned of both the vast wealth in the Aztec capital of Tenochtitlan and the widespread anger among the Aztec subjects. Cortés was able to use this anger to establish alliances with native armies as he marched toward the Aztec capital. Cortés entered Tenochtitlan in 1521, claiming that he came in peace. Montezuma may have initially welcomed Cortés into the capital because of rumors that he was the god Quetzalcoatl. Aztec prophecies predicted Quetzalcoatl return and some may have believed that Cortés was the fulfillment of this prophecy. Once in the city, the Spanish took Montezuma hostage and began looting the palace. The Aztecs and their remaining allies were initially able to drive the Spanish from the city but their success was short lived. The Spanish had several advantages that proved insurmountable to the Aztecs. Native allies gave the Spanish a numeric advantage. Smallpox, spread by the Spanish, devastated the densely populated cities of the valley of Mexico. Steel weapons, horses, war dogs, guns, and armor also proved helpful to the Spanish in their defeat of the Aztecs. In August of 1521 the Spanish ended the Aztec Empire.

The Incan Empire (more properly called Tawantinsuyu) grew out of the economic and cultural footprint of the Chaven (c. 900 BCE to 200 BCE), Moche (c. 100 to 800) and Wari (c. 500 to 1000) civilizations. In the early 1400s, the Inca were one of several competing military powers in the southern highlands of Peru. In this early stage of their history, the Inca were organized into chiefdoms based on kinship groups. In about 1430 Wiraqocha Inka began to consolidate his power over these groups and established a hereditary monarchical system of government centered in Cuzco. Once firmly in power, Wiraqocha Inka began a period of imperial conquest that lasted until about 1525. Early conquests by the Inca may have been motivated by drought or military threats from rival states to the west or south. Over time, the motivation shifted to the desire to capture booty and eventually territory. Pre-Incan civilizations of the Andean Region learned early on how to exploit the microclimates that range from the coast to the mountain valleys to the rainforests of the interior. Incan imperial ambition was driven by the desire to take control of enough territory to allow the exploitation of all of these microclimates. The system of political legitimacy that justified the power of Incan emperors also motivated imperial conquest. Upon an emperor’s death political power would pass to the most able son but the wealth (mostly in the form of vast agricultural estates like Ollantaytambo) would pass to the rest of the family. The family members that inherited the wealth were expected to use this wealth to maintain an elaborate cult around the
mummy of the deceased emperor. This system of split inheritance required each emperor to acquire wealth through the conquest of new territory. By 1525 the Inca built a vast empire bound together by a professional army and elaborate bureaucracy that managed affairs by dividing the empire into four parts and eight districts all unified by an extensive network of roads, storehouses, garrisons, and frontier forts.

Smallpox arrived in the Andean region well before the Spanish in 1520s. The disease caused political turmoil when it killed the emperor and led to a civil war. When the war ended, Atahulpa became emperor but his hold on power remained tenuous. In 1530 Francisco Pizarro arrived with 180 Spanish Conquistadors. He was able to use the political instability to his advantage and captured Atahulpa. Pizarro and his men executed Atahulpa which caused even greater political instability in the empire and allowed the Spanish to take the city of Cuzco in 1533. By 1536, the Spanish defeated the last Incan rebellion and took control of the Inca’s empire.

Standard - SSWH8 Describe the diverse characteristics of societies in Central and South America.

b. Compare and contrast the Mayan, Aztec, and Incan societies, include: religion, culture, economics, politics, and technology.

The Mayan, Aztec, and Incan civilizations were all polytheistic with an emphasis on the worship of the sun. This focus on the worship of the sun led to the development of elaborate and quite accurate calendars in all three societies. Faith in each of these civilizations required elaborate rituals that included sacrifice. Human sacrifice was most common in the Aztec Empire, with thousands of prisoners or war, criminals, slaves, and people given in tribute sacrificed a year. Human sacrifice was also common in the Mayan civilization but not done as frequently. While human sacrifice did occur in the Incan Empire, it was uncommon. Sacrifices of camelsids and textiles were much more typical. Emperors in each of these civilizations fulfilled an important spiritual role. In the Mayan and Aztec civilizations, emperors and other nobles were considered intermediaries to the gods. Mayan emperors and priests participated in elaborate bloodletting rituals during which the faithful believed they were communicating with the gods. In Incan society the emperors were considered descendants of the sun and therefore divine. As a result, Incan emperors were revered in both life and death. All three civilizations also constructed monumental architecture in the name of faith. The Mayan and Aztecs built tall pyramids that served as temples and the Inca utilized expert stone work to build elaborate temples in which the walls were covered in sheets of gold.

The Mayan, Aztec, and Incan societies were all highly stratified. Each had a hereditary nobility that dominated the government. In the Mayan and Aztec culture this stratification included ethnic Mayans and Aztecs with a substantial wealth gap between the elite and common peasants. Social divisions between ethnic Inca were not as dramatic as the wealth from the empire was used to support a relatively comfortable life for the ethnic Inca living in Cuzco. In this case, the non-Inca subject peoples of the empire made up the underclass of peasants. In all three of these cultures, the basic unit of society was a family based clan. In both the Incan and Aztec Empires the clan system was used by the state to allocate civic and military duty. This system was particularly important in the Incan Empire. The basic unit of the Incan society was the ayllu, a clan made up of a large group of people who claimed a common ancestor. The ayllu members worked collectively to support the members and fulfill their duty to the state.

Agriculture was the foundation of the economy for the Maya, Aztecs, and Inca. All three depended heavily on the cultivation of maize, beans, and squash. The Andean region’s many microclimates made the Incan economy much more diverse. Potatoes and quinoa were staples in the Andes but not in Mesoamerica. Pastoralism was also unique to the Inca. In the high mountain valleys of the Andes the Inca and their subject peoples kept vast herds of llama and alpaca for meat, textiles and transport. Commercial trade was much more common in the Mayan and Aztec civilizations than in the Incan Empire. Several factors contributed to this difference. Each ayllu in the Incan empire controlled territory in several different microclimates. Therefore, each family group was largely self-sufficient making commercial trade less important. Also the Incan state used an elaborate labor tax system called the Mit’a. This labor tax system assigned duties to each ayllu which included cultivating crops and producing manufactured goods for urban elite further reducing the need for commercial trade. Both the Aztec and Mayan societies had a robust merchant class that transported luxury goods over great distances.
leading to thriving markets in each major city where merchants and common people bartered for a great variety of goods.

While the Aztecs and Inca ruled a unified empire the Mayan civilization was divided into approximately 40 independent city-states that dominated the region from Southern Mexico to Honduras. Some of the more powerful states exerted authority over smaller dependent states located nearby. Each city-state was ruled by a hereditary monarch/priest who maintained power through faith and force. The polytheistic religion of the Maya required regular human sacrifices. Prisoners of war were the preferred victims of these ritual sacrifices leading to almost constant warfare between neighboring Mayan city-states. Success in these wars and bloodletting rituals cemented the king’s power as he was seen as an intermediary between the people and the gods. Aztec emperors also had an important spiritual role that included leading wars for the capture of sacrificial victims. These emperors were not hereditary however, instead they were selected from the noble families of the Aztec capitals by a council of aristocrats with whom they had to share power. Like the Maya, the Incan emperors were hereditary and their power was also justified by successful military campaigns and a connection to the gods. Human sacrifice was far less common in the Inca civilization so the wars were principally about the accumulation of land and wealth. The Incan Empire’s government was much more centralized than the other two civilizations. The Aztec Empire utilized military force to extract tribute in the form of material goods from subject people. While the Inca also extracted tribute, it was in the form of labor. The Incan state took direct ownership of the land it conquered and utilized an elaborate labor tax system called the Mit’a to direct the labor of subject people to the service of the state. This system required a much more centralized form of administration in the Inca lands. The empire was divided into regions with local administrators that directed the hereditary leaders of the family clans or ayllus located within their region.

The major technological advances of the Mayan, Aztec and Inca revolved around the cultivation of crops. All three made major advances in selective breeding, calendar making, and irrigation. They also share major advances in stone architecture. All three built monumental architecture out of stone with the Inca achieving an impressive level of refinement. Incan stone cutters built walls out of perfectly cut
stones that interlocked and were reinforced with bronze rings allowing the buildings to withstand the earthquakes that are common in the region. These civilizations also developed advanced systems of record keeping. The Aztecs and Maya developed a written language that utilized hieroglyphics. The Inca utilized a system of strings and knots called the quipu that allowed numeric record keeping. The Inca and Aztecs developed technologies to address the unique characteristics of their homes. For the Inca this included an elaborate system of paved roads that included suspension bridges and advanced terracing techniques. These roads and terraces facilitated the Inca’s ability to exploit the many microclimates of their Andean home. The Aztecs developed a complex system of dikes and aqueducts to manage water on their island home in Lake Texcoco. Texcoco was a terminal lake with a high salt content. Aztec engineers devised methods to control the salinity of the lake and allow the cultivation of crops on man made islands built around their capital.

TEACHER NOTES
WORLD HISTORY

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

Overview: Students will be expected to explain the cultural, intellectual, economic, and political changes that occurred during the European Renaissance and Reformation. Attention should be placed on how these changes contributed to the development of the modern culture of Europe and America. Students should also note that some elements of European culture did not change despite the intellectual flowering and religious upheaval of the era.

Resources: (if appropriate)

SSWH9 Analyze change and continuity in the Renaissance and Reformation.
a. Explain the social, economic, and political changes that contributed to the rise of Florence.

Several factors combined to spur the growth of towns in Northern Italy. First the Crusades and later the growth of the Mongol Empire fostered long-distance trade and outbreak of plague drove up wages and created a demand for labor. Florence benefitted from these developments growing into an important center for the manufacture of wool cloth in the 1300s. During this period, Florence was an independent city-state with a republican form of government. The republic was controlled by wealthy merchants and artisans making it an ideal place to do business. Guilds regulated trade and manufacturing to ensure economic benefit and limited risk for members. Political independence and guild regulation fostered continued growth resulting in Florence becoming a major financial center in the 1400s. The development of the financial institutions of Florence was orchestrated by the Medici family who established a bank in Florence with branches in Flanders, London and other cities of Italy. The Medici bank made major advances in financial services including checking accounts and lending. Florence also saw the development of shareholding companies in this period. All of these factors contributed to the accumulation of vast wealth by many of the citizens of Florence. The wealthiest of all was Cosimo de Medici who used his wealth and control of the banking industry to take control of the government. While Cosimo de Medici maintained the appearance of a republic he ruled Florence as a dictator. This continued under his son Lorenzo de Medici. Under Medici leadership, Florence continued to thrive as a center of commerce. The vast wealth held by the residents of Florence funded major cultural developments in art and architecture.

Standard -SSWH9 Analyze change and continuity in the Renaissance and Reformation.

b. Identify artistic and scientific achievements of the Renaissance.

During the Medieval period sculpture and painting were considered the work of tradesman. Most of the work was commissioned by the church and was limited to the depiction of scenes from the bible. The techniques used were generally very rudimentary leading to the production of painting and sculptures that were fairly simple and relied heavily on symbolism to convey their meaning.

This pattern changed with the Renaissance which started in Italy and later spread to Northern Europe. Wealth patrons in Italy willing to pay for high quality works inspired a new approach to the arts. Artist like Botticelli, Michelangelo and Leonardo da Vinci found inspiration in the Greek and Roman use of realism and approached the visual arts as an intellectual pursuit. This new approach led to major advances in techniques like the use of perspective and shading. Highly realistic paintings like da Vinci’s Mona Lisa and Raphael’s School of Athens conveyed human emotion, movement, and space in a way that had never been done before. In sculpture, Michelangelo’s David depicted muscle tone, bone structure and emotion in marble.

Literature also took a turn to the realistic. Authors like Boccaccio, Petrarch, and Shakespeare wrote stories steeped in human emotion. Authors began to move away from the tradition of writing in Latin and instead chose the much more accessible vernacular of their homes.
This period also saw advances in other intellectual pursuits. In the eleventh century, Greek manuscripts were reintroduced to Europe. Much of this work had been lost in Europe after the fall of Rome but it was preserved and built upon in the Arab world. When this work was reintroduced to Europe and translated into Latin it inspired European intellectuals to pursue studies in mathematics, medicine, geography and science. A renewed interest in scientific inquiry led to the growth of colleges in the 1200s and the development of modern universities in the 1300s.

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

c. Explain the main characteristics of humanism.

Medieval European intellectual life was dominated by the study of the bible and the pursuit of salvation. While intellectuals of the Renaissance remained devotedly Catholic a new intellectual movement encouraged individuals to also pursue secular concerns. The Humanist argued that the faithful could live an enjoyable life full of worldly pleasures without offending God. Humanism was inspired by the Greek classics and focused on the study of history, literature, and philosophy (called the Humanities). The movement idealized intellectual curiosity and versatility and celebrated human potential and achievement.

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

d. Explain the importance of Gutenberg and the invention of the printing press.

Block printing and moveable type was developed in China and Korea between the 9th and 12th century. This technology along with papermaking diffused to Europe in the 1300 and 1400s. Around 1450 three key innovations in the process were combined by Johann Gutenberg of Mainz, moveable type, the printing press, and ink suitable for printing on paper. This breakthrough allowed Gutenberg to efficiently print books. In 1454 he completed the first printed book in Europe, the Gutenberg Bible. The technology took hold rapidly in Europe with 10 million printed books produced by presses in 238 towns by 1500. This printing boom contributed to the growth of Humanism, the development of universities, the Protestant Reformation, and increased literacy across the continent.

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

e. Analyze the impact of the Protestant Reformation, include: the ideas of Martin Luther and John Calvin

During the medieval period the Catholic Church based in Rome and under the leadership of the pope served as a major source of unity for Europeans, however this began to change in the 1500s. The Renaissance emphasis on individualism and secular pursuits laid the foundation for a major change in the religious landscape of Europe. Some Catholic clergy, in part influenced by the ideas of the Renaissance, began to live lavishly off of the moneys collected by the church. The clergy had access to vast amounts of wealth in the form of church tithes, rents collected from church lands, and business ventures operated by Catholic monasteries. Many clergy members used this wealth to live lavish lifestyles that alienated church leadership from the laity. This alienation was further aggravated by the presences many poorly educated priests and monks. This situation led to widespread frustration among church members. In 1517 Pope Leo X authorized the sale of indulgences to fund the rebuilding of Saint Peter’s Cathedral in Rome. An indulgence served as a pardon for sins, allowing the purchaser to avoid the penance or “good works” normally required by believers for forgiveness. While an indulgence was not supposed to replace God’s right to judge, Catholics were given the impression that they could purchase a free pass to heaven for themselves or a loved one.

The sale of indulgences provoked Martin Luther, a Catholic monk, to act. On October 31, 1517 Martin Luther posted the 95 Theses on the door of a church in Wittenberg, Saxony (part of modern Germany). In this document, Luther explained his grievances with the corruption he saw in the Catholic Church. The 95 Theses was taken to a printer and circulated widely in the German states. Luther quickly gained a vast following of discontented believers. The monk went on to develop a theology that undermined the authority of the Catholic clergy. These beliefs included justification by faith. According to this principle, believers could win forgiveness with faith alone, no “good works” or penance was required. Further, Luther argued that the only true source of religious truth was the Bible arguing that lay people could study the Bible and become righteous Christians without the help of the Catholic clergy. Initially, Luther hoped to draw attention to the corruption in the church in the hopes of bringing about reform but the pope’s response drove Luther out of the church all together. In January of 1521, Martin Luther was excommunicated and thereafter a new Christian faith was born: Lutheranism. With time and after much violence much of what is today northern Germany and Scandinavia became Lutheran.

Pamphlet against Luther as a seven-headed monster; from: Otto Henne am Rhyn: cultural history of the German people , Second Volume, Berlin 1897, p.17
Martin Luther’s protest inspired many others including John Calvin who published *Institutes of the Christian Religion* in 1536. In this work, Calvin developed a theology that argued that humanity was sinful by nature and that God predetermined which people would achieve salvation at the beginning of time. Calvin argued that the “elect” (people chosen by God for Heaven) should come together to form a utopian community free of sin. Calvin helped build this community in Geneva Switzerland in the 1540s. Calvin’s success in Geneva inspired others to take his faith to other regions. The Presbyterians of Scotland, the Huguenots of France, and the Puritans of England were all born out of Calvinist theology.

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

f. Describe the English Reformation, including the role of Henry VIII and Elizabeth I.

While Martin Luther and John Calvin abandoned the Catholic Church for spiritual reasons, Henry VIII was motivated by political and personal concerns. The Tudor Dynasty of Henry the VIII came to power after a bloody civil war that resulted from the lack of a male heir. Henry VIII was determined to avoid this fate. After 18 years of marriage to Catherine of Aragon the king only had one daughter, Mary. Catherine was now 42 years old and Henry was convinced that she would not bear any more children. Under Catholic law divorce was impossible but Henry could ask the pope to annul the marriage if it was entered into illegally. In 1527 Henry asked the pope for an annulment based on Catherine’s previous marriage to Henry’s brother. The pope refused in part because of pressure from Catherine’s nephew the Holy Roman Empire. Henry responded by asking the English Parliament to pass legislation ending the pope’s authority in England and granting Henry the right to divorce Catherine. In 1533 Henry divorced Catherine and married Anne Boleyn. A year later the English Parliament passed the Act of Supremacy officially making Henry VIII the head of the church of England and ending England’s association with the Catholic Church.

Anne Boleyn gave birth to a daughter, Elizabeth, and shortly after fell out of favor with the king. She was found guilty of treason and beheaded in 1536. Henry immediately married Jane Seymour who gave birth...
to a son, Edward, in 1537. Seymour died from complications during the birth of Edward and Henry went on to marry three more women but none of these marriages resulted in children.

Henry VIII died in 1547 leaving the throne to Edward who was just nine years old and very sickly. Edward died six years later leaving the throne to his oldest sister Mary. Mary was a Catholic and attempted to restore Catholicism to England, while she was partially successful her reign ended with her unexpected death in 1558. Elizabeth, a protestant, assumed the throne permanently established the monarch of England as the head of the English Church. Elizabeth worked to establish a church for England that would serve as a compromise between the Catholics and Protestants. The Anglican Church, as it came to be called, included many of the rituals and trappings of Catholicism but services were delivered in English and the Bible was translated into English, something very important to Protestants. This compromise secured Protestantism in England.

SSWH9 Analyze change and continuity in the Renaissance and Reformation.

g. Describe the Counter Reformation at the Council of Trent and the role of the Jesuits.

After losing much of Northern Europe to Protestant faiths, the Catholic Church responded with the Counter Reformation. The Counter Reformation was a movement orchestrated by top clergy to clarify church doctrine, increase membership and curb corruption. Between 1534 and 1563 the Catholic Church made several moves to accomplish these goals. First, the pope authorized the creation of a new monastic order known as the Jesuits. The Jesuit order accomplished three important tasks for the Church. First it established a network of schools that vastly improved the quality of the clergy serving in the Church. Next it organized missions to convert non-Christians to Catholicism and lastly the Jesuits slowed the spread of Protestantism in Europe. In 1545 the pope called the Council of Trent, a meeting of Catholic bishops and cardinals to establish a unified response to the Protestant threat. The Council concluded that the majority of established Church doctrine was legitimate. This included the belief that the Catholic clergies' interpretation of the Bible was final and not open to discussion with laypersons, faith alone was not enough for salvation, believers must also do good works to achieve salvation (a direct rejection of Luther’s Justification by Faith), and Church doctrine was equal to the Bible as a source of religious truth. The Council of Trent did acknowledge that corruption was a problem including the circulation of misinformation about the power of indulgences. While the Church refused to reject indulgences outright, they did call for reform in the promises made to purchasers. In the end the Counter Reformation, or the Catholic Reformation as it is also called, slowed the spread of the Protestant Reformation and secured Catholicism in much of Southern Europe.

SSWH10 Analyze the causes and effects of exploration and expansion into the Americas, Africa, and Asia.

Overview: Students will be expected to explain the economic and religious motives for European exploration and colonization from 15th to the 17th century. This should include the desire to access Asian markets, exploit tropical agriculture, mine precious metals, and spread Christianity. Additionally students should explore the technology that made this colonization possible. Students are also expected to explain the effects of the European colonization of the Americas and Africa and the establishment of European trading enclaves in Asia. Instruction should focus on the economic effects including the rise of trans-Atlantic trade, the ecological effects including the Columbian exchange, the social effects including growth of chattel slavery and political effects including the fall of indigenous empires in America and the rise of European maritime empires.

Resources:
Watch this Crash Course World History video for a quick overview of the age of exploration.
https://www.youtube.com/watch?v=NjEgncridoQ

SSWH10 Analyze the causes and effects of exploration and expansion into the Americas, Africa, and Asia.

a. Explain the roles of explorers and conquistadors.

The European maritime exploration that followed 1450 upset the known world, ending American isolation and bringing about greater global interaction. It began with Prince Henry “The Navigator” of Portugal who encouraged his country’s maritime exploration to the South, aiming to sail around Africa to gain access to the Asian spice trade. In 1488, Bartolomeu Dias sailed around the southern tip of Africa, followed by Vasco DaGama who sailed into the Indian Ocean, reaching India in 1498. There DaGama established direct trade with India, bypassing the Italian and Muslim merchants who controlled the overland trade routes.

Inspired by Portugal’s maritime success, Christopher Columbus looked for a shorter route to India by heading West through the Atlantic instead of South around Africa. Ferdinand and Isabella of Spain funded his exploration, motivated by the search for wealth and the desire to spread Christianity in Asia. In 1492, Columbus landed in the Caribbean, believing that he had found his way to Asia, not realizing that two continents stood in his way.

Following Columbus’ expedition, Europeans continued to look for ways through and around the New World. In 1513, Vasco Nunez de Balboa, of Spain, crossed Panama, reaching the Pacific Ocean and confirming that the New World was not part of Asia. Ferdinand Magellan, also sailing for Spain, further settled the matter when he sailed around the southern tip of South America and sailed across the Pacific Ocean to the Philippines.

For their part, English, French, and Dutch explorers began to look for a Northwest Passage to
Asia. These included Jacques Cartier who explored the St. Lawrence River and Henry Hudson who explored the Hudson River.

Spain’s continued exploration and conquest of the Americas set up its Golden Age that lasted until the mid-1660s. In 1519, Hernan Cortez sailed to Mexico and conquered the Aztecs. Francisco Pizarro traveled south to conquer the Incan Empire, claiming land for Spain from Ecuador to Chile. These unlikely victories were made possible with the help of local dissidents, guns, horses, and a smallpox epidemic that severely weakened the Amerindians. These conquests were notable for the ways the Spanish plundered resources and forced conversion to Christianity.

http://www.eduplace.com/kids/socsci/books/applications/imaps/maps/g5s_u2/
SSWH10 Analyze the causes and effects of exploration and expansion into the Americas, Africa, and Asia.

b. Analyze the global, economic, and cultural impact of the Columbian Exchange.

The Columbian Exchange refers to the massive transfer of people, animals, plants, technology, language, and diseases between the Old World and the New World. European settlers to the New World brought African slaves with them. They also introduced wheat and grapes to the Americas, as well as cattle, chickens, horses, and sheep, which dramatically changed the cultures of the Amerindians. For example, horses gave the Plains Indians a greater advantage when hunting buffalo. The diseases that Europeans brought to the New World, including smallpox, measles, and influenza, devastated the Amerindian populations.

The New World provided the Old World with gold and silver, which strengthened European economies. The New World also gave important high-calorie foods including potatoes, corn, and manioc, in addition to tomatoes, pumpkins, and peppers, that became staples of Old World diets. Historians suggest that these high-calorie foods are one key cause of the population growth that occurs in the Old World in this time period.

Watch this Crash Course World History for a quick overview of the Columbian Exchange.
https://www.youtube.com/watch?v=HQPA5oNpfM4
SSWH10 Analyze the causes and effects of exploration and expansion into the Americas, Africa, and Asia.

c. Explain the role of improved technology in exploration.

Europeans’ efforts to explore oceans and new lands were aided by the development of four key technologies. Cartographers developed the skills to create more accurate maps. Europeans also learned how to use the astrolabe, a technology adopted from the Greeks and Arabs, which allowed them to determine latitude at sea. Thirdly, they built better ships, called caravels, which were nimble and sturdier for ocean travel. This ship design combined the square sails of European ships with the triangular sails of Arab dhows, and moved the rudder from the side to the rear of the ship, making it easier to sail into the wind. Finally, use of the magnetic compass in open ocean navigation was perfected by European navigators in this period.

SSWH10 Analyze the causes and effects of exploration and expansion into the Americas, Africa, and Asia.

d. Examine the effects of the Transatlantic Slave Trade on Africa and on the colonies in the Americas.

Slave trade was central to the Triangular Trade and led to the prosperity of port cities in the Americas, Europe, and Africa. Estimates of slaves captured and transported across the Atlantic to New World colonies run as high as 11 million, with an additional 2 million estimated lost at sea.

Europeans needing slaves for plantation labor in the New World traded muskets, tools, and textiles with African elites for African slaves. African rulers and merchant elites remained in control of the African continent and supplied Europeans with slaves captured inland and brought to the coast. The slave trade caused the decline of some African societies, as their populations were devastated, especially of young men and women. Other African societies rose in power as a result of involvement in the slave trade. For example, the Asante and Dahomey were able to prosper as slave traders and held a strong bargaining position with the Europeans. Some African leaders, such as King Affonso of Kongo and the almamy of Futa Toro in northern Senegal resisted the slave trade, though their efforts were ultimately unsuccessful.

In the Americas, the slave trade allowed colonies in the Caribbean, Brazil, and the south-eastern part of North America to become huge economic successes by providing unpaid labor on tobacco, rice, and sugar plantations. The arrival of slaves in the Americas contributed to the development of strict race based social hierarchies that led to the long-term suppression of both slaves and free people of African descent. Slaves also suffered from poor working and living conditions; this contributed to high mortality rates in the sugar and rice growing regions. Conditions were slightly better in the tobacco growing regions of the Chesapeake region. The importation of slaves to the Americas brought a rich and vibrant African culture to the Caribbean, South America, and parts of North America. This culture contributed to the language, diet, religion, and music of all of the region.

WORLD HISTORY

SSWH11 Examine political and social changes in Japan and in China from the fourteenth century CE/AD to mid-nineteenth century CE/AD.

Overview: Students will be expected to explain how foreign influences from Manchuria and Europe transformed some Chinese political and social institutions and how resistance to this pressure for change hindered China’s ability to face the growing power of European maritime empires. Students are also expected to examine how the Japanese responded to the presence of Europeans and how this led to the reactionary isolationist policies of the Japanese government.

SSWH11 Examine political and social changes in Japan and in China from the fourteenth century CE/AD to mid-nineteenth century CE/AD.

a. Describe the impact of the Tokugawa Shogunate policies on the social structure of Japan.

Tokugawa Ieyasu established a feudal-style government in Japan that lasted from 1600 to 1868. The Tokugawa Shogunate was a time of peace and stability within Japan. Internal trade thrived, road systems grew, merchants and artisans became wealthy, and cities prospered and expanded. This was also a time of isolation from the rest of the world. The Tokugawa shoguns kicked out Christian missionaries, set strict trade restrictions, and limited contact with foreigners.

Each daimyo (lord) governed an area and received taxes from peasants. To maintain their power and influence in a system of decentralized political authority, the Tokugawa Shoguns required daimyos to live part time in the capital. This put a financial burden on the daimyos who had to travel long distances as well as maintain two households. Tokugawa shoguns adopted a strict set of social classes with the warrior class of samurai at

Japanese Shogun
the top, followed by peasants, artisans, and merchants. Samurai, however, were not expected to fight, but to serve as bureaucrats paid a salary from the shoguns. This left them dependent on their shoguns and without opportunity to create independent wealth. Laws also limited women’s freedom to that allowed by their husbands.

By the nineteenth century, the shogunate was overrun with corruption. Daimyo struggled financially to meet the requirements of living part-time in Edo, especially since their wealth was primarily in land, not cash. The samurai chafed in their roles as bureaucrats and lack of wealth, despite being noble. Peasants struggled under heavy taxes, and merchants who had money, but were at the bottom of the social structure, had no real power.

Isolation ended with the arrival of Commodore Matthew Perry of the United States in the 1850s. Opponents of the deals the Tokugawa Shogunate made with the Americans and other foreigners overthrew the shogunate and re-established an emperor, known as the Meiji Restoration.

SSWH11 Examine political and social changes in Japan and in China from the fourteenth century CE/AD to mid-nineteenth century CE/AD.
b. Describe the impact of the Qing and Ming Dynasty policies on the social structure of China.

Together the Ming and Qing dynasties ruled China for over 500 years. The Ming dynasty, established in 1368 after kicking out the Mongols, aimed to restore China to its former greatness. Early emperors financed sea-faring missions to India, Arabia, and Africa demonstrating the prowess of the Chinese sea power in the early 15th century. This naval power was abandoned by later emperors who instead focused their resources on strengthening the northern frontier. This included work on the Great Wall of China, encouraging soldiers to migrate to the north, and relocating the capital to Beijing.

Ming emperors restored Confucianism and the civil service system. Social classes were set with the scholar-gentry at the top. These were landed nobles who filled positions in the government. Farmers were next in the social order followed by artisans and merchants at the bottom. The Ming emperors repaired the canal system, and oversaw a period of growth in arts and literature as well as the economy including both agriculture and specialized manufacturing. They also limited trade with the Europeans to a single trading post near Canton under imperial supervision.
In the early 1600s, the Manchu people captured part of Mongolia and Korea, and then in 1644 conquered Beijing, beginning the Qing dynasty, which lasted until 1912. The Qing emperors were Manchu, not Chinese, but ruled in the traditional Confucian style, continuing many of the Ming policies. They kept Manchu and Chinese people separate, however. Qing emperors required Manchu people to learn Manchu language and culture, and prohibited Chinese people from migrating to Manchuria. They also required Chinese men to wear their hair in a queue as symbol of their submission to the Manchu.

In the late 18th and early 19th centuries, the Qing government struggled to meet the demands of its booming population. Corruption increased, and the canal system deteriorated leading to floods and famines. The Qing emperors also faced increasing pressure from the West to open to foreign trade. In 1796, peasants rebelled, led by the Buddhist White Lotus Society. The government restored order, but was severely weakened. Frequent rebellions followed throughout the next century, including the Taiping Rebellion which lasted from 1850-1864.

SSWH12 Describe the development and contributions of the Ottoman, Safavid, and Mughal empires.

Overview: Students will be expected to explain how the Ottomans, Safavids, and Mughals combined traditional military technologies with innovations that included the use of gunpowder weapons to build large empires with exceptionally centralized governments. Students should explore how each of these empires contributed to trans-regional trade and intellectual development. Further, students should explain how the geographic scope of the empires contributed to the diversity of the population which fostered cultural development and political innovations.

Watch these Crash Course World History videos for quick overviews of Ottoman and Mughal Empires
https://www.youtube.com/watch?v=nbuM0aJjVhE
https://www.youtube.com/watch?v=UN-II_iBzz0

The 14th and 15th centuries saw the rise of both land and maritime empires. Both the maritime empires of the Europeans and the land empires of the Muslims learned to successfully weaponize gunpowder. While the Chinese and Mongols had used gunpowder in combat in the past, it was the empires of the 13th and 14th century that utilized it with great success. Cannons blew down the ancient walls that protected cities leading to a new age in military conflict. Walls could no longer secure a king or emperor’s hold on territory. The Ottoman, Safavid, and Mughal empires combined the use of gunpowder weapons with more traditional cavalry armed with composite bows with great success.

In the early 1300s, the Ottomans took over most of Anatolia before quickly moving into Europe and securing the Balkans within the century. Timur, a Turko-Mongol leader challenged their expansion in 1402, when he captured the Sultan and took territory. This led to a civil war in the Ottoman Empire, after which Murad II gained power and began another period of expansion continued by Mehmed II who captured Constantinople, renaming it Istanbul. Suleyman “the Magnificent” presided over the
Ottoman Empire’s golden age. At its height, the Empire reached into Europe, including Hungary and nearly Vienna. It controlled most of Eastern Europe, west into the Caucasus Mountains, Mesopotamia, around to parts of Arabia, and Northern Africa along the Mediterranean Sea. Importantly, it controlled the link between Europe and Asia at Gallipoli on the Dardanelles strait.

The Safavid Empire was bounded on the West by the Ottomans and on the East by the Mughals. It encompassed much of current-day Iran, and parts of Iraq. The Safavids lost territory in the 1500s to the Ottomans and Uzbeks. In 1587, Abbas the Great came to power and reformed the military, modeling it after the Ottoman military, including the use of slave-soldiers loyal only to the Shah. He defeated the Uzbeks in 1598 and in subsequent years, regained all territory that had been lost. He moved the capital to Isfahan and built it into a great economic, religious, and political center. After his death in 1629, the empire declined for the next century when the last Safavid ruler abdicated in 1722.

The Mughal Empire began in 1526 when Babur attacked and conquered the Turkish Muslims in Delhi, gaining control of the city and surrounding area. The empire lasted without significant external threat until 1857. Akbar, Babur’s grandson, managed to achieve peace and loyalty from the Hindu Indian population by marrying one of the Rajput princesses and giving Rajputs government positions. He also removed the head tax levied on all non-Muslims. The Mughal Empire reached its height during the reign of Shah Jahan who secured almost all of India, except for a portion in the South. His son, Aurangzeb, seized power and instituted a strict observance of Islamic law. He ended religious toleration, taxing Hindus and destroying their temples. This created a costly civil war between Muslims and Hindus that drained the empire’s finances and led to peasant revolts against increased taxes that combined to weaken the empire.

SSWH12 Describe the development and contributions of the Ottoman, Safavid, and Mughal empires.

b. Describe the cultural contributions of the Ottoman, Safavid, and Mughal Empires.

In the Ottoman Empire, social classes were not fixed by birth, but individuals could move between the two classes based on merit. The Ottomans also accommodated for religious diversity. Non-Muslims lived in separate religious communities called millets. They remained under the Sultan’s rule, but had their own governments, laws, customs, courts, and taxes. Millets were also responsible for their own education and safety. As Sultan, Suleyman improved the justice system, built fortresses, roads, bridges and mosques. He supported the arts, which thrived under his rule, including detailed miniatures and illuminated manuscripts.

When Ismail declared himself Shah of the Safavid Empire in the early 1500s, he also switched from Sunni Muslim to Shi’ite, and decreed that his subjects must similarly convert. This transformation was enforced through a century of wars and persecutions, but it succeeded in giving Persians an identity distinct from their Sunni neighbors.

Shah Abbas the Great who ruled the Safavid Empire from 1587 to 1629 centralized the government, encouraged foreign trade and manufacturing, especially carpet weaving and luxurious fabrics. He strengthened the economy by lowering taxes on farmers and herders. He built Isfahan into a world-class city with wide streets, a large central square, mosques, monuments, public baths and open markets. Shah Abbas tolerated non-Muslims, for example, bringing Armenian Christians to the capital to grow the silk trade and allowing them to govern themselves. He also welcomed artists, poets, and scholars at court.

The Mughal Empire under Akbar experienced a flourishing economy as a result of his improved tax system that was based on a village’s 10-year average production and allowed for no taxes during lean years. Akbar was tolerant of all religions and supported both Hindu and Muslim arts, including a blending of Persian, Islamic, and Hindu styles in architecture. This is best exemplified in the Taj Mahal built by Shah Jahan. Sikh faith also emerged out of this blending of Muslim and Hindu cultures. Aurangzeb, in contrast to the rulers before him, ended government spending on lavish buildings, imposed Islamic law throughout the empire, and persecuted non-Muslims.

SSWH13 Examine the intellectual, political, social, and economic factors that changed the worldview of Europeans from the sixteenth century CE/AD to the late eighteenth century CE/AD.

Overview: Students will be expected to explain how and why Europe experienced an intellectual awakening in the sixteenth century that led to a scientific revolution. Students are expected to explain how this scientific revolution led to the decline of superstition and the rise of reason in European intellectual circles and how this contributed to modern scientific processes. Further, students are expected to link these scientific advances to the rise of Enlightenment philosophies on the proper role of government in people’s lives. Students should explain how the ideas of Enlightenment philosophers were a radical deviation from traditional 17th and 18th century political theory and how it laid the groundwork for modern republican, federal, and democratic forms of government.

SSWH13 Examine the intellectual, political, social, and economic factors that changed the worldview of Europeans from the sixteenth century CE/AD to the late eighteenth century CE/AD.

a. Explain the scientific contributions of Copernicus, Galileo, Kepler, and Newton and how these ideas changed the European worldview.

Nicolaus Copernicus, a Polish scientist, published his argument for a helio- or sun-centered universe in 1543. Although his work received little notice, it importantly abandoned Ptolemy’s geo- or earth-centered construction of the universe that had been the accepted understanding since the AD100s. His case for the helio-centered universe denied experience: one could see the sun moving around the earth and couldn’t feel the earth moving at all.

More than 60 years later, Johannes Kepler, a Danish mathematician tested and proved Copernicus’ idea using models and mathematics. He also discovered that planets orbit the sun, not in a circle, but in an oval-shaped ellipse.

In Italy, Galileo Galilei looked in his telescope and, for the first time, saw mountains and valleys on the moon, spots on the sun, rings around Saturn, and moons orbiting Jupiter. He thus further proved that not everything in the universe revolved around the earth. He also disproved Aristotle by demonstrating that all objects fall at the same rate. His work,
published in 1632, created an uproar in European society. His challenge to the ancient worldview and church teachings was so upsetting that he was tried before the Inquisition and forced to recant his findings.

English scientist, Isaac Newton, built on the work of Copernicus, Kepler, and Galileo in the 1680s. He realized that the same force, gravity, that made objects fall to the earth also kept the planets in their orbits around the sun. He explained the laws of motion and developed mathematics to measure motion. With the discoveries of these scientists, educated Europeans no longer believed the universe was being held in place and order by God. They had to abandon ancient views of the universe and long-standing church doctrine. Instead, they began to acknowledge the workings of physics and new understandings brought about by the Scientific Revolution.

SSWH13 Examine the intellectual, political, social, and economic factors that changed the worldview of Europeans from the sixteenth century CE/AD to the late eighteenth century CE/AD.

b. Identify the major ideas of the Enlightenment from the writings of Locke, Voltaire, and Rousseau, and their relationship to politics and society.

John Locke, an English philosopher who lived through the English Civil War, argued that a contract existed between government and people. In this contract, the people gave up some rights to the government, but kept their “natural rights” of life, liberty, and property. The government, in turn, existed to protect these natural rights, which were superior to all laws and governments. Accordingly, Locke rejected absolute monarchy as a form of government. He believed individual rights are the foundation of society, argued for private property, and stood against taxation without representation. He also believed that subjects had the right to overthrow an oppressive government.

Voltaire, a French writer, used wit and satire to criticize the French monarchy, nobility, and church control. He wrote against the slave trade, inequality, prejudice, and bigotry. He vigorously defended religious freedom and the freedom of speech.

In contrast to other Enlightenment thinkers, Jean-Jacques Rousseau did not trust reason. He also stood against strong governments. He argued that while some government control is necessary, such rule should be kept to a minimum. Moreover, governments should be freely elected, and the collective good should be valued above that of individuals.

These Enlightenment thinkers heavily influenced revolutionaries around the world, including in America and France.

TEACHER NOTES
WORLD HISTORY

SSWH14 Analyze the Age of Revolutions.

Overview: Students will be expected to analyze the cause and effect of the disproportional distribution of political power and financial obligations to the state in a society. Students should explore the relationship between taxation and the distribution of power in society, and understand that when a segment of the population is alienated from power but expected to make economic contributions to the state or elite in the form of taxation or labor, revolution will very likely ensue. Students should also understand that societies that disproportionately allocate resources to a minority of the population are also prone to revolution. Further, students should explore the pattern of revolution and counter-revolution to understand that dramatic change in a society frequently inspires a backlash that is often violent and may restore, at least to some extent, that society to a pre-revolutionary status quo. In this unit, students will examine these patterns primarily in France with other examples provided in England, Russia, and the Americas.

SSWH14 Analyze the Age of Revolutions.

a. Examine absolutism through a comparison of the reigns of Louis XIV and Tsar Peter the Great.

Medieval European feudalism had placed the majority of political power in the hands of a vast and diverse landed nobility. Beginning in the 1300s, the kings of Europe began to consolidate their power, and by the late 1600s, some kings, including King Louis XIV of France, were able to wield almost total power over their states.

Louis XIV became king at age four in 1643. In his youth, the nobility of France violently resisted his minister’s attempt to consolidate political power in the name of the king. At times, this violence was so severe that it threatened the life of the young king. In 1661, Louis assumed power over government. With the memories of riots and rebellious nobles fresh on his mind, Louis was determined to consolidate his power over the state.

Louis’s power was threatened by three groups: the common people of France who could be quite dangerous when moved to rioting, the Catholic clergy, and the landed nobility. Louis devised effective strategies to deal with each of these threats. To deal with the threat of riotous commoners, Louis simply moved his palace out of their reach. In 1682, Louis moved his court and center of government to an enormous palace twelve miles outside of Paris called Versailles. The remote location of Versailles helped keep Louis safe from rebellious commoners. The loyalty of the Catholic clergy was solidified in 1685 when Louis announced the repeal of the Edict of Nantes, an 87-year-old decree of religious tolerance that allowed Protestants to worship freely. Louis’s repeal of the Edict drove Protestants out of France, hurting
the economy but pleasing Catholic leadership. The biggest challenge to Louis’s power was the nobility. Louis implemented a number of strategies to deal with them. First, Louis replaced most of his government officials with commoners called intendants. The intendants were much easier to control because they owed their status and power to Louis’s generosity and they could be dismissed, arrested and in extreme cases executed at will. Intendants collected taxes, administered justice, and served as the king’s council. To further control the nobility, Louis pressured the nobles to live at the Palace of Versailles with him. The enormous palace could house up to ten thousand people and its large staff organized lavish banquets, dances, and games that kept the nobility too busy to cause any trouble for the king. Historians have called the Palace of Versailles the amusement park of absolutism for its ability to neutralize potential threats to the king with entertainment.

Like Louis XIV, Peter the Great of Russia came to power during a period of political consolidation. The Romanovs of Russia like the Bourbons of France spent generations slowly wrestling power from a feudal nobility. Like Louis, Peter managed to build an absolutist state in which he wielded almost total power. However, the challenges that faced Peter were far greater than those that faced Louis. When Louis XIV came to power in 1643, France was already one of the most powerful countries in Europe with a modern army and navy and colonies in North America. Russia was only tenuously linked to the outside world by a small community of Dutch and German merchants in Moscow and a single port that was
frozen most of the year in Archangel. Russian society was still dominated by feudal tradition with a large and powerful landed nobility known as boyars who still depended on serfdom for labor. Like Louis, Peter’s power was threatened by this nobility and the Church clergy, in this case Eastern Orthodox instead of the Roman Catholic. Unlike Louis however, Peter also faced the challenge of geographic isolation and a need to modernize technologically, politically, and economically.

As a young man, Peter spent a great deal of time exploring the neighborhoods of Moscow were foreign merchants resided. From this experience he learned that Russia would have to look to the west instead of the east in the future. Shortly after taking power in 1696 Peter set off on a grand tour of Europe. Traveling in disguise, Peter studied the military, political structures, economy and cultures of the European states. Upon returning to Russia, Peter instituted a series of reforms to modernize and Westernize Russia and consolidate his power. To modernize and Westernize Russian society Peter established a newspaper, elevated the status of Russian noblewomen, ordered Russian boyars to wear European style dress and shave their traditional beards, and established schools of navigation, arts, and science with European trained faculties.

To consolidate his power over the nobility, Peter used a similar strategy as Louis XIV. Just as Louis removed the nobility from government positions and replaced them with intendants drawn from the commoners. Peter removed the nobles of the most powerful families from his government and council of advisors and replaced them with men from lesser families. He rewarded these new appointees with generous land grants which won their loyalty and respect. To deal with the power of the Orthodox Church, Peter abolished the position of patriarch, the traditional head of the church and replaced it with a Holy Synod that was directly under his control. With power firmly in his hands, Peter modernized the Russian army and built a navy which allowed Russia to take territory from Sweden and establish a warm water port at St. Petersburg. Peter ordered that the city at his new port be built in the western Baroque style as it would serve as his modern capital and “window on Europe”

Standard - SSWH14 Analyze the Age of Revolutions.

b. Identify the causes and results of the revolutions in England (1689), United States (1776), France (1789), Haiti (1791), and Latin America (1808-1825).

England (1689)

The causes of the Glorious Revolution in England date back to the first two kings of the Stuart Dynasty, James I and Charles I. By the early 1600s, a new form of Protestantism was taking hold in England, Puritanism. Puritans argued that the Church of England needed to be purified of Catholic ritual, James and Charles disagreed. James and Charles also struggled with their subjects over taxation. This conflict over taxation became particularly bad during the reign of Charles I. In 1628 Parliament refused to give the king money unless he signed the Petition of Right which placed several limits on the powers of the king. Charles signed the document but ignored it for the duration of his reign. Further, Charles I started to raise revenue without the consent of Parliament through fees and fines on the English people. This abuse of power provoked the English Civil War that lasted from 1642 to 1649.

Parliament defeated the king’s forces in the civil war and in 1649 King Charles I was beheaded for treason. The leader of Parliament’s military, Oliver Cromwell, took power and promised to create a republic but established a military dictatorship instead. This military dictatorship, called the Commonwealth, lasted until Cromwell’s death in 1658. In 1659 the English Parliament reconvened and voted to restore the Monarch. The oldest son of Charles I, Charles II was invited to take the throne. The relationship between Parliament the king during the reign of Charles II was generally congenial. Charles II agreed to a law that gave his subjects the right to habeas corpus and respected Parliament’s traditional right to control taxation.

In 1685 Charles II died and his Catholic brother James II became the king. James II was far less cooperative. He violated English laws, appointed Catholics to high office, and dissolved Parliament. This behavior led several members of Parliament to reach out to James II’s Protestant daughter Mary. In 1688 seven members of Parliament invited Mary and her husband William, the Prince of Orange to invade England and overthrow James II. James gave up without a fight and William and Mary became the king and queen of England in the Glorious Revolution.

William and Mary cooperated with Parliament and together they created a constitutional monarchy for England in which the monarch and Parliament required mutual consent to govern. Parliament drafted and the monarchs signed the English Bill of Rights which protected the rule of law and speech.

United States (1776)

By the mid-1700s the British colonies in North America enjoyed thriving economies and a great degree of political autonomy. The generally congenial relationship between the colonies and Britain began to sour after the French and Indian War ended in 1763. The war put Britain in a considerable amount of debt and the British Parliament believed that the colonies had a responsibility to help pay off this debt. Up to this point, Britain had only placed taxes on imports and left internal taxation to colonial assemblies to approve and levy. This tradition changed after the French and Indian War. Britain imposed a variety of revenue measures between 1763 and 1776 including the Stamp Act and Tea Act. The colonist, in part influenced by European Enlightenment ideas, rejected these taxes on the principle that they lacked representation in the Parliament that imposed them. Colonial protests against this taxation provoked a series of measures
designed to pressure the colonist into compliance. These measures included military occupation, closure of Boston harbor, and the suspension of colonial governments. The escalating conflict between Britain and the colonies culminated in the Declaration of Independence which was issued by the Second Continental Congress after a series of attempts at compromise failed. The Declaration of Independence, written by Thomas Jefferson, put the ideas of Enlightenment thinkers like John Locke into practice. The Revolutionary War ensued and by 1781 America emerged victorious and independent. The newly independent United States initially formed a weak central government under the Articles of Confederation but by 1788 formed a government that combined the principles of the Enlightenment philosophies of John Locke, Montesquieu, Rousseau, and Voltaire.

France (1789)

While the Glorious Revolution of England and the American Revolution successfully and permanently implemented the principles of the Enlightenment, the French Revolution’s success was short lived. French society on the eve of the revolution was deeply divided into three groups. The First Estate, less than one percent of the population, was made up of the Catholic Clergy. This small group controlled an enormous amount of wealth and about ten percent of the land in France. The Second Estate was also a small group, just over one percent, made up of the hereditary nobility. The nobles owned about thirty percent of the land and controlled most of the key government and military positions. The remainder of the population, including the urban middle class, poor, and rural peasantry constituted the Third Estate. France was ruled by Louis XVI who attempted maintain the opulence and absolutism of his grandfather Louis XIV but a massive national debt made this nearly impossible. Louis XVI’s attempts to deal with this debt set into motion the events that would lead to the Revolution.

In a desperate attempt to find a solution to the debt crisis, Louis XVI called together the French national legislature, the Estates General, in 1788. Inspired by the Enlightenment ideals of the American Revolution, the Third Estate used this as an opportunity to voice concerns about the abuse of power and mismanagement of state funds by the king. Some members of the First Estate joined with the Third Estate and called for the creation of a National Assembly to draft a constitution for France. This National Assembly hoped to make France a constitutional monarchy along the lines of Britain. In the hopes of stopping this, the king ordered the Third Estate locked out of the meeting of the Estates General. The Third Estate responded by finding an alternative location to meet, a tennis court. Here, they swore not to disband until France had a constitution. Meanwhile as the arguments of the Estates General spilled into the streets of Paris, mobs of poor Parisians stormed the Bastille on July 14th 1789. The Bastille, a prison and armory,
was an important symbol of the king’s power. With the National Assembly determined to write a constitution and the common people controlling the streets of Paris change was inevitable.

The National Assembly drafted the Declaration of the Rights of Man but Louis XVI continued to resist change. In October 1789 food shortages provoked the women of Paris to march on the King’s palace of Versailles to demand that Louis and his family return to Paris to help the people. Louis complied and for the next two years France was reshaped into a constitutional monarchy.

As the French Revolution became increasingly radical, neighboring kings began to worry that the revolution might spread. Threats from Prussia and Austria provoked war which embolden French nationalism and drove the Revolution even more radical. A new constitution abolished the nobility and confiscated Church lands. In 1792 Louis XVI attempted to escape to Austria where he hoped to gain assistance from the Austrian monarchy to restore his power in France. Louis and his family were captured during their escape attempt and the king and his wife Marie Antoinette were found guilty of treason and beheaded.

After the death of the king, France became a republic controlled by an elected National Convention. The dominant party in the National Convention, the Jacobins, was determined to radically transform France into utopian democratic republic of virtue that fully realized the ideas espoused in the Enlightenment. This government implemented radical change like forcing priests to marry, establishing a new calendar that counted forward from the founding of the Republic instead of the birth of Jesus, and transforming churches into Temples of Reason. This change was led by the leader of the Jacobin party Maximilien Robespierre. Robespierre felt that the greatest threat to the realization of the republic of virtue was from counter-revolutionaries inside France. He tasked the Committee of Public Safety with identifying and eliminating this threat. 40,000 people were executed by the Committee of Public Safety and 300,000 more were imprisoned during what came to be known as the Reign of Terror in France. Instead of suppressing counter-revolutionary sentiment, the Reign of Terror emboldened it. In July of 1794 the National Convention voted to arrest Robespierre, a few days later he was executed by guillotine.

With Robespierre gone, the National Convention began to undo the most radical changes of the Revolution. A new, more conservative and less democratic constitution was adopted and a new government called the Directory was formed. The Directory failed to restore security after the chaos of the Reign of Terror leading to a coup d'état by Napoleon Bonaparte a French General and the almost complete dismantling of democratic republican governance in France until the second revolution in 1848.

Haiti (1791)

The French Revolution spurred revolution in other parts of the world including in their colony Saint Domingue (Haiti). Saint Domingue was the most valuable colony among France’s overseas possessions. Slave based plantations produced sugar, cotton, indigo, and coffee. Like France on the verge of the Revolution, Saint Domingue’s population was also deeply divided. A small population of white plantation owners controlled the economy and government. A slightly larger free mixed-race population called the gens de couleur constituted a middle class, most of which was of modest means. The majority of the population was made up of African slaves. With the onset of the Revolution in France, the gens de couleur began to demand political equality. Unrest between the white population
and the gens de couleur created an opportunity for the slaves to rise in rebellion. In 1791 Toussaint L’Ouverture, a former house slave, organized the slave rebellion into an effective fighting force that was able free all of the slaves on the island. Meanwhile in France, the National Convention abolished slavery in all of France’s overseas possessions making the former slaves of Saint Domingue French citizens. Toussaint L’Ouverture was recognized by the French Republic as the leader of the colony. After Napoleon seized power in France and the radical reforms of the Revolution were undone he turned his attention to Saint Domingue. France was in desperate need of money; Napoleon hoped to supply that money by reestablishing slavery in Saint Domingue. In 1802 a French army invaded Saint Domingue but after two years of bloody conflict the French were defeated and Haiti declared itself an independent republic.

The Haitian Revolution had repercussions far greater than establishing the second independent republic in the Americas. The final defeat of the French in 1804 sent a flood of white refugees to the United States. These refugees spread the story of the successful slave revolt in Saint Domingue. These stories bred fear among the slaveholding population of the American south, leading to new legislation strengthening the institution of slavery in America. The fear of slave rebellion also spread to the other islands of the Caribbean. This fear greatly delayed independence movements in the island colonies as the white population feared that they would be unable to suppress a rebellion without the help of their mother country. The Haitian Revolution also caused the United States to double in size. After Napoleon lost Haiti in 1804, he decided to raise the money he hoped to earn in Haiti by selling the Louisiana Territory to the United States.

Latin America (1808-1825)

Like many pre-revolutionary states, Latin America was a deeply divided society. Political power was virtually monopolized by a European born elite known as peninsulars. Economic power and wealth was primarily in the hands of American born whites known as creoles. The rest of the population, the vast majority, was made up of mixed race mestizos, Indians, and free and enslaved Africans. The opportunity for revolution in Latin America came with Napoleon’s invasion of Spain and Portugal. The opportunity for revolution in Latin America came with Napoleon’s invasion of Spain and Portugal. Many of the creoles of Latin America were educated in Europe where they picked up the ideas of the Enlightenment. When the Spanish king was replaced with a Frenchman, these creoles refused to support the foreign monarch and revolution ensued. Early creole revolutionaries faced defeat because they failed to rally the mestizo, Indian and African populations to their cause. With time however, leaders like Simón Bolívar and José de San Martin built large armies in South America by promising Enlightenment inspired reform. Bolívar and Martin fought Spanish forces from 1811 to 1824 winning independence for all of Spanish South America. A similar, though more conservative process played out in Mexico leading...
to Mexico’s independence in 1821. The early revolutionary movement in Mexico started among the Indian and mestizo peasants in 1810 when a Spanish priest named Miguel Hidalgo led an attack on Mexico City. This peasant uprising scared the creoles who cooperated with peninsulares in putting it down. But, by the 1821 Mexico’s creoles were ready for independence which they achieved in September of 1821.

Brazil’s path to independence lacked the violence of the other independence movements of the Americas. The royal family of Portugal fled to Brazil after Napoleon’s invasion. In 1820, King John VI returned to Portugal to restore this power and left his son Pedro as regent of Brazil. Pedro was deeply inspired by the Enlightenment and declared Brazil an independent empire in 1822. Pedro proved to be more liberal and reform minded than his subjects which eventually led to his abdication in 1831. His son, Pedro II took power and ruled until 1889 when the monarchy ended and Brazil became a republic.

SSWH14 Analyze the Age of Revolutions.

Napoleon Bonaparte was a successful and popular general during the French Revolution. This popularity combined with the exhaustion that the French people felt after ten years of revolution gave Napoleon the opportunity to seize power in 1799. The French people were ready for a strong leader who could restore order. When Napoleon organized a military coup and took power, it was received with delight by the French people. A plebiscite held in 1800 confirmed this when the French people overwhelmingly voted to approve a constitution that gave almost total power to Napoleon as the First Consul of the French Republic. The French people’s love of Napoleon grew as he instituted a series of reforms that upheld the popular changes made during the revolution like equality under law and private property rights while rolling back unpopular changes like the restrictions on the Catholic Church. Napoleon also instituted a series of new reforms that proved very popular including a national bank, national public education, and the Napoleonic Codes that created a uniform system of law for the whole country. While the Napoleonic Codes limited civil liberties the order and prosperity that Napoleon brought to France ensured his popularity with the people.

Map of Europe when Napoleon was at his height of power.

Napoleon was so popular that in 1804 he was able to crown himself the Emperor of France with the support of the French voters. As emperor, Napoleon set out to create a true empire for France. In a series of military victories French armies defeated their European neighbors and created the largest European empire since Rome. Napoleon’s endless ambition proved to be his demise however. In 1812 he decided to lead an army of 600,000 into Russia to punish the country for selling grain to France’s enemy Britain. The Russian Czar ordered his troops to lure the French army deep into Russia and destroy everything as they retreated. In the fall of 1812 the French army took the city of Moscow, however before retreating the Russians burned the city. Lacking shelter, food, and supplies Napoleon was forced to order his army back to Europe. Marching back across Russia in November proved terribly destructive to Napoleon’s army. Men died from ambushes by Russian troops, exhaustion, hunger, and the cold. When Napoleon returned to France he only had 30,000 soldiers left.

After Napoleon’s defeat in Russia his European enemies banded together to remove him from power. A combined army of Russian, Prussian, British, and Austrian soldiers forced Napoleon to abdicate in 1814. Napoleon briefly went into exile on the island of Elba in the Mediterranean. He returned to France in 1815 and attempted to restore his power but he was finally defeated at Waterloo and permanently exiled to the island of St. Helena in the South Atlantic.

With Napoleon gone diplomats from Britain, Russia, Austria, and Prussia met at the Congress of Vienna. Their goal was to firmly squash the spirit of liberalism and nationalism that made the French Revolution and Napoleon possible. Generally, this goal was realized. While liberal nationalism led to revolutionary movements in Italy and Spain the conservative order established at the Congress of Vienna was able to dominate for the next 30 years.

SSWH15 Describe the impact of industrialization and urbanization.

Overview: Students will be expected to explain the process by which the production of goods shifted from small scale cottage industry to large scale factory production. Further, students are expected to explain the impact of this transition on population distribution, living standards, social class structures and economic and political philosophy. Students should understand that this period in history represents a major turning point in the development of society with far reaching consequences.

SSWH15 Describe the impact of industrialization and urbanization.
a. Analyze the process and impact of industrialization in Great Britain, Germany, and Japan.

While many of the key elements of industrialization, including mass production and mechanization, first appeared in Song China around the 12th century it was in 18th century Britain that sustained innovations in technology that led to dramatic and permanent transformations of society. Several factors converged to make Britain the birthplace of the industrial revolution. First, the British Isles were rich in many of the key ingredients to early industrialization including coal, iron, waterways, and harbors. Next, Britain experienced an agricultural revolution in the 18th Century. This agricultural revolution was made possible by the convergence of two events: exploration and enclosure legislation in the British Parliament. Exploration brought the Columbian Exchange which led to the introduction of new crops like potatoes and corn to the cool climate of Britain which increased agricultural yields. Large landowners pressured the Parliament to pass legislation that privatized common lands and allowed property owners to enclose these lands in fences and hedges. This enclosure and privatization of land increased the availability of land for exploitation and gave landowners the financial security needed to begin experimenting with innovative agricultural practices like the introduction of American crops, crop rotation, selective breeding, and the mechanization of planting. The agricultural revolution produced two other key ingredients in industrialization: capital and labor. Innovation in farming increased efficiency and output, this enriched property owners, increased population and displaced workers. Traditionally, the majority of Britain’s poor worked as tenant farmers on the large estates of the old nobility, but with the agricultural revolution many of these tenant farmers became unnecessary leading to a migration to urban areas where they became a reliable and affordable labor force.

Britain's abundant natural resources, capital, and a large labor force was marshalled to feed the ever increasing demand for manufactured goods both at home and abroad. At home, population growth fueled this demand and abroad British colonization of the Americas, the African slave trade and the Asian trade in luxury goods fueled the demand. Traditionally, British manufacturing was done in small batches in workshops and homes but beginning in the mid-1700s production began to shift to factories. In 1759 Josiah Wedgwood transformed the production of pottery by introducing division of labor. Each worker was given on small simple task in the manufacture of pottery. This change increased productivity and quality and decreased costs. Wedgwood became a model for mass production in Britain. Mechanization
of production quickly followed, this time in the textile industry. A rapid succession of inventions and innovations, including the spinning jenny in 1764, the water frame in 1769, the power loom in 1784, and the cotton gin in 1793 fully mechanized the production of cloth by the turn of the century.

Machines became more efficient, dependable and affordable with the regular use of iron, the introduction of steam power and use of interchangeable parts. While iron had been in use for thousands of years, its production up until the late 1700s was extremely labor intensive. Discoveries in the late 1700s allowed the iron workers to efficiently remove impurities greatly increasing output and bring down costs. In 1764, James Watts developed a steam engine that with time ended dependence on waterways for power and transportation. By the 1820s steam engines powered factories, trans-Atlantic ships, and railroads. In 1801, Eli Whitney, an American, introduced the use of interchangeable parts to the manufacture of firearms. Like the other innovations, interchangeable parts increased productivity and quality and decreased costs. The use of interchangeable parts spread to other industries quickly and after its adoption by British firms it became known in Europe and the “American system of manufactures.”

While the industrial revolution started in Britain, with time, the industrial powerhouse of Europe became Germany. In the 18th century, Germany, as a nation-state did not exist. Instead, the German speaking lands were divided into a multitude of kingdoms, principalities, duchies, and a variety of other forms of political union. The most powerful of these was the Kingdom of Prussia. In around 1835, Prussians with the support of their government began to study the British model for industrialization. They imported British machines, hired British engineers and sent their children to study industrial management in England. By the 1850s textile factories, iron works, railroads, and coal mines were, according to German economist Max Wirth “sprout[ing] from the earth like mushrooms.” By the turn of the century, Germany, now unified into a single German Empire, was a major industrial and military power in the world. By 1913, German industrial output surpassed Britain and was second only to the United States.

Industrialization in Europe and the United States created an endless demand for more raw materials to produce goods and more markets in which to sell those goods. This led to European and American imperialism in the mid-1800s. Africa and Asia fell victim to this imperialism with almost all of Africa, South Asia, Southeast Asia and coastal China under the control of either a European nation or the United States by 1900. In the midst of this scramble for colonies, Japan was faced with the very real possibility of becoming the victim of imperialism.

At the start of the 19th century, Japan was basically a feudal society loosely ruled by the
Tokugawa Shogunate. For the last 165 years Japanese law forbid most foreign interactions. While some legal trade and a fair amount of smuggling had kept Japan loosely connected with the outside world, this official isolation meant that Japan had missed most of the political, social and technological advances of the last 150 years. This meant that when the United States Navy showed up in 1853 to demand trading and docking privileges in Japan, the Shogun was in no position to refuse. The shogun accepted the Treaty of Kanagawa which opened Japan to US business interests. In 1864, British and French ships shelled the southwestern coast of Japan in retribution for Japan’s treatment of their nationals. This shelling, the provisions of the Treaty of Kanagawa and knowledge of the failures of China to repel European and American military force inspired a rebellion against the shogun who was seen by many as weak and incompetent. A brief civil war followed and in 1868 the shogun was removed from power and a new government was formed called the Meiji Restoration. While the leaders of this government claimed to be restoring power to the emperor, in reality he remained a figurehead and the country was ruled by a small group of oligarchs.

The Meiji government was determined to prevent Japan from falling victim to imperialism. To this end, they instituted a wide range of reforms designed to make Japan into a modern country in all respects. Hundreds of Japanese students were sent to study in the United States, Britain and Germany. American, British and German experts of all stripes were hired to come to Japan to train Japanese bureaucrats, military officers, educators, and students. A network of public education was established that included vocational, technical, and agricultural schools as well as research universities. Japan created a modern conscript army fashioned after Prussia, a modern navy fashioned after Britain, and a modern imperial government bureaucracy fashioned after Germany. The Japanese government established state owned factories that produced textiles and consumer goods for sale abroad. Once the profitability of these factories was secured, the state sold the factories to groups of private investors called zaibatsu. Profits from the sale of these factories funded the reforms allowing Japan to avoid dangerous foreign debt.

The efforts of the Meiji government were incredibly successful. Rather than become the victim of imperialism, Japan became an imperial power in its own right by 1900. In 1905, Japan shocked the world by defeating Russia in the Russo-Japanese War.

Many of the consequences of industrialization were common to all three of these countries. As already discussed, industrialization made each of these countries major military powers who used this power to establish overseas empires. For the British this empire include large parts of Africa, all of South Asia, and ports in China. The Germans held a colony in New Guinea and several colonies in Africa and Japan controlled Korea, Taiwan and Manchuria. At home industrialization undermined the old social order left over from each countries’ feudal past. The old hereditary nobilities’ influence declined as wealth shifted to a new urban middle class who managed and owned businesses. A new urban working class emerged that was ruthlessly exploited for their labor until they were able to organize and demand reforms. For some, industrialization brought a dramatic increase in their standard of living. Consumer products of all kinds became affordable and the quality and durability of these products increased dramatically. For others, factory work proved more dangerous and exhausting than farm labor leading to a decline in the standard of living. Globally, communication increased as steam power shortened trips across oceans and continents and the telegraph made instant global communication possible.

SSWH15 Describe the impact of industrialization and urbanization.

b. Examine the political and economic ideas of Adam Smith and Karl Marx.

The Industrial Revolution brought sweeping and rapid changes to people at all levels of society. Dramatic increases in the standard of living for some and decreases for others paired with the shift of economic and political power to the middle class left many reeling for an understanding of the new social and economic order. Contemporary discussions of this topic are often overly simplified focusing only on the most radical aspects of 18th and 19th century economic philosophy. While some early industrial societies did adhere to Adam Smith’s ideas on Laissez-faire in its pure form and some late industrial societies attempted to follow Karl Marx’s ideas on Communism with fidelity; the majority of the industrialized world found an equilibrium somewhere in the middle that included economic and political ideas beyond just those of Smith and Marx.

Smith’s ideas developed as a response to mercantilism. Mercantilist ideas on economic policy dominated Europe from 16th to the 18th century. These policies used state power to tightly regulate trade and business with the goal of accumulating gold and silver in the home economy. With the onset of industrialization in the late 18th century and the mass production of high value manufactured goods calculating wealth based solely on gold and silver reserves began to seem grossly inaccurate. In 1776, Adam Smith published The Wealth of Nations, in this work Smith argued that a nation’s wealth is best calculated by totaling the amount of goods and services produced by a nation’s people (essentially GDP). Considering this, he believed that government policies should be designed to increase wealth based on this new understanding. Smith believed that everyone, rich and poor, would benefit from this approach. In the The Wealth of Nations, Smith outlined the basic principles of Laissez-faire capitalism. He argued that individuals always work for their own self-interest and that in a society in which everyone is allowed to pursue their own self-interest, a collective benefit is realized. Essentially the argument was that when people work to improve their own lives they make life better for everyone else. For this societal benefit to be realized, Smith argued that the government should completely deregulate the economy. He believed that if business could be conducted free from government interference, a nation’s wealth (calculated based on the total about of goods and services produced) would be maximized. These ideas became government policy in Britain and United States in the 19th century, but over time they were modified with the principles of other economic philosophies like utilitarianism which accepted Smith’s ideas on personal freedom but argued that government needed to step in from time to time to protect the people.

The forerunner to Karl Marx’s communist philosophy was socialism. The economic principles of socialism were developed in the first half of the 19th century. Socialist thinkers like Charles Fourier and Henri de Saint-Simon argued that the major means of production like factories, mines, and railroads should be government controlled. Government control would ensure that the benefits of these means of production would be realized by all members of society. In 1848 Karl Marx and Friedrich Engels published The Communist Manifesto. This short work contained economic philosophy, social history, political ideologies and a revolutionary call to arms. In this work Marx and Engels argued that economic inequality was the most important force driving human history. Human history was a series of class struggles, Roman plebs versus patricians, feudal lords versus serfs, and in the 19th century the urban
working class (proletariat) versus the middle class (bourgeois). Marx and Engels predicted that the proletariat would rise in revolution and overthrow the capitalist order and over time create a utopian communist society. They believed that this revolutionary change would come in stages. First the workers would seize the means of production and overthrow the government. Once in control, workers would create a “dictatorship of the proletariat” which would seize all private property and re-distribute it equitably. Once equality was established the need for government would wither and humanity would live in a purely communist society where the means of production would be collectively owned and operated by the people for the public good.

While, few of the ideas of the early socialists or the communist ideas of Marx and Engels were implemented in the 19th century, in the 20th century many countries around the world experimented with these philosophies. Several countries, including to some extent the United States, implemented socialist policies related to state control of the means of production. For example, many railroad networks were brought under state control after the world wars. Marxist philosophies drove revolutions in other parts of the world, most notably in Russia and China. None of these revolutions were able to realize the full vision of the communist ideas laid out in the Communist Manifesto. Each revolution stalled at the stage of the “dictatorship of the proletariat” which in all cases devolved into a dictatorship of communist party bosses.

Reforms in the 20th and 21st century have balanced Smith’s argument for freedom with Marx and the socialist’s argument for equality in most states around the world. This has led to the prevalence of a hybrid system augmented by more recent scholarship in the fields of economics and political science for most countries.

SSWH15 Describe the impact of industrialization and urbanization.

c. Examine the social impact of urbanization, include: women and children.

The cities of industrialized nations grew at unprecedented rates in the 18th, 19th and 20th centuries. The impact of this rapid urbanization varied greatly by class. Families that owned and managed businesses enjoyed large homes, new churches, museums, trolley systems, and theaters all paid for with the profits from industrialization. Women in wealthy or middle class families might work for a few years before marriage but once married most conformed to the social norms of the day, called Victorian morality by historians. These social norms were based on the principle of separate spheres. According to this idea, men were uniquely suited for the demands of business while women best fulfilled the role of homemaker, mother, and moral arbiter of the family. The role of moral arbiter did give some women the opportunity to pursue leadership roles outside of the home in the many reform movements that emerged in this period. Some wealthy and middle class women became important leaders in reform movements. Among other things, these movements worked to end slavery, limit the use of alcohol, end child labor, improve the life of the urban poor, and win the vote for women. The children of wealth and middle class families, particularly boys, received quality educations that prepared them to work in the same roles as their parents.

For the working class, cities were crowded, pollution was common, housing was small and poorly built, and municipal infrastructure supported business interests more than quality of life. Rapid growth meant that urban planning was unusual and most cities were made up of narrow winding streets, shoddy construction, and lacked or had inadequate city services like water, sewers and policing. This made urban life dangerous for the working class. Disease and fire were common and working class neighborhoods were often so dangerous that they received nicknames like Hell’s Kitchen. Wages among the working class kept families in poverty and forced women and children into the workforce. A typical urban factory worker spent fourteen to sixteen hours on the job. This transformed family life like never before in human history. In agricultural societies, peasant families typically worked together and work hours that varied by season. Now men, women and their children worked in different facilities for most of the day year round. Women with young children might find work in the home, taking in laundry, sewing, or embroidery. However, wages were often so low that families had to send children to work as young as five years old. Most working class children grew up with no education and few options for escaping a future that mirrored that of their parents.

SSWH16 Analyze the rise of nationalism and worldwide imperialism.

Overview: Students will be expected to explain the factors that led to the rise of group identity in the 19th century and how this group identity manifested itself as nationalism. Students should focus on how threats from foreign powers drove the development of nationalism and how nationalism was harnessed by the state to build empires. Students should explore how 19th century nationalism was both similar to and different from earlier group identities that focused on loyalty to a ruler instead of loyalty to a group of people with a common identity (a nation). Further, students should explore the role of industrialization in the development of the second phase of imperialism in the 19th century and how this imperialism led to exploitation, violence, modernization and nationalist movements outside of Europe.

SSWH16 Analyze the rise of nationalism and worldwide imperialism.

a. Compare and contrast the rise of the nation state in Germany under Otto von Bismarck and Japan during the Meiji Restoration.

Germany as a political unit had only vaguely existed as the Holy Roman Empire before its rise as a modern nation-state in 1871. Japan on the other hand was generally unified under a feudal imperial system for more than 1,000 years prior to its emergence as a modern nation-state in 1867. In both cases, nationalism, rooted in a shared common identity, drove this unification. Also, in both of these cases, threats from foreign powers awakened this national pride which was then harnessed by an authoritarian government who used a combination of industrialization and military might to forge a modern nation-state.

Both the people of the German lands and the people of the Japanese islands shared a common identity that unified them culturally. While regional dialects existed in both areas, both the Germans and Japanese were generally unified by a common language family that differentiated them from neighboring people. Both regions also shared a common history, real and mythical stories of common ancestors provided another force for unification. Other common elements for culture, like religion and social customs, further served to create a sense of sameness that could be used to breed nationalism when threatened by outsiders.
For the German’s threats from abroad were largely manufactured by the authoritarian leader of unification, Otto Von Bismarck, the Prussian Prime Minister. Bismarck assumed leadership in the most powerful of the German states after a failed attempt at liberal reform. Bismarck, with the support of the Prussian King Wilhelm I, declared in 1862 that he would rule Prussia with "blood and iron," which he did quite efficiently. While the German speaking lands were loosely organized into a weak political union in 1815 called the German Confederation, this was dominated by Austria-Hungary. Bismarck was determined to create a German empire ruled by the Prussian King. To accomplish this, Bismarck incited three wars with neighboring states. Each of these wars stirred national pride among the German speaking states as Prussia easily defeated her enemies. First Denmark then Austria and finally France surrendered to Prussian armies. With each victory, more German states unified with Prussia and by January of 1871, King Wilhelm I became Kaiser Wilhelm the emperor of Germany which included almost all of the German speaking lands in Europe.

While Bismarck largely manufactured the foreign threats that inspired nationalism in Germany, the foreign threats to Japan were very real. Unlike Prussia, Japan was far from a great power in the mid-1800s. For more than 200 years, Japan had been mostly isolated from the outside world. Modest trade with China, Korea and the Dutch had not exposed Japan to the benefits of industrialization and as a result by 1850 Japan was still a feudal society with technology that matched. Japan was well aware of China’s defeats in the first Opium War and British, French, Russian, and American ships were regularly appearing on the horizon. Japan’s leader, Tokugawa Yoshinobu was ill prepared to deal with this threat. The situation became unsustainable in 1853 when the United States navy arrived in what is now Tokyo Harbor under the command of Commodore Matthew Perry. The large black naval ships powered by steam and armed with cannon shocked the Japanese who defended Japan with swords and bows. Perry brought a letter from President Millard Fillmore that asked Japan to open its ports to US trade. Perry told the Shogun that he would be back in one year with a larger fleet for the answer. Lacking the technology to defend Japan, the
Shogun agreed to the demands when Perry returned the following year. The capitulation of Yoshinobu coupled with British and French naval attacks in the south of Japan inspired indignation in the Japanese people. Like in Germany, foreign threats bred nationalism. In this case nationalism led to regime change as the Japanese people looked to their symbolic head of state, the emperor. Traditionally the Japanese Emperor wielded little to no political power. This tradition essentially stayed the same but the Emperor, Meiji as he came to be called, became a powerful symbol of unity and pride for the Japanese people. With this new sense of pride, the authoritarian oligarchies of the Meiji government was able to rally the people to the cause of reform. These reforms included industrialization, described in SSWH15a, political consolidation, and westernization.

As Germany and Japan evolved into modern nation-states, both turned to industrialization (see SSWH15a) to build powerful militaries. National pride and economic opportunity motivated both nations to turn to empire building. Germany built a vast empire in Africa and Southeast Asia while Japan took large parts of East Asia.

SSWH16 Analyze the rise of nationalism and worldwide imperialism.

b. Assess imperialism in Africa and Asia, include: the influence of geography and natural resources.

European and later American and Japanese imperialism in the 19th and 20th century was a natural outgrowth of industrialization. Business interests needed raw materials like metals, coal, rubber, cotton, and palm oil to mass produce goods in their factories. Then, to ensure sustained profits, new markets were needed to sell those goods. These economic factors combined with a new wave of nationalism to feed the mass production of military might which was used by the European, American and Japanese states to conquer and sustain vast empires. In 1815 Western European and North American states controlled 35% of the earth’s habitable territory, by 1914 these same powers controlled 85% of this territory. While industrialization added new motivations for this second wave of imperialism, many of the forces that drove the imperialism of the 16th century continued. Imperialist states continued to seek access to luxury goods and for the Europeans and Americans the motivation to spread Christianity continued.

While little justification beyond spreading Christianity was needed for 16th century Europeans, in the 19th century Enlightenment ideals made unjustified conquest morally troubling for some. To satisfy this moral dilemma, European and American imperialist presented two philosophies that justified their conquests. Some looked to Darwin’s book On the Origin of the Species and found in it a natural explanation for this conquest. They reasoned that if natural selection led to progress in the realm of biology the same would be true for society. Proponents of Social Darwinism argued that powerful American and European states were justified in their conquest by an evolutionary advantage. More sentimental imperialist argued for White Man’s Burden. According to this principle, imperialism was actually a benevolent act intended to help less advanced people catch up to the civilized world.

Europeans first established colonies in Africa in the 17th century. The Dutch established a colony in South Africa and the Portuguese formed a colony in Angola. The tropical regions were generally safe from European power because of the prevalence of tropical diseases like malaria. Medical advances in the 19th century like the use of quinine to treat malaria greatly reduced the threat of disease and shortly after, Europeans began the systematic conquest of the continent. The British arrived in the south in the early 1800s. British colonization pushed the descendants of Dutch settlers, called Boers north into the territory of the Zulu and Xhosa were they established two independent countries. The discovery of gold and diamonds in these territories brought war with the British and a dramatic expansion of British territory in South Africa. Around the same time, the French began a brutal campaign to take Northwest Africa and by 1880s France, Britain, Portugal, Belgium, Germany, Italy and Spain were racing to take over the continent in what is called the Scramble for Africa. The European powers met in Berlin in 1884 to devise a plan for European control of the continent. By the time they were
done, only two countries remained independent, Ethiopia which managed to modernize fast enough to fight off an Italian attempt at conquest and Liberia which was protected by the United States. Europeans began to drain African natural resources including palm oil, ivory, rubber, gold, diamonds, metals, and cotton.

The European rule in Africa was a mixture of economic exploitation, racist subjugation and well-meaning reform. While Belgium, Germany, and Portugal tended to be more ruthless and Britain and France more benevolent all of the Europeans contributed to economic exploitation, ethnic tension and modernization. Both natural resources and luxury goods were harvested and mined for the exclusive benefit of the European overlords. Ethnic tensions between African groups were exacerbated by poorly placed borders and sometimes exploited to facilitate European control. Violent conflict killed thousands as modern European armies crushed poorly equipped but determined Africans. However, at the same time, schools, hospitals, and infrastructure were built that became an asset to the African people. The slave trade was suppressed and in a few places educated African elite were allowed to help in administration. European rule spurred African nationalism, unified diverse peoples and eventually planted the seeds for independence in the 20th century.

Like Africa, imperialism in Asia dates back to the Age of Exploration. As with Africa, Europeans gained early footholds in Asia in the 1500s and 1600s but the vast Asia empires of the Europeans were not established until the 1700s and 1800s. First the Portuguese, then the Dutch and finally the French and British established colonies of varying size and consequence in Asia during this period.

While the Portuguese, Dutch, and French established coastal footholds in South Asia, it was the British who ended Mughal rule and brought all of South Asia into their empire. The colonization of South Asia was carried out by the British East India Company which was motivated by lucrative commodities like cotton, spices, tea, and opium. The British East India Company (BEIC) used a combination of diplomacy and warfare to gain control of India. By the mid-1700s the once powerful Mughal Empire had become highly decentralized, the BEIC capitalized on this and offered services including military protection, tax collection, and administration to local rulers in exchange for access to trade. Over time, the BEIC became the dominate power in the region and political power shifted from the Mughal Emperor and local rulers to the BEIC officers. To facilitate BEIC administration of such a vast territory, the company employed a multitude of both native administrators and soldiers (called sepoys).

The company’s control of South Asia brought a mixture of exploitation and benefit. Mismanagement and greed caused famines and cholera epidemics. The philosophy of “white man’s burden” brought schools, hospitals, and improved food distribution systems. Trade brought railroads and telegraphs.

Highly lucrative commodities like cotton and opium combined with India’s strategic location along trade routes to East Asia made India the “crown jewel” of the British Empire for over 90 years.

While decentralized political authority and lucrative commodities like cotton made Mughal India susceptible to European Imperialist, political arrogance and ignorance combined with lucrative goods like silk, porcelain, and tea made China a target. The Qing Dynasty of China continued to view their home as the Middle Kingdom surrounded by barbarians with nothing to offer the culturally superior Chinese. This attitude led to the creation of the Canton System. The Chinese government limited foreign merchants to a small number of ports, with Canton being the most significant. At these ports, merchants were only
allowed to purchase Chinese goods with silver bullion. When Western diplomats protested this trade imbalance and asked to the right to sell European goods in China, the Chinese government responded by dismissing the usefulness of European goods to the Chinese. To remedy this trade imbalance, the British turned to highly addictive opium, which they began to market for recreational use in Chinese ports. British marketing efforts were wildly successful and before long the trade imbalance was reversed and massive numbers of Chinese were addicted to opium.

Commodities like rubber, petroleum, and metals combined with a strategic location along key trade routes motivated Dutch, French, German, American and British corporations and governments to establish colonies in Southeast Asia.

SSWH16 Analyze the rise of nationalism and worldwide imperialism.
c. Examine anti-imperial resistance, include: Opium Wars, Boxer Rebellion, and the Indian Revolt of 1857.

During the early 1800s, British opium incapacitated Chinese workers and drained silver from the Chinese economy. In an attempt to stop the trade, which the Chinese considered illegal, the Qing trade commissioner seized large amounts of opium from British warehouses in Canton and destroyed it in 1839. This act provoked the first of two Opium Wars between the British and Chinese. The Qing Dynasty relied on a pre-industrial military that was no match for the professionalism and technology of the British Navy. The First Opium War ended in 1842 and the second in 1860. After both wars, the Chinese were forced to sign “unequal treaties” that opened more ports to Western trade, lowered tariffs, surrendered Hong Kong to the British, and legalized the opium trade.

After these defeats and a massive internal rebellion known as the Taiping, some Chinese officials believed that it was time for reform. A campaign for economic and military reform called the self-strengthening movement began but had little success because of opposition from the ruler Empress Dowager Cixi. Cixi instead placed her faith in a secret martial arts brotherhood known as the Society of the Righteous and Harmonious Fists, also known as the Boxers. The Boxers organized an ill-fated plan to drive foreign powers from China and restore the full glory of Qing rule. The Boxer Rebellion was crushed by a multi-national force that included several European nations, Russia, Japan and the United States. After this defeat, the Qing Dynasty was so weakened that it never recovered and a revolution in 1911 removed the last emperor from power and established the Chinese Republic.

In South Asia, British cultural arrogance combined with the British East India Company’s (BEIC) massive reliance on natives to staff their army brought rebellion in 1857. Rumors began to spread among the sepoy soldiers in the BEIC army that their religious beliefs and practices were being consciously ignored by their British officers. These rumors combined with years of Indian resentment to British rule led to a massive and bloody rebellion that took the company a year to suppress. This Sepoy Rebellion led the British government to seize control of the colony from the BEIC and for the next 90 years, South Asia was administered directly by the British government.

TEACHER NOTES
WORLD HISTORY

SSWH17 Demonstrate an understanding of long-term causes of World War I and its global impact.

Overview: Students will be expected to explain the convergence of industrialization, imperialism, nationalism, militarization, and the alliance system in the years leading up to World War I. Students should be able to explain how these factors created the “powder keg of Europe” in the Balkans that sparked the global conflict. Further, students should be expected to explore the impact of industrialization on warfare and compare this impact on the various battlefronts. Finally, students will be expected to analyze the impact of the war on the participate nations, focusing on how peace in World War I put into motion many of the developments that caused World War II.

SSWH17 Demonstrate an understanding of long-term causes of World War I and its global impact.

a. Identify causes of the war, include: nationalism, entangling alliances, militarism, and imperialism.

The cause of World War I was a complicated combination of factors that grew out of the European Industrial Revolution. As industrialization swept across Europe in the 19th century so too did an insatiable demand for raw materials and new markets. These demands pushed Europe into the second phase of imperialism that culminated in the almost complete colonization of Africa, Asia, and Australia. As the Europeans scrambled to conquer territory and establish colonies they came into conflict with each other, old land based powers like the Ottomans and Russians, and new powers like the Americans and Japanese. This competition for colonies combined with the manufacturing capacity brought by industrialization led to massive military build-ups. Militarism in industrialized nations created an intense competition to outgun rivals through the mass production of the tools of war. Militarism brought instability, leading European states to form military alliances aimed at balancing the power among rival states and maintaining peace in Europe. However, these alliances tended to be secret and unstable which had the effect of intensifying competition and distrust. This intensification, competition, and distrust fostered nationalism among both the great powers of Europe and suppressed ethnic groups like the Slavs.

European nationalism in the early 20th century became a force for unification and division. This contradiction proved to be very dangerous as the century progressed. As a force for unification, nationalism drove the cause of empire both at home and abroad. The German, Austro-Hungarian, Russian, and Ottoman Empires clung to lands inhabited by minority ethnic groups. Just as the threat of foreign domination inspired nationalism among the German people in the 19th century, in the 20th century this same force inspired Slavic nationalism. In the early 20th century the Slavic population of Europe was divided into a few small independent states like Serbia and larger empires like Austria-
Hungary. Serbia rose as the principal advocate for Slavic unity, much like Prussia had been for German unification. In June of 1914, a ultra-nationalist Slavic organization called the Black Hand organized and successfully carried out the assassination of the Austro-Hungarian crown prince Archduke Franz Ferdinand. The Black Hand hoped that this assassination would weaken Austria-Hungary’s hold on its Slavic territories and help create a unified Slavic state. Instead, it caused World War I.

While Austria-Hungary knew that the Serbian government had not been directly involved in the assassination, this did not stop them from directing their anger towards Serbia. Austria-Hungary made a series of humiliating demands of Serbia. Serbia turned to its ally Russia who promised to support them in the event of an invasion. Austria-Hungary turned to its ally Germany, Germany promised support. Austria-Hungary invaded Serbia, the tangled network of military alliances kicked in and the world was at war. Germany, Austria-Hungary, the Ottoman Empire, and Bulgaria fought together as the Central Powers and Britain, France, Italy, Russia, Japan, United States and several others formed the Allied Powers.

SSWH17 Demonstrate an understanding of long-term causes of World War I and its global impact.

b. Describe conditions on the war front for soldiers, include: new technology and war tactics.

World War I was fought on three principal fronts: the western front between France and Germany, the eastern front between Russia and Germany, and at sea between the British and Germany.

The Western Front quickly developed a reputation for slaughter. Known as the meat grinder, the Western Front was a 500-mile long network for trenches, bunkers, minefields, machine gun nests, and artillery that ran from Switzerland to the English Channel. The Western Front epitomized both the success and failure of early 20th century industrialized warfare. The mass production of weapons and ammunition made defensive positions easy to hold but weak transportation technology made offense difficult. As a result, the Western Front was generally a stalemate on which opposing armies hurled metal and poison gas at each other; this resulted in massive casualties on both sides but few territorial gains. Life on the Western Front for soldiers was quite horrible. Soldiers were confined to trenches and underground bunkers by the constant threat of artillery, gunfire and poison gas. Trenches were muddy leading to chronic foot infections known as trench foot, serious cases could lead to amputations. Vermin were everywhere and disease was common.

Fighting along the Eastern Front demonstrated the superiority of highly industrialized nations over their less industrialized counterparts. By 1914, Germany was an industrial powerhouse, however Russia was only in the most nascent phase of industrialization. As a result, Germany dominated the Eastern Front and Russia was only able to hold off German forces with superior manpower and support from their allies. In the end, Germany’s domination of the Eastern Front led to a revolution in Russia and Russia’s subsequent withdraw from the war in 1917.

The Allied victory in World War I was largely a result of the success of the British Navy. Britain utilized its vast surface flight and underwater mines to blockade Germany. This blockade cut off Germany’s access to its colonies and much need raw materials. Germany responded with an attempt to utilize its submarine fleet to blockade Britain. While Germany had some limited success with this blockade, it proved to be the deciding factor in bring the United States into the war. A German U-boat sank the passenger liner Lusitania in 1915 which had several American civilians on board. The sinking of the Lusitania was an important factor in shifting US public opinion towards war. The US entered the war in 1917 and with the support of American factories, the American Navy, and American soldiers the Allies were able to outlast the Central Powers leading to an Allied victory in 1919.
Beyond the primary areas of conflict in Europe and the North Atlantic battles raged in Africa, the Middle East and Asia. Soldiers from the European colonies served in these battles as well as on the Western Front. The deployment of troops from all over the world spread a particularly deadly strain of influenza. From 1918 to 1919 soldiers spread a strain of influenza that killed one in forty of those infected to almost every person on earth, killing more than 20 million people.

SSWH17 Demonstrate an understanding of long-term causes of World War I and its global impact.

c. Explain the major decisions made in the Versailles Treaty, include: German reparations and the mandate system that replaced Ottoman control.

When the war ended in 1919 the defeated Central Powers believed that all of Europe was equally to blame for the conflict and expected the peace terms to reflect this. When negotiations began at the Paris Peace Conference in 1919 it quickly became clear that the victors felt differently. The Allied negotiations at the Paris Peace Conference were dominated by the United States, Britain, France and Italy. Woodrow Wilson of the United States arrived at the conference with a plan, called the Fourteen Points, that was designed to make World War I the war to end all wars. The representatives of Britain, France, and Italy were less concerned with this idealistic goal and more concerned with punishing the Central Powers for causing the war. In the end the treaties that emerged from the conference included some of the idealism of Wilson’s Fourteen Points and a great deal of the punishment planned by the European representatives. While five treaties were actually negotiated and executed at the Paris Peace conference (one for each of the defeated nations), the treaty imposed on Germany, the Versailles Treaty, proved the most consequential.

Several of the ideas in Wilson’s Fourteen Points were realized by the Versailles Treaty. The League of Nations, an international body designed to prevent war by creating a forum for conflict resolution was established. Wilson’s beliefs about national self-determination were largely realized with the creation of the countries of Poland, Yugoslavia, Czechoslovakia, Finland, Latvia, Lithuania, Estonia, Austria, and Hungary out of lands once controlled by the German, Russian, and Austro-Hungarian Empires. In theory, Wilson’s calls for decolonization were heard with the creation of the mandate system. According to the treaty, the overseas colonies of Germany and the non-Turkish speaking lands of the Ottoman Empire were to become temporary mandates of the League of Nations. As a mandate, each of these territories would be temporarily assigned to one of the Allied powers, mostly Britain and France. The mandate holder was supposed to administer the territory temporarily while preparations were made for independence. In practice most of the mandates simply proved to be new colonies for the mandate holder. In the long-term, the mandates in the Middle East proved the most consequential. In the British mandate of Palestine, Britain promised in the Balfour Declaration to create a Jewish State, over time this created conflict with the Palestinian Arabs already living in the region.

Other provisions of the Treaty of Versailles reflected the strong belief by the British, French and Italian representatives that Germany should be punished for the war. These provisions included:

- The war-guilt clause that forced Germany to accept blame for the war.
- The loss of 13% of Germany’s total land area including Alsace and Lorraine.
- Disarmament which only allowed Germany to maintain a token army of 100,000 troops.
• $32 billion in reparations to be paid by Germany to Britain, France and Belgium.

These provisions designed to punish Germany humiliated the German people and laid the foundation for the rise of Hitler in the 1930s. Further they aggravated the United States Senate who refused to ratify the Treaty of Versailles. Without ratification, the United States never joined the League of Nations. Without the United States as a member, the League of Nations was severely weakened and failed to maintain peace in the years leading up to World War II.

SSWH17 Demonstrate an understanding of long-term causes of World War I and its global impact.

d. Analyze the destabilization of Europe in the collapse of the great empires.

With the Allied victory in the First World War, four great European empires came to an end. The German Reich under the Hohenzollern dynasty ended and was replaced by the Weimar Republic. The Weimar government was generally weak and ineffective because of a lack of public confidence and political infighting among the multitude of political parties. The Habsburg dynasty of Austria-Hungary fell as this empire was split into several successor states. Austria became a republic. Hungary went through a period of political instability during which it had succession of governments. In Russia, three hundred years of Romanov rule ended with the Bolshevik Revolution, replacing the tsars with communist party rule. In the territory lost by these empires several new nation-states were created, including Poland, Yugoslavia, Czechoslovakia, Finland, Latvia, Lithuania, and Estonia. Political, social and economic insecurity dominated in these new states in the years after the war. To the south, the Ottoman Empire ended in 1922 when the Ottoman sultan was replaced by the Turkish Republic.

TEACHER NOTES
WORLD HISTORY

SSWH18 Examine the major political and economic factors that shaped world societies between World War I and World War II.

Overview: Students will be expected to explain how the political legacy of the First World War converged with regional and global economic challenges like income inequality, inflation, and unemployment to undermine public confidence in many governments. Students should explore how the lack of confidence in government led to the rise of authoritarian and in some cases totalitarian regimes in Russia, Germany, Italy, Spain and Japan. Further, students will be expected to explain how the rise of these regimes led to World War II.

SSWH18 Examine the major political and economic factors that shaped world societies between World War I and World War II.

1. Determine the causes and results of the Russian Revolution from the rise of the Bolsheviks under Lenin to Stalin’s first Five Year Plan.

Nicholas II, the last tsar of the Russian Empire spent much of his early reign highly distracted by family concerns, including his son Alexei's hemophilia. This distraction was exacerbated by the royal family’s close association with Rasputin, a Russian peasant priest that claimed to talk to Mary and heal the sick. Rasputin was heavy drinker and a womanizer whose association with the family was exploited by political opponents. In addition to the personal failings of the tsar, the Russian state was severely outgunned as it faced more industrialized nations in war. First in the Russo-Japanese war, then in the First World War Russia was regularly humiliated by defeats. In both cases, Russia’s lack of industrial infrastructure and the weak leadership of the tsar led to these defeats. During World War I, military defeat was coupled with major food shortages leading to open rebellion in Russia cities. These rebellions culminated in the February Revolution of 1917 during which the tsar was forced to abdicate and a liberal Provisional Government was formed. While the Provisional Government attempted economic and political reform they were not enough for the Russian people. The Russian people wanted peace but this government continued the fight in World War I.

The systemic problems of a massive peasant population, lack of industrial infrastructure, and inequitable distribution of land combined with the immediate problems of food shortages and massive war causalities to lay the groundwork for a radical revolution. The radical revolution came in October of 1917 when the communist Bolshevik Party led by Vladimir Lenin seized power in a violent coup. A bloody civil war ensued between the Bolshevik forces known as reds and the tsarist and republican forces called the whites. The Russian Civil War lasted until 1920 when the reds emerged victorious.
Once firmly in power, Lenin set up a one party dictatorship and began the conversion of Russia (now called the Union of Soviet Socialist Republics) into a communist state. The conversion proved difficult because Russia could not easily conform the path laid out by Karl Marx and Friedrich Engels in the Communist Manifesto. The vast majority of the Russian population was made up of peasant farmers not urban industrial workers as Marx and Engels had predicted. In light of this, Lenin decided to slow the transition in 1921 by establishing the New Economic Policy (NEP) which was designed to gradually move the Soviet economy to centralized communist party control.

Lenin died in 1924 and a power struggle emerged between two of his closest associates, Joseph Stalin and Leon Trotsky. In 1928, Stalin orchestrated the exile of Trotsky and consolidated his control over the Soviet government. Stalin rejected the gradual path laid out in the NEP and instead organized a massive and rapid conversion of the Soviet economy and society into his vision of communism. This conversion was carried out through a series of Five-Year Plans. During the first Five-Year Plan, Stalin ordered the construction of massive industrial infrastructure including factories and transportation networks. To fund these projects, Stalin ordered the collectivization of agriculture. Private farms were replaced with massive state owned and managed collectives. The grain produced on these collectives was sold abroad and the funds were used to pay for industrialization. The export of this grain, resistance to collectivization and inefficiencies on collective farms led to massive food shortages in the Ukraine. From 1932 to 1933 more than four million Ukrainians died what was called the Great Famine.

Stalin used propaganda to create a powerful cult of personality that maintained his popularity despite the suffering he imposed on his people. Secret police rounded up political opponents, dissenters, and counter-revolutionaries. From 1936 to 1938 Stalin ordered the execution of about one million of his people and sent millions more into exile in Siberia. These efforts created a totalitarian communist state and made the Soviet Union into a global industrial power.

SSWH18 Examine the major political and economic factors that shaped world societies between World War I and World War II.

b. Describe the rise of fascism in Europe and Asia by comparing the policies of Benito Mussolini in Italy, Adolf Hitler in Germany, and Hirohito in Japan.

Fascism as a political philosophy was born in Italy in 1919 and spread to other countries in Europe and South America. A Fascist-like regimes emerged in Japan during the 1930s under the military dictatorship headed by Hideki Tojo. These regimes were characterized by ultra-nationalistic anti-democratic dictatorships. The leaders of these regimes argued that democracy was ineffective in solving the problems faced by a nation and that the glory and pride of a state was best maintained by a strong totalitarian leader.

In the case of Italy, Germany and Japan these regimes emerged out of democratic states after an economic crisis. In Germany and Italy, these economic crises were made worse by perceived national humiliations resulting from the peace negotiations after World War I. The treatment of Germany in the Treaty of Versailles enraged many Germans and Italy’s inability to gain land during the post-war negotiations angered many Italians. The inability of the democratic governments of Italy, Germany and Japan to solve the economic crisis and the blame that the German and Italian governments received for post-war humiliation ultimately led to their downfall.

Democracy failed in Italy first. Rising inflation and unemployment in the early 1920s led to social unrest and a rise in the influence of the Socialists and Communist parties in Italy. These conditions generated fear among the middle and upper classes who became impatient with the government's inability to maintain order and prosperity. Benito Mussolini’s Fascist party began to win support from these groups when Fascist party members known as Black Shirts began to attack Communist and Socialists on the streets. In 1922, with growing support from the middle and upper classes, Mussolini led a march of 30,000 Fascist party members on Rome. Fearing a revolution, King Victor Emmanuel III named Mussolini Prime Minister. Over the next several years, Mussolini consolidated his power as Fascist took control over the Italian parliament and seceded parliamentary authority to Mussolini. By 1925 Mussolini had almost complete control over government.

Now known as Il Duce, Mussolini built a totalitarian regime that abolished democracy, banned opposition political parties, jailed opponents, limited speech, censored the press, outlawed strikes, and utilized an intense propaganda machine to maintain the obedience of the citizenry. Though his methods were harsh, Mussolini was generally respected at home and abroad. Successful reforms modernized Italy with highway construction, industrial development, and literacy campaigns.

The failure of democracy in Germany and Japan came with the onset of the Great Depression. Inspired by Mussolini, Hitler formed the National Socialist German Workers Party (Nazi) in 1919 and in 1923 he tried to replicate Mussolini’s success in the March on Rome with a coup attempt in Munich. The Beer Hall Putsch as it is now called was a failure and resulted in a prison sentence for Hitler. Hitler served nine months of his five-year sentence during which he authored Mein Kampf a manifesto of his political beliefs and goals. In Mein Kampf Hitler reiterated Mussolini’s ideas about the weakness of democracy, and communism. He agreed with Mussolini’s conclusion that an ultra-nationalist dictatorship by a single strong leader was the best way to maintain order and restore the pride and prosperity of the state. However, Hitler augmented Mussolini’s Fascist Party platform with the principle of German racial superiority. Hitler argued that the German people (along with a few other northern European populations)
were the members of the ancient Aryan “race” and therefore naturally superior to the rest of the world’s population. In Mein Kampf, Hitler established the basic goals of the Nazi party. Like the Fascists of Italy and the Militarists of Japan, the Nazis would end democracy, build a strong military, use government power to improve the economy, and expand their territory. Hitler, Mussolini, and Tojo (supported by Hirohito) all believed that their nation’s success depended on the conquest of new territory.

Hitler’s rise to power was very similar to Mussolini. During the 1920s Hitler built a power base that included a Nazi Party militia called the Brown Shirts. Like the Black Shirts of Italy, Hitler’s Brown Shirts used the threat and sometimes actual violence to win political influence. After the collapse of the German economy in the Great Depression the Nazis became Germany’s largest political party. Like in Italy, they gained support from the middle and upper classes by opposing the threat of a communist revolution. In 1933, President Paul von Hindenburg named Hitler chancellor (a position similar to prime minister). Hitler immediately called for new elections for the Reichstag or German parliament. He hoped that his increasing popularity would lead to a Nazi majority. Six days before the election the Reichstag building mysteriously caught fire. Nazi party leaders blamed the fire on the Communist Party and called on citizens to elect Nazis to protect the nation from the threat. Nazis won a slim majority in the Reichstag and like in Italy they began to vote to secede their power to Hitler. In 1934, Hitler was named Führer, taking complete control of the German government. Like Mussolini he built a totalitarian regime that abolished democracy, banned opposition political parties, jailed opponents, limited speech, censored the press, outlawed strikes, and utilized an intense propaganda machine and police force to maintain the obedience of the citizenry. And, like Mussolini, Hitler enjoyed widespread support because of successful reforms that dramatically reduced unemployment, increased industrial output and improved infrastructure.

Unlike Italy and Germany, Japan never had a single man with total government control. Instead a small group of military leaders ruled with the support of the Emperor Hirohito. Of these men Hideki Tojo emerged as the most powerful. In the Japanese parliamentary democracy of the 1920s the civil government had no control over the military. According to the constitution, the military reported directly to the Emperor. Traditionally the Japanese emperors did not yield power, this meant that the military was essential independent in its authority. Until the Great Depression, the military generally respected the authority of the civil government over the affairs of the Japanese state but when economic hard times turned the Japanese people against the civil government in 1929, the military stepped into take control. Social unrest and popular support facilitated the militaries gradual seizure of power. By 1931,
the military invaded Manchuria without the authority of the civil government and by 1941 Hideki Tojo, the head of the military became prime minister.

Like in Italy and Germany, militaristic nationalism supported the power of the new regime. In Japan this nationalism was supported by a religious movement, State Shinto. State Shinto gave the Japanese regime a race based political ideology similar to the Germans. As Nazism argued that the Germans were entitled to build an empire in Europe based on their perceived racial superiority, State Shinto argued that the Japanese were a master race destined to rule Asia.

Like their counterparts in Europe, the Japanese regime commanded the obedience of the population and enjoyed widespread popularity because of their success in coping with the Great Depression.

SSWH18 Examine the major political and economic factors that shaped world societies between World War I and World War II.

c. Describe the nature of totalitarianism and the police state that existed in the Soviet Union, Germany, and Italy and how they differ from authoritarian governments.

The totalitarian regimes of the Soviet Union, Germany and Italy utilized three tools to exert control over both the state and the population. These tools include extensive networks of police that operated both publicly and in secret, state run propaganda networks that controlled the flow of information and built powerful cults of personality around the leader, and complex layers of legislation that legalized the dictatorial rule of the head of state and limited the civil liberties of the rest of the population.

The NKVD in the Soviet Union, the Gestapo and SS in Germany, and the OVRA in Italy served as the eyes and ears of Stalin, Hitler and Mussolini respectively. Each dictator maintained an extensive network of police that had the authority to use covert methods to monitor the civilian population. These police networks benefited from a truncated judicial system that allowed for swift punishments that included death, prison, forced labor, and exile. While all three used internment camps to house political dissidents, Germany and the Soviet Union interned dissidents at levels unprecedented in human history. German concentration camps and Soviet gulags housed millions of German and Soviet citizens who challenged or were simply accused of challenging the authority of the regime.

State run propaganda networks like the Reich Ministry of Public Enlightenment and Propaganda in Nazi Germany controlled the flow of information to the population. Soviet, German, and Italian propaganda departments censored foreign and domestic media, eliminating anything deemed unfit or dangerous to the regime. State agencies in all three countries produced print, audio, and film media designed to indoctrinate the population and glorify the leader. In the Soviet Union, the glorification of Stalin was so successful that inmates sentenced to years of forced labor in Siberian gulags often wrote letters to Stalin asking for help, falsely believing that their misfortune was the product of a mistake not the policies of the leader.

The Communist, Nazi, and Fascist Parties in each country utilized the legislative bodies of each state to pass legislation that transferred massive power to the leader and severely limited the civil liberties of the population. Freedoms of speech, assembly, and the press were severely reduced in each country.
The extent of power wielded by these totalitarian regimes far surpassed the scope of power held by other authoritarian regimes. While authoritarian monarchs and dictators have managed to take almost complete control over government in most phases of human history, there are few examples of states like Nazi Germany, the Stalinist Soviet Union, and Fascist Italy in which the leader was able to wield extensive power over both the government and the population.

SSWH18 Examine the major political and economic factors that shaped world societies between World War I and World War II.

d. Explain the aggression and conflict leading to World War II in Europe and Asia; include the Italian invasion of Ethiopia, the Spanish Civil War, the Rape of Nanjing in China, and the German violation of the Treaty of Versailles.

World War I left many feeling like war no longer had a place in society. Attempts were made to reduce the likelihood of conflict including the creation of the League of Nations and the Kellogg–Briand Pact which renounced war as a tool of state. These efforts failed; by the 1930s a series of regional conflicts began. Over the course of the decade, these regional conflicts drew the attention of an increasing number of global powers and by the 1940s they culminated in the Second World War.

In 1931, Japan invaded the northern Chinese territory of Manchuria. Japanese business interests were heavily invested in the regions iron and coal resources. The Japanese military used an explosion along a Japanese owned railroad in the Manchurian town of Mukden as a pretext for invasion. Once in control, the Japanese set up a puppet government to ostensibly give Manchuria independence. Members of the League of Nations saw the invasion for what it was, Japanese imperialism. The League demanded that Japan withdraw from Manchuria. Japan opted to stay in Manchuria and withdraw from the League of Nations instead. The Japanese invasion of Manchuria was the first in the series of regional conflicts that led to World War II.

Encouraged by the League’s failure to contain Japanese imperialist ambitions in Asia, Benito Mussolini of Italy ordered an invasion of Ethiopia in 1935. Like the Japanese, Mussolini sought to glorify his nation through imperial conquest. Further he wished to avenge an Ethiopian defeat of Italy in the 1890s. Haile Selassie, the emperor of Ethiopia, appealed to the League of Nations for help. The League condemned the invasion but none of the great powers did anything to stop him. In fact, the British allowed the Italian military to use the Suez Canal to move supplies and troops to East Africa for the invasion.

In the same year that Mussolini invaded Ethiopia, Hitler announced that Germany would no longer obey the troop limits placed on them by the Treaty of Versailles. The League condemned this move but did nothing. In March of 1936, Hitler violated the treaty again by moving German troops into the demilitarized buffer between Germany and France called the Rhineland. While the move stunned members of the League, they took no action. Britain argued for a policy of appeasement in the hopes of

Without the United States as a member, the League of Nations was largely ineffective. Artist: Leonard Raven-Hill, 1919
maintaining peace. In October of ‘36 Germany and Italy formed an alliance to which they added Japan in November forming the Axis Powers.

In July of 1936, Francisco Franco a Spanish General led a revolt against Spain’s Republican government. Franco and his supports in the military wished to establish a fascist regime similar to that of Hitler and Mussolini. A civil war broke out that lasted until Franco’s victory in 1939. Mussolini and Hitler sent troops and equipment to support Franco during the civil war; only the Soviet Union supported the forces of the Spanish Republic.

In 1937 German and Japanese aggression continued. In July of 1937 Japan mounted a full scale invasion of China. The better equipped Japanese forces advanced quickly and by December of 1937 they took the Chinese capital city of Nanjing. In what is called the Rape of Nanjing, Japanese troops killed 200,000 prisoners of war and civilians and raped 20,000 women. The treatment of Chinese civilians in Nanjing was savagely violent and public with many photographers recording the carnage.

In November 1937 Hitler announced plans for the Anschluss, the unification of Germany and Austria. While this move was prohibited by the Treaty of Versailles, Hitler carried out the annexation of Austria in March of 1938 with little resistance from other European nations. Next he turned to the German speaking region of Czechoslovakia called the Sudetenland. Hitler demanded that this land be turned over to Germany in September of 1938. German, French, British, and Italian leaders met to discuss these demands in Munich. Hoping to maintain peace through appeasement, France and Britain agreed to the German annexation of the Sudetenland at the Munich Conference. In March of 1939 Hitler took all of Czechoslovakia. With this move it became increasing clear that appeasement would not prevent war; Britain and France pledged to declare war on Germany if Hitler threatened Poland.

SSWH19 Demonstrate an understanding of the global political, economic, and social impact of World War II.

Overview: Students will be expected to explain how cooperation by the Allied powers during World War II led to the defeat of the Axis powers. Further, students should examine how cooperation between the United States and the Soviet Union broke down in the final days of the war leading to the tensions that caused the Cold War. Students are also expected to explain the impact of the war on the civilian population, with special attention to those that fell victim to the Holocaust. In the years following the war, students are expected to explain how post-war political and economic tension led to the spread of both capitalist democracy and communism. Further, students should examine how the spread of democracy and communism led to the creation of multi-national military and diplomatic alliances aimed at keeping peace.

SSWH19 Demonstrate an understanding of the global political, economic, and social impact of World War II.

a. Describe the major conflicts and outcomes, include: North African, Pacific, and European theatres.

In August of 1939, Hitler and Joseph Stalin signed a nonaggression pact in which they agreed not to go to war and to divide Poland. In September of ‘39 Germany’s army advanced quickly into Poland utilizing a strategy that would, by 1941, facilitate the German conquest of most of Europe - the blitzkrieg. In the blitzkrieg Germany airplanes and tanks advanced quickly surprising the enemy before they could mount an effective defense. A massive infantry force followed and secured German control of the territory. Britain and France declared war on Germany after the invasion of Poland but little happened until April of 1940 when Germany invaded Denmark and Norway. With this invasion, full scale war erupted in Europe. German forces moved quickly, by 1941 all of continental Europe with the exception of the neutral countries of Sweden, Switzerland and Spain were under Axis control. Axis armies also controlled most of North Africa. While Britain remained free, the Nazi air force began a devastating bombing campaign of British infrastructure and cities. While the Battle of Britain was terrible for British civilians it was unsuccessful in forcing a British surrender. In May of 1941, Hitler called off the attacks deciding instead to focus on Eastern Europe. In June of 1941, Germany violated the non-aggression pact and invaded the Soviet Union.

In the Pacific, the Japanese navy advanced quickly through the islands of the South Pacific. While the United States was officially neutral, it was aiding the Allies in Europe with war material through the Lend-Lease Act and attempting to slow the Japanese advance in the Pacific with an oil embargo. On December 7, 1941 the Japanese attacked the United States at Pearl Harbor, bring the US into the war. The Japanese followed this attack with invasions that brought virtually all of Southeast Asia under their control.
The Allies focused on the defeat of the Axis powers in Europe first. Hitler’s invasion of the Soviet Union proved to be the first step in his defeat. The vastness of territory, massive manpower, and extreme cold gave the Soviets an advantage that allowed them to stop the German advance along a front that ran from Leningrad to Moscow to Stalingrad. By fall of 1942 the Axis powers of Europe faced defeats in North Africa and by the winter of ’43 the Soviets began to push Axis armies back in the Battle of Stalingrad. North Africa was liberated from Axis control in May and an Allied invasion of Italy began in July of 1943. In May of 1944, a massive force made up of British, American, Canadian and French troops landed on the coast of Normandy in France. This D-Day invasion surprised the Germans who expected the invasion to come 300 km to the northeast near the French port of Calais. From Normandy the Allies moved south and liberated Paris then turned east moving toward Germany. Meanwhile Soviet troops moved into Poland and Romania. The Allied advance from the west was slowed briefly by a German offensive in the Ardennes Forest leading to the Battle of the Bulge. But, by early spring of 1945 the Allies entered Germany from both the east and west and on May 7, 1945 Germany surrendered unconditionally. In the midst of this defeat, Hitler committed suicide in his underground bunker in Berlin.
Allied success in the Pacific came in May of 1942 at the Battle of Coral Sea where they stopped the Japanese advance to the south. In June the Allies stopped the Japanese advance east at the Battle of Midway. After Midway the Allies began an offensive against the Japanese using a strategy called island-hopping. The allies would bypass islands on which the Japanese had established extensive defenses and focus instead on poorly defended islands close to the Japanese mainland. While this strategy worked it was slow and brutal leading to many casualties on both sides. By the fall of 1944 the Japanese navy was severely weakened leaving Japan’s defense to the army. In desperation the Japanese deployed kamikaze pilots who flew suicide missions to crash bomb laden planes into American ships. American forces continued their advance toward the Japanese homeland, taking Iwo Jima in March 1945 and Okinawa in June. America advisors told President Truman that a land invasion of Japan would lead to massive causalities. Truman decided instead to use the recently developed atomic bomb. On July 26, 1945 President Truman issued the Potsdam Declaration in which he told Japan to surrender or face "prompt and utter destruction." Japan refused and on August 6, 1945 the United States dropped an atomic bomb on the Japanese city of Hiroshima, killing more than 70,000 people. On August 9 the US dropped a second bomb on Nagasaki, killing 70,000 more. Japan surrendered on September 2, 1945.

b. Identify Nazi ideology and policies that led to the Holocaust and its consequences.

In Mein Kampf Hitler defined Nazi racial ideology. According to the Nazi party, the Germanic people of Europe were the only pure descendants of the ancient Aryans. Nazism argued that the success of the Aryans in spreading their language across Eurasia was proof of their superiority. Modern Germanic peoples inherited this superiority and as a result were entitled to become a master race. Non-Aryan peoples were ranked. Some groups were considered tolerable, while groups like the Slavs were considered naturally inclined to slavery, the Roma were considered genetically criminal, and the Jews were considered dangerous. Germanic people who threatened the purity and security of the race were also viewed as a danger. Germans with severe congenital disabilities, mental illness, and criminal backgrounds were considered a pollutant to the German bloodline. Homosexuals were viewed as a threat to the virility of the race. Over the course of Nazi rule a variety of policies were put into action in response to these ideas.

Approximately 100,000 German men were arrested for homosexuality between 1933 and 1945. While most homosexuals were held in traditional prisons between 5,000 and 15,000 were interned in concentration camps where they were used as forced labor. Starting in 1934, 300,000 to 400,000 people were forced to undergo sterilization procedures either because of a disability or their ethnicity. Around 200,000 disabled and mentally ill Germans were executed between 1940 and 1942 during Nazi euthanasia programs. In the mid-1930s, Roma populations in Germany were corralled by police and forced into government camps. Around 1940 the Nazis began sending the Roma to concentration camps where they were used as forced labor, subjected to bizarre research by Nazi doctors or executed. By the end of the war, as many as 200,000 European Roma were dead. When the Nazis invaded Poland in 1939 they began to systematically execute Polish Catholic professionals, teachers, and government leaders. The Nazis believed that without leadership, the Polish people would easily submit to slavery. Approximately 3 million Polish Catholics were dead by the end of the war. Several thousand German and Austrian Jehovah's Witness were arrested in the late 1930s for refusing to swear loyalty to the state. Many of these Witnesses were subjected to forced labor in concentration camps, more than 1,000 died in these camps.

While the Nazis targeted many groups in the Holocaust, the Jewish population of Europe was targeted with particular fanaticism. Hitler exploited long held anti-Semitic feelings in Europe, arguing that the Jewish population was at fault for most of the country’s hardships including defeat in World War I and
the financial crisis of the Great Depression. Hitler argued that Jewish people were dangerously clever and worked in collusion to exploit the non-Jewish population of Europe. When Hitler took power in the 1930s he planned to drive the Jewish population out of Germany. In 1935 the Nuremberg Laws revoked German citizenship from the Jewish population. Subsequent laws restricted Jewish business activities and tightly regulated financial transactions. Hitler and the Nazi Party hoped this would pressure the Jewish population to leave Germany, many did; but by 1940 most of the world refused to accept any more German Jewish immigrants. In November of 1938 Nazi party members systematically attacked Jewish owned property all over Germany. The windows of Jewish businesses, homes, and synagogues were smashed leading to the name Kristallnacht or the night of broken glass. The following year, Nazi party officials began forcing the Jewish population into walled ghettos in German and Polish cities. As the ghettos became overcrowded and the war raged on, Nazis built massive concentration camps in Germany and Poland where Jews from all over Europe were sent to work as slave laborers. In 1942, Nazi leadership decided to carry out the “final solution to the Jewish problem,” the systematic execution of the Jewish population of Europe. Before ’42 Nazi SS units killed Jews with firing squads and mobile gas chambers in box trucks but these methods were deemed too slow. In 1942 massive complexes were built designed to kill and incinerate of up to 12,000 people per day. Most of these were in Poland. Inmates arrived from all over Europe, those deemed fit enough to work became slave labor, the weak were sent to gas chambers. By the end of the war 6,000,000 Jewish people were dead.

SSWH19 Demonstrate an understanding of the global political, economic, and social impact of World War II.

c. Analyze the impact of the military and diplomatic negotiations between the leaders of Great Britain, the Soviet Union, and the United States.

The first significant meeting between the leaders of Great Britain, the USSR, and the US took place in 1943 in the city of Tehran. Roosevelt, Churchill, and Stalin discussed plans for the invasion of northern France and another Soviet offensive in the east. The Soviet Union agreed to join the war against Japan following the defeat of the Axis Powers in Europe.

Roosevelt, Churchill and Stalin met again in February of 1945 in the Soviet resort town of Yalta. By this time, the allies were confident that the defeat of the European Axis Powers was within reach. At this conference the allies discussed the future of Germany, Austria and Eastern Europe. The allies agreed to divide Germany and Austria into four occupational zones, the Soviet Union, America, Britain or France would each take responsibility for one of the zones. The capital of Berlin would likewise be divided. The Soviet Union agreed to allow free elections in all of the Eastern European countries that it liberated from Nazi control. Further, the Allies agreed to the basic structure of the United Nations. The US, Britain, France, the Soviet Union and China would each be given a permanent seat on the Security Council and the power to veto any UN action. Stalin also reaffirmed the Soviet Union’s commitment to declare war on Japan.

The final major meeting of the leaders of the US, Britain, and the Soviet Union was held in Potsdam, Germany in July of 1945 after the Nazi surrender. Roosevelt died in April of 1945 so he was replaced by Harry Truman and Churchill was replaced after an election by Clement Attlee. At this meeting the allies implemented their plans for the division of Germany into occupied zones and agreed to the demilitarization of Germany. Further they developed a plan to purge Nazi elements from German society with a system of courts (the Nuremberg Trials) designed to identify, try, and punish war criminals. However, Stalin reneged on his promise to allow free elections in Eastern Europe kicking off the Cold War. Britain, the US and China issued the Potsdam Declaration in which they threatened Japan with “prompt and utter destruction” if they did not surrender immediately.

SSWH19 Demonstrate an understanding of the global political, economic, and social impact of World War II.

World War II left much of Europe in ruins, areas that were not physically destroyed suffered from economic hardship and political distrust. In this environment of economic and political instability many Europeans turned to the Communist Party. President Harry Truman declared in the Truman Doctrine in March of 1947 that the United States would work to prevent the spread of communism. To this end, the US Secretary of State, George Marshall proposed a $12.5 billion plan to rebuild Europe. Congress approved the plan after the fall of Czechoslovakia to Communist in 1948. The plan was a great success, the European economy recovered quickly and Communist Parties declined in popularity across Western Europe.

Like Europe, Japan was also in ruins after the war. The United States took responsibility for the post-war occupation and administration of Japan. This occupation was overseen by General Douglas MacArthur. MacArthur designed a plan that would democratize Japan, stimulate economic growth and prevent future Japanese aggression. The wartime leaders of Japan were arrested and put on trial for war crimes. Seven of the most egregious offenders were put to death. The emperor was spared from trial and allowed to remain on the throne. MacArthur’s investigators claimed that Emperor Hirohito was only a figurehead and did not direct the Japanese government during the war. Hirohito’s innocence is still a matter of debate among historians. MacArthur did substantially decrease the Japanese emperor’s influence in Japanese life and government however. Hirohito had to renounce both his claim to divinity and all rights to direct the actions of government. MacArthur and his advisors wrote a new constitution for Japan that made it into a constitutional monarchy like Britain. A two house legislature elected by all citizens over the age of 20 would run the country. A bill of rights protected the basic freedoms of the Japanese people.

To stimulate economic growth and opportunity in Japan, MacArthur developed a plan to redistribute land. Large landholders were required to sell their holdings to the government who in turn sold it at low cost to former tenant farmers. MacArthur also allowed factory workers to create independent labor unions.
Japan was permanently demilitarized. The Japanese armed forces was disbanded immediately after the war and a provision was written into the constitution forbidding offensive war and the maintenance of a military with offensive capabilities.

The failure of the League of Nations to prevent World War II led to it being disbanded and replaced by the United Nations in 1946. The United Nations was chartered in 1945 and like the League was designed to prevent war. The founders of the United Nations attempted to remedy some of the weaknesses of the League of Nations by giving the United Nations the power to enforce its decisions. The UN was organized into two bodies, the General Assembly in which all member countries were given an equal vote and the Security Council. The principle role of the General Assembly included wielding international opinion. The Security Council was given the power to issue enforceable directives. The Council included eleven members, six elected by the General Assembly and five permanent members with veto power. The five countries given permanent seats in the Security Council were the United States, the United Kingdom of Great Britain, France, the Union of Soviet Socialist Republics, and the Chinese Republic. Today the seat of the USSR is held by Russia and the seat of the Chinese Republic is held by the People’s Republic of China.

The post war tensions between the United States and the Soviet Union came to a head in June of 1948. The Soviet Union responded to the American, British and French decision to allow West Germany to reunite and become an independent country by blockading West Berlin. Berlin was located inside of the Soviet occupied zone of Germany. In June of 1948 the Soviet Union attempted to force the United States, Britain and France into allowing the USSR to take control of West Berlin. They did this by closing off all land access to the city. The US and Britain responded by airlifting supplies into the city. The airlifts lasted until May of 1949 when the Soviet Union finally backed down and reopened land access. The tension caused by the blockade of Berlin resulted in the formation of the North Atlantic Treaty Organization (NATO). Ten western European nations plus the US and Canada formed a military alliance in which they agreed that an attack on one would be considered an attack on all. The NATO alliance went far in mitigating the threat of Soviet aggression in Europe but also increased Cold War tensions. In 1955 the Soviet Union formed its own military alliance known as the Warsaw Pact. Seven Eastern European countries joined with the USSR in this alliance.

SSWH20 Demonstrate an understanding of the global social, economic, and political impact of the Cold War and decolonization from 1945 to 1989.

Overview: From 1945 to the 1980s the United States and the Soviet Union were bitter rivals competing for global influence. This rivalry resulted from a tense end to World War II (see SSWH19), conflicting geopolitical goals related to the spread of capitalism and communism, and an intense arms race. This Cold War never resulted in armed conflict between the two superpowers but it did profoundly shape the world in the period.

While studying this standard, students will be expected to explain the social, economic, and political changes that took place in the Middle East, Africa, India, and China. Students should analyze the extent to which these changes were shaped by the Cold War rivalry between the US and the USSR.

Resources:
View this video from Crash Course World History for a quick overview of the Cold War.
https://www.youtube.com/watch?v=y9HjvHZfCUI

a. Explain the arms race, include: development of nuclear weapons and efforts to limit the spread of nuclear weapons.

In an effort to beat both the Axis powers and the Soviets to the creation of a nuclear weapon, the United States spent nearly $2 billion in research and development of the atomic bomb. By 1945, they had successfully built two such bombs, which were dropped on Japan in August of the same year. The Soviets secured nuclear weapons technology in 1949, and thus began an unprecedented arms race between the Soviets and the Americans. In 1952, the U.S. built the first hydrogen-bomb, a weapon with much greater destructive power, with the Soviets following suit within a year. The arsenals amassed on each side created fear and tension between the two nations. It also created a balance of power based on the principle of “mutually assured destruction,” meaning that each side could completely destroy the other many times over.

Over the course of the Cold War, Soviet and U.S. leaders made efforts to limit the use and spread of nuclear weapons. The United States, Soviet Union, and Britain signed the Nuclear Test Ban Treaty in 1963. By banning tests in the atmosphere, space, and underwater, they hoped to minimize the environmental impacts of radiation. The agreement, however, still allowed for tests to take place underground. In 1968, the Nuclear Non-Proliferation Treaty, signed by 137 countries, aimed to limit the spread of nuclear weapons technology. Disarmament efforts continued through the 1970s, but were impeded by the interests of the military and arms manufacturers as part of the military-industrial complex.

SSWH20 Demonstrate an understanding of the global social, economic, and political impact of the Cold War and decolonization from 1945 to 1989.

b. Describe the formation of the state of Israel and the Arab-Israeli Conflict.

In 1939, Britain, who controlled Palestine, reversed its 1917 Balfour Declaration, which had promised to secure a Jewish homeland. This deepened conflict between Jews and Arab Palestinians, both of whom had historical claims to the land. Following World War II, Holocaust survivors poured into Palestine, and built up American support for their own nation-state. Tensions continued to grow, and in 1947 Britain turned the problem over to the United Nations. In November 1947, the United Nations voted to separate Palestine into two separate states: one Jewish, one Arab. This plan was accepted by Jews, but rejected by the Arabs. In May of the following year, Israel declared independence. Its Arab neighbors quickly moved against the new nation. The war ended with Israel winning the war and increasing its territory, while some 700,000 Palestinians were uprooted and left as refugees, their lands being given to Jewish immigrants. This situation left peace unsettled in the region.

In 1967, Israel responded to Egyptian military movements, and in six days of conflict won the Sinai Peninsula and Gaza Strip from Egypt, the Golan Heights from Syria, and the West Bank and Eastern Jerusalem from Jordan. This resulted in much greater territory for Israel and many more Palestinian refugees. The Palestinian Liberation Organization (PLO), led by Yasir Arafat gained support among Arab Palestinians. The PLO fought for the destruction of Israel through guerilla warfare including, bombings and airplane hijackings. Israel responded with force, and the conflict continued.

In 1993, the PLO and Israel reached a peace agreement, known as the Oslo Accords. This historic, yet fragile, deal gave Palestinians the Gaza Strip and the West Bank territories, where they could govern with limited self-rule. This would be done under an independent Palestinian Authority, which recognized Israel and pledged to end terror attacks. Both Jews and Arabs rejected the Oslo Accords – Jews because Israel gave up land, and Arabs because they didn’t secure their own state. The Palestinian terror campaign and violent Israeli reprisals continued. In 2003, the United States, Russia, the European Union, and the United Nations presented a “road map for peace” to Israelis and Palestinians, with steps to take toward a settled peace in the region. Little progress has been made, each side blaming the other for slow movement toward peace.
Resources:
Check out this resource from PBS for an overview of the Arab-Israeli Conflict that considers the point of view of both the Palestinians and Jews.
SSWH20 Demonstrate an understanding of the global social, economic, and political impact of the Cold War and decolonization from 1945 to 1989.

c. Analyze the rise of nationalism and the revolutionary movements in Asia (i.e. India and China) and Africa.

Indians had pushed for self-rule since the late nineteenth century, and demands grew louder following World War I. During World War II, Mohandas K. Ghandi and the Indian National Congress started the Quit India movement in an effort to achieve immediate independence from the British. The British treated this movement as a rebellion, jailed Ghandi and 60,000 others. Meanwhile, the Muslim minority wanted its own state, separate from the Hindus in India. In 1947, the British left India after hastily partitioning the sub-continent into Hindu India and Muslim Pakistan. This partition was troubled from the start, however, as Hindus and Muslims were often neighbors. Following independence Hindus and Muslims turned on one another, the violence resulting in the death of nearly a million Muslims and 10 million more as refugees. In January 1948, a Hindu extremist assassinated Ghandi for his tolerance of Muslims. Border clashes continued for decades in the Kashmir province on the border between India and Pakistan. Other nationalist groups also wanted independence from India. In the 1980s, Sikhs in the Punjab province fought for self-rule, a movement that was put down by Prime Minister Indira Ghandi. A few years later, the Tamil-speaking Hindu minority in Sri Lanka also pushed for their own nation. The Indian government similarly squashed their efforts.

During the 1930s, China suffered a civil war between the Guomindang Nationalist government headed by Chiang Kai-shek and the Communists led by Mao Zedong. Both sides paused the civil war to fight together against the Japanese during World War II, but in 1945 the civil war resumed. The Nationalists’ policies eroded their popular support, leading to Communist victory in 1949. Nationalist leaders fled to Taiwan and Mao founded the People’s Republic of China.

Mao began the first Five Year Plan in 1953 which successfully increased agricultural and manufacturing outputs. It was a violent campaign of land reform, however, that killed millions. In 1958, Mao instituted the Great Leap Forward, which aimed to build on the first plan’s successes, but was a failure and resulted in millions of people dying of starvation in just a few years. Mao pushed forward with the Cultural Revolution in 1966, a program of violent social change designed to rid China of anything from the “old way.” After Mao’s death in 1976, moderates gained power, introduced elements of a market economy and led China to major economic growth.
World War II created a powerful wave of nationalism in African colonies. Africans began to push back against colonization, especially after India gained independence. Each nation had its own struggle, and the European powers all responded differently.

Africans in the Gold Coast, a British colony, were the first to gain their independence. Led by Kwame Nkrumah, a man inspired by U.S. civil rights efforts, Marcus Garvey, and Mohandas Ghandi, Africans held strikes and boycotts against the colonial power. They achieved independence in 1957, electing Nkrumah as the first prime minister and changing the country’s name to an ancient African one, Ghana. Ghana’s success provided more inspiration to other colonies. Kenya, though, had many more white settlers, who owned the majority of the colony’s fertile land. Jomo Kenyatta led a nonviolent fight for the land, but radicals turned to guerilla fighting. The British labeled these fighters the Mau Mau and put thousands in concentration camps and killed thousands more. Kenyans finally achieved independence in 1963 and elected Kenyatta as their first president.

Southern Rhodesia was a self-governing British colony ruled by a small white minority. This white minority claimed independence in 1965 in response to British pressure to govern by majority rule. Africans responded with guerilla tactics and successfully opened the government to African majority rule. Southern Rhodesia became Zimbabwe, and Robert Mugabe, the most radical candidate, won the first free election in 1980 after which he instituted a one-party system limiting political freedom.

Unlike Britain and France, Belgium had no intention of letting go of its colonies and did nothing to transition them toward independence. As a result, when the Congo was thrust into sudden independence in response to violent protests, civil war ensued. In 1965, army general Mobutu took control and built a brutal dictatorship that lasted over 30 years.

African nationalists fought long wars against Portugal who held onto their colonies until 1974 when the military took over in Portugal and pulled out of Africa. Guinea-Bissau, Angola, and Mozambique were hurled into independence without a good foundation for either their governments or their economies.

South Africa had achieved self-rule in 1910, but a white minority held all political and economic power. In 1948 the Afrikaner National Party, made up of Dutch descendants, instituted apartheid, a rigid system of racial segregation designed to maintain white power. The African National Congress (ANC) organized protests, and was banned by the government in 1960. For the next three decades, South Africa helped white minorities in neighboring countries maintain their power as well. In 1989, President F. W. de Klerk recognized the need for reform; he ended apartheid and the ANC ban.

SSWH20 Demonstrate an understanding of the global social, economic, and political impact of the Cold War and decolonization from 1945 to 1989.

d. Analyze opposition movements to existing political systems, include: anti-apartheid, Tiananmen Square, and the fall of the Berlin Wall.

In response to apartheid laws instituted in 1948 by the white Afrikaner National Party, the African National Congress organized acts of peaceful civil disobedience. The government responded to one such march by shooting and killing more than 60 peaceful demonstrators in Sharpeville. After this, the ANC and Nelson Mandela embarked on a more violent course of action. The government banned the ANC in 1960 and arrested Mandela in 1964, but he remained a popular symbol of protest. Archbishop Desmond Tutu and others continued the fight from within and outside of South Africa. Many South African whites also joined the movement. In 1976, police shot black school children who were protesting, leading to riots across the country. In the 1980s, the government made small concessions, but Black Africans were still excluded from politics and segregated in civil life. In 1989, President F. W. de Klerk instituted reforms that legalized the ANC, ended apartheid, and freed Mandela from prison. This, however, was not enough to end the violence in the nation. Finally, in 1994, the first multi-racial election was held. South Africans elected anti-apartheid leader Mandela as president.

During the 1980s, when moderates controlled the government following Mao’s death, many Chinese argued for more political freedom and economic reforms. This movement culminated in Tiananmen Square in Beijing. Hundreds of thousands of protesters filled the square for weeks calling for democracy. Students staged a hunger strike, and others built barricades. The government sent in troops and tanks, which finally broke through the barricades and began to fire on the protesters killing or wounding thousands. More were arrested. Through this show of force, the government maintained tight control and demonstrated the limits of the reforms it was willing to make.

In 1961, Communists built a wall of concrete and barbed wire in East Berlin along its border with West Berlin. They built and patrolled the wall to keep East Germans from escaping to the West, shooting anyone caught trying to cross over. The wall became a symbol of a divided Europe and, in fact, a divided world. As the Soviet system began to fall apart in the late 1980s, protests in East Germany convinced the government, which no longer had Soviet backing, to open the borders. In 1989, Germans on both sides of the wall, tore down the wall, which has since become a symbol of the collapse of communism.

TEACHER NOTES
WORLD HISTORY

SSWH21 Examine change and continuity in the world since the 1960s.

Overview: Students will be expected to explain how nationalism, capitalism, communism, and social reform movements continued to transform governments, reshape the map of the world, and caused violent conflict in the second half of the 20th century. Further students must explain the factors that led to the demise of the Soviet Union and the rise of the United States as the world’s only superpower. Students should examine the proliferation of violence by non-state actors targeted at civilians that resulted from the profound changes in this period and discuss the growth in the use of the term terrorism to describe these events.

SSWH21 Examine change and continuity in the world since the 1960s.

a. Identify ethnic conflicts and new nationalisms, include: Pan-Africanism, Pan-Arabism, and the conflicts in Bosnia-Herzegovina and Rwanda

Pan-Africanism had its roots in the early 20th century, but reemerged in the 1960s and 1970s. It advocated for Black Nationalism and the unity and cooperation of African peoples in Africa and around the world. In the United States it manifested as the Black Power movement and inspired African Americans to explore African cultural roots. In Africa, in an effort to correct damage done by colonialism, the Organization for African Unity was formed in 1963. The African Union, influenced by the European Union, organized in 2002 to promote the political and economic integration of African countries.

Pan-Arabism also had its roots in the early 20th century. This nationalist movement emphasized Arabs’ common history and language, and aimed to create a single Arab state. After the 1960s, however, the movement was much less about merging Arab states together, and more about creating institutions that would promote trade, foster cultural exchange, build up common economic goals, and provide military cooperation between Arab countries. It emphasized political cooperation while keeping the existing states intact. In reality, however, the Arab states did little to achieve these goals as trade barriers remained in place and the restricted movement of people continued. The Persian Gulf War in the early 1990s highlighted the deep divisions that existed between Arab states.

Following World War I, Bosnia and Herzegovina were joined with Serbia, Croatia, Montenegro, and Slovenia to form Yugoslavia, a country under Soviet influence. Once Soviet rule ended in 1990, Yugoslavia, like other countries in Eastern Europe were politically free, but in poor economic condition. Ethnic tensions came quickly to the surface. Yugoslavia, though united by a common language was both ethnically and religiously diverse. In 1991, Croatia and Slovenia asserted their independence. Bosnia followed suit in 1992, but Bosnia was less homogenous than Croatia or Slovenia, and was plagued by violence from the start. Muslims were the largest group, but not a majority. Bosnian Serbs, a smaller minority, wanted to remain with Serbian-controlled Yugoslavia. Bosnian Serbs began a system of ethnic cleansing, using terror and murder, to rid Bosnia of Muslims. Foreign powers were slow to intervene. When the UN made efforts to protect Muslims, Serbs continued to bomb Muslim areas and UN safe zones. NATO intervened in 1995, bombed Serbian targets and brought them to peace talks. The talks resulted in the Dayton Accord, which gave Bosnian Serbs control over limited territory while recognizing the authority of the Muslim-controlled state government.

Foreign powers were again slow to intervene in Rwanda in 1994 when Hutus massacred approximately 800,000 Tutsis in a matter of 100 days. The roots of this genocide date back to German colonial rule which strengthened the Tutsi minority and set up a Tutsi monarchy. In 1961, a Hutu coup set up a Hutu national government. Periodic violence flared up throughout the 1960s and 1970s, and again in 1991, which led to negotiations that would allow Tutsis to be part of the government. Hutu extremists opposed this move. The organized massacre of Tutsis and moderate Hutus began when a plane carrying the Rwandan president was shot down over the capital. The extremists encouraged and estimated 200,000 Hutus across the country to participate in the genocide by killing their Tutsi neighbors. The killing ended as the Tutsis fought back and took over the capital. UN peacekeeping forces arrived in meaningful numbers in June, after 700,000 were already dead and millions more had fled to neighboring countries, mostly Zaire.

SSWH21 Examine change and continuity in the world since the 1960s.
b. Describe the reforms of Khrushchev and Gorbachev and the breakup of the Soviet Union in 1991 that produced independent countries.

When Nikita Khrushchev came to power in 1958 he embarked on a policy of de-Stalinization. He criticized and made Stalin’s crimes known. He eased censorship, softened restrictions on artists and intellectuals, freed political prisoners, and ended the secret police’s fear tactics. He also enacted economic reforms that gave more control to local communities and tried to refocus the economy to create more consumer goods.

Mikhail Gorbachev took power in 1985 and issued broad reforms in the Soviet Union that then got away from him. His reform efforts were two-pronged. Glasnost referred to “openness.” It ended censorship and allowed people to openly discuss problems in the Union and with the Communists. Perestroika, meaning “restructuring,” aimed to remake the government and the economy to allow for more efficiency and more productivity. He worked to streamline bureaucracy and allowed for limited private enterprise. These changes resulted in economic turmoil, food shortages, and high prices. The reforms also opened the way for political unrest as dissidents were allowed to have a voice. Eastern European countries, seeing the Soviet’s weakness, declared independence, and nationalism rose throughout the Soviet Union. Gorbachev was unable to hold them all together. A coup by hardline communists against Gorbachev in 1991 failed, but it severely weakened his ability to govern and maintain the Soviet Union. He resigned later in the year, ending the Soviet Union. As the Soviet Union fell apart, the remaining republics each declared their independence.

SSWH21 Examine change and continuity in the world since the 1960s.

c. Analyze terrorism as a form of warfare in the contemporary world.

Terrorism is an ancient tactic, but its use around the world has increased since the 1960s. Terrorism refers to violence against civilians for political purposes. It is meant to get the attention of governments, and terrorists believe that even harsh reprisals are productive by garnering sympathy for their causes. Terrorist acts include bombings, hijackings, kidnappings, and shootings. During the 1960s and 1970s, both sides of the conflict in Northern Ireland, Catholics and Protestants, used terrorist tactics. The British sent in troops who violated the civil rights of IRA (Irish Republican Army) members and Catholic communities. Peace was finally reached in 1998 with the Good Friday Agreement. Since the 1960s, urban terrorists in Latin America have targeted banks, stores, police departments, public buildings and military posts in fights against repressive governments and U.S. economic domination. Terrorist organizations plagued civilians and governments throughout Latin America, notably in Peru, Columbia, Brazil, and Mexico. Some were Marxist organizations; others were motivated by nationalism. In the 1990s, the terrorist organization al-Qaida, led by Osama bin Laden, targeted the foreign influence in Arab countries, specifically by the United States. In 1998 al-Qaida built its terror brand with the bombings of United States embassies in Kenya and Tanzania, and again with the bombing of the USS Cole in 2000. Then, on September 11th of 2001, Al-Qaida orchestrated the hijacking of four airplanes in the United States and flew two of them into the World Trade Center Towers in New York City, and one into the Pentagon outside Washington, D.C. The fourth plane was retaken by the passengers who crashed it into a field in Pennsylvania. American reprisals were swift and harsh. Within a month, U.S. forces were deployed to Afghanistan where it was believed that the Taliban was harboring bin Laden. The government also responded with increased watchfulness and a global “war on terrorism.”

SSWH21 Examine change and continuity in the world since the 1960s.

d. Examine the rise of women as major world leaders, include: Golda Meir, Indira Gandhi, and Margaret Thatcher.

Golda Meir became the first female prime minister of Israel in 1969. She had been a leader of the Zionist movement in the 1920s when she migrated to Israel, and she supported the unrestricted immigration of Jews to Israel. She soon became a leader of the Jewish Agency and signed Israel’s Declaration of Independence in 1948. She became a member of the Knesset, Israel’s parliament, and served as foreign minister in 1956. As prime minister, Meir instituted major programs in housing and road construction. She also tried to form enduring peace agreements with Arab countries, but these efforts came to an unsuccessful end with the Yom Kippur War in 1973.

Indira Gandhi grew up in the Indian independence movement and was jailed by the British for her efforts. In 1964, she became the nation’s second prime minister, after her father, and initially proved popular and energetic. She was voted out of office in 1977, but voted back in 1980. Soon after, Sikhs in the Punjab region began to protest for an independent state. Thousands occupied the Golden Temple in Amritsar, the holiest site for Sikh worship. Gandhi sent troops to attack the demonstrators and killed more than a thousand Sikhs. In response, two of Gandhi’s Sikh bodyguards assassinated her within a few months.

Margaret Thatcher led the Conservative Party in Britain from 1979-1990 as the first female prime minister in Europe. She fiercely opposed communism and embraced a free-market economy. This led her to dramatically cut social welfare programs, ease government controls on business, reduce labor unions’ power, and privatize state-run industries. She maintained close ties with the United States throughout her tenure. Her political decline came when she replaced the property tax with the poll tax. The poll tax was the same percentage of income, regardless of income level. It proved very unpopular, and seeing that she would not win another election, Thatcher resigned in 1990.

TEACHER NOTES
WORLD HISTORY

SSWH22 Analyze globalization in the contemporary world.

Overview: Students are expected to analyze the unprecedented international economic and cultural exchange that took place in the 20th and 21st centuries. Students should evaluate the technological developments that facilitated this exchange. Further students should explore the rise of global and transregional organizations designed to manage these interactions.

SSWH22 Analyze globalization in the contemporary world.

a. Describe the cultural and intellectual integration of countries into the world economy through the development of television, satellites, and computers.

The development of television, satellite, and computer technology since the 1980s has made it possible to disseminate information around the world easily and immediately. Satellites are used for communications, weather, navigation, and military purposes. Television spreads information and art to large numbers of people simultaneously. American and British programs are broadcast internationally, increasing the use of English as a principle world language. Yet, there remains diversity, as telenovelas, for example, also find audiences outside of Latin America. CNN’s broadcast of the Persian Gulf War was watched around the world and inspired international versions of the news network. Computers changed problem solving and processing capabilities. They also provided artists of all types with new tools for film, photography, music, and writing. Miniaturization made computers and many other electronic technologies available to huge numbers of people. The Internet has allowed people to exchange information almost instantly, a phenomenon that has been dubbed the information revolution. It has been embraced as a vehicle for business, dubbed “e-commerce,” and many companies, both global and local, use the internet for marketing, sales, and research.

SSWH22 Analyze globalization in the contemporary world.

b. Analyze global economic and political connections; include multinational corporations, the United Nations, OPEC, and the World Trade Organization.

Multinational corporations have been agents of technological change and global transfers of wealth. Companies in industrialized nations had the economic power to invest directly in mines and plantations in poorer countries. This was made even easier by international trade agreements and open markets. Trade agreements also made it possible for companies to relocate to escape restrictions and regulations imposed by any one nation, especially those in the industrialized world. Developing nations, desperate for foreign investment offered fewer regulations, usually resulting in lower wages and fewer environmental protections in these countries.

Countries around the world joined together in 1945 to create the United Nations. It was designed to maintain peace and security for member nations, and promote international cooperation culturally, politically, and economically. It is made up of a General Assembly in which each member nation has one vote and a Security Council with ten rotating member states and five permanent state members. These permanent members have veto power. The UN administers several organizations that promote peaceful cooperation globally, for example, the World Health Organization to fight disease and the Food and Agricultural Organization to guard against food scarcity. UNICEF works to protect children around the world, and UNESCO coordinates international cooperation as it relates to education, science, and culture.

In 1951, Iran nationalized its oil industry in an effort to receive greater economic benefit from its oil reserves. A boycott of Iranian oil demonstrated, however, that individual countries had little power on the world oil market. In 1960, oil countries in the Middle East and Latin America formed OPEC, the Organization of Petroleum Exporting Countries to promote their collective interests in the global oil market. OPEC has proven to have considerable political as well as economic power. This was most clearly demonstrated in 1973 when, in response to support for Israel in the Yom Kippur War, OPEC cut off shipments of oil to the United States and the Netherlands. This created high prices and an oil shortage in the U.S. Price hikes that followed in 1974 hurt many other countries, including Japan and its manufacturing industries that relied heavily on oil.

In 1995, over 100 nations joined together to create the World Trade Organization to facilitate free and reliable trade around the world. It was designed to reduce trade barriers and enforce trade agreements.
between nations. Free trade, however, was not universally beneficial. It put pressure on manufacturers and workers in developed countries who lost job security and put pressure for domestic social and political reforms on developing countries as conditions for financial support and investment. Division over the WTO’s mission was also evident at a 2003 meeting. Nations were unable to come together when developing countries pushed richer countries to lower their agricultural subsidies that left poorer countries at a disadvantage in the world market.

SSWH22 Analyze globalization in the contemporary world.

- c. Explain how governments cooperate through treaties and organizations to minimize the negative effects of human actions on the environment.

Industrialization around the world plundered natural resources and polluted the environment and nations struggled to come together on solutions. Strip mines ruined land, pesticides destroyed soil, water, and insects, oil spills killed marine life, air pollution led to acid rain, and the emission of greenhouse gases contributed to global climate change. In 1984, a leak at a pesticide plant in India killed over 3,500 people. The meltdown of the Chernobyl nuclear power plant in Russia exposed thousands to lethal levels of radiation. As developing nations worked to gain economic footing through industrialization, solutions to overpopulation and environmental damage are challenging. These nations opposed environmental treaties that would regulate pollution in a way that inhibits their industrial growth. They point to the deforestation and pollution caused by industrialized countries in decades and centuries past. The Kyoto Protocol adopted by over 100 nations at a meeting in 1997, as part of the United Nations Framework Convention on Climate Change, bound participating nations to meet certain emission reduction targets. It put a greater burden on developed countries as they were the ones primarily responsible for the high levels of greenhouse gases, but required action by all countries. Though signed by U.S. President Clinton, the Senate never ratified the agreement, and thus the U.S. remained outside the Kyoto Protocol.
