Training for Georgia Performance Standards

Days 3 and 4: Classroom Implementation

Participant’s Guide
Grades 3 – 5 Mathematics

We will lead the nation in improving student achievement.

This training program was developed by the Georgia Department of Education as part of a series of professional development opportunities to help teachers increase student achievement through the use of the Georgia Performance Standards.

For more information on this or other GPS training, you may go to the math webpage through the Georgia Department of Education website under Curriculum and Instruction or use the direct link http://www.gadoe.org/ci_services.aspx?PageReq=ClServMath.

Use of This Guide

The module materials, including a Content Facilitator’s Guide, Participant’s Guide, PowerPoint Presentation, and supplementary materials, are available to designated trainers throughout the state of Georgia who have successfully completed a Train-the-Trainer course offered through the Georgia Department of Education.

Materials (guides, presentations, etc.) will be available electronically on http://www.georgiastandards.org under the training tab after all trainings of Days 3-4 have occurred. Consult the trainer for availability.

For more information on this or other GPS training, please contact Claire Pierce (404)657-7063 at cpierce@doe.k12.ga.us, Carmen Smith (404)463-1746 at csmith@doe.k12.ga.us, or Dr. Massie McAdoo (404) 463-6924 at mmcadoo@doe.k12.ga.us.
Agenda

Introduction

➢ Review of Stages One and Two
➢ Overview of the Training

Describing the Standards-Based Classroom

➢ “Math Lab Raided” Activity
➢ Dog Wash Task
➢ Math Lab Lesson: Birthday Cookout
➢ What We Should See in a Lesson
➢ Strategies

Classroom Management

➢ Baseball Pizza Party
➢ Quote Activity
➢ Student Involvement and Cooperation

Designing Lessons

➢ Polygon Percent Pattern Task
➢ The Big Picture
➢ Putting it all together
➢ Designing lessons

Action Plan for Redelivery
Module Goal

Demonstrate a deep understanding of the new Georgia Performance Standards and the standards-based education approach, through thoughtful determination of learning goals for specific units of instruction, development of a balanced assessment plan that includes formative and summative assessments, and the design of instruction that will provide students with the knowledge, skills, and understandings necessary to achieve the learning goals. This goal shall be measured by student performance on progress monitoring and on standardized criterion-referenced tests.

Note that the goal will not be reached by any single day of training. It will take preparation and follow up to master this goal.

Module Objectives

By the end of day four of training, participants will be able to:

1. Identify methods to create an environment that fosters student involvement and cooperation in all classroom activities.

2. Describe what a standards-based mathematics classroom looks like and how to choose appropriate instructional strategies.

3. Design lessons that will support the acquisition of content within the grades 3 – 5 frameworks and help students master the standards.
GPS and the Standards-Based Education Process

Stage 1
Identify Desired Results

(Big Ideas) →
Enduring Understandings →
Essential Questions →

Skills and Knowledge

Stage 2
Determine Acceptable Evidence
(Design Balanced Assessments)

(To assess student progress toward desired results)

Stage 3
Make Instructional Decisions

(to support student success on assessments, leading to desired results)
Dog Wash Task
Four girls offered to wash the neighbor's dog for $5.00. They didn't know how to divide the money. The dog owner said: "I will pay 4/5 of the total amount equally to the four of you. The first one to tell me how much money each child should receive will get 1/2 of the other 1/5 of the cost in addition to their portion of the original 4/5."

- If someone gave the dog owner the right answer, how did the money get divided up between the children?

- Did the dog owner pay the full price that the children asked? Why or why not?

- Write to help explain your best thinking using words, numbers, or pictures.
Bob turned 60 this year! His family celebrated by having a cookout. Marcy took orders and found one fifth as many people wanted chicken as wanted steaks, one fourth as many people wanted steaks as wanted hot dogs, and one half as many people wanted hot dogs as wanted hamburgers. She gave her son-in-law, the chef, an order for 80 hamburgers.

• How many people asked for chicken?
• How many people asked for steak?
• How many asked for hot-dogs?
• What percent of the guests ordered each type of entrée?

Write to help explain your best thinking using words, numbers, or pictures. Be prepared to share!
You and 4 friends go to Mellow Mushroom restaurant to celebrate your baseball team’s big win. You order food for your entire table. The restaurant charges a 6% tax for all food items, and since everyone loved the service, you decide to tip the recommended 20% to your waiter / waitress.

- Remember to write out your table’s order and to show all of your work.
- Calculate the total amount, and write a check as your payment (you are paying because you were the captain of the team and are feeling generous!).

Example:
Two large all-meat pizzas for $9.99 each = $19.98
Two medium veggie pizzas for $7.88 each = $15.76
Four large waffle fries for $1.79 each = $7.16
Four large drinks = $3.96
Huge ice cream cake = $12.88.
Subtotal = $59.74
6% tax = 0.06 X $59.74 = $3.58
Total (with tax) = $63.32
20% tip = 0.20 X $63.32 = $12.66
Total Cost (with 20% tip and 6% tax) = $75.98
House Special - Originated when we first began, this Southern Classic features Pepperoni, Sausage, Ground Beef, Bacon, Mushrooms, Onions, Green Peppers, Black Olives, Tomatoes & Ham.

**Salads**

- **Greek**
  - Regular: $5.75
  - Lil': $3.75
  - Lettuce, Purple Cabbage, Green Peppers, Black Olives, Onions, Black Olives, Tomatoes, Mozzarella & Sprouts

- **Chef**
  - Regular: $5.75
  - Lil': $3.75
  - Lettuce, Purple Cabbage, Onions, Green Peppers, Mushrooms, Black Olives, Tomatoes, Mozzarella & Sprouts

- **Tossed**
  - Regular: $4.75
  - Lil': $2.55
  - Lettuce, Purple Cabbage, Tomatoes & Mushrooms

- **Caesar**
  - Regular: $5.75
  - Lil': $3.75
  - Romaine, Lettuce, Croutons, Parmesan Cheese & Caesar dressing

- **Field Green**
  - Regular: $5.75
  - Lil': $3.75
  - Play the field with our field green salad. This healthy concoction has a mix of the best & freshest!
  - Topped w. Mushrooms & Tomatoes.

**Munchies**

- **Spring Water Basted Pretzels**
  - Half (3) $3.50 Whole (6) $5.75
  - Parmesan or Cinnamon

- **Garlic Bread**
  - Whole: $1.75
  - W/ Cheese: $2.50

**Drinks**

- **Fountain & Fruitopia**: $1.35
- **Juices**: $1.75
- **Iced Tea**: $1.35
**Polygon Percent Patterns**

</tr>
</tbody>
</table>

**Concepts:**
- Polygon
- Percent

**Knowledge and Skills:**
- Can identify/describe common polygons
- Can convert between percent notation and fraction notation

**Materials** (for each team):
- three copies of the 60-triangle pattern handout
- five sets of polygons, cut from construction paper, using the "Cutout Patterns" handout
- one glue stick

**Procedure:**

This activity is best done with students working individually or in teams of two.

Distribute the handouts and polygons. (Instead of cutting out the shapes yourself, you may wish to give the students safety scissors and sheets of colored paper on which the shapes have been copied.)

Explain the assignment to the class. Show students an example that you prepare beforehand, of, say, a pattern which covers 30 of the triangles of the figure, or 50% of it.

Students will need to work out how to determine the number of triangles their patterns should cover, given the percentage. Give individual help as necessary, but let them try to work this out on their own as much as possible. One good strategy is "guess and check":

a) choose a number of triangles (say, 15),
b) write the fraction that shows the amount of the whole pattern that would be covered (15/60),
c) reduce that fraction and convert it to a percent (15/60 = 1/4 = 25%). If this is not the percent you wanted, try again, adjusting your guess up or down.

There are 60 triangles in this pattern. Use polygons to make designs that cover part of the pattern.

Make designs that cover three of these percentages of the pattern: 16 2/3%, 20%, 25%, 33 1/3%, 40%, 50%, 66 2/3%, 75%, 80%.

**Big Ideas:**

**Established Goals:**

**Enduring Understandings:**

**Essential Questions:**

**Knowledge:** *The student will know:*

**Skills:** *GPS: The student will be able to:*

### Stage 2: Assessment Evidence
Performance Tasks, Projects:

Quizzes, Tests, Academic Prompts:

Other Evidence:

Stage 3: Learning Plan

Activities:
This page is for scrap work or notes.
Positive Expectations
People that expect to achieve success are constantly prepared for opportunities to become successful.

“All students can learn and mine will achieve to their fullest potential!”

“I am a good teacher, and know that I can motivate every one of my students to do their very best.”

“I love to learn new things that I can try out in my classroom.”

Negative Expectations
People that expect to be unsuccessful are constantly looking for reasons, evidence, and explanations of why they fail.

“These eighth graders can’t even add, much less divide!”

“My students don’t want to learn. They just come to school to see their friends.”

“Going to those GPS trainings are so boring. I have better things to do with my time.”

Some Suggested Classroom Procedures
Remember to explain them clearly, practice them until they be come routines, and reinforce them as needed.

- Entering the classroom
- Getting to work immediately
- What to do if tardy
- End-of-class dismissal
- Indicating whether understand
- Participating in discussions
- When need paper or pencil
- Keeping desk orderly
- Checking out materials
- Listening/responding to questions
- Fire drill
- When visitors are in the room

- Coming to attention
- When absent
- Working cooperatively
- Changing groups
- Keeping notebook
- Going to the office
- Need help or conferencing
- Knowing the day’s schedule
- Finding assignment directions
- Walking in the hall during class time
- When get sick
- When teacher is out of room

- Exchanging papers
- Returning student work
- Passing in papers
- Moving about the room
- Going to the library
- Headings on papers
- When finish early
- After an interruption
- Asking a question
- When a school-wide announcement is made
- Saying “thank you”
- Re-arranging desks/furniture

Adapted from How to be an Effective Teacher: The First Days of School by Harry K. Wong & Rosemary T. Wong, page 193
**Albertville, AL Math Lab Raided**

Albertville Police, responding to an anonymous tip, found an active math lab inside a school on Tuesday morning.

The police chief said one of his officers “…received information that there was an active hands-on math class being taught at the school. With that information, the K-9 officer, two other officers, and another official went to that address and located the math lab.”

In the classroom at the school at the time officers arrived, were two fulltime teachers. Upon questioning, both admitted to attending unauthorized out-of-district teacher training from northeastern and midwestern publishers' consultants on hands-on math.

The chief added that containers of Unifix blocks and Cuisenaire rods were found, along with several boxes of controlled TI graphing calculators, were also discovered. The chief said, “We are also investigating some data analysis software found at the location, which was reportedly stolen in Georgia from a GPS math workshop. No one has been officially charged in that matter yet, but it is under investigation,” the chief said.

Officer Matt Fitzgerald, who recently completed a specialized manipulatives-handling and other cognitively-hazardous materials training course, was called in to assist in reducing a hazardous situation and clearing the crime scene. Students were given circa-1975 Laidlaw Spectrum drill-and-practice workbooks to begin their de-programming and break their dependency on counters and other visual aids.

The Marshall County Educational Enforcement Unit (MCDEU) was also called to the scene. The director said, “It was a fairly large setup.”

Portions of the illicit lab were, according to Phillips, in several rooms of the school, including a stock room and the library.

While there were no children involved with the incident, there were apparently several other teachers, including two new teachers, who were apparently being encouraged to participate in the illicit activities.

All four suspects were placed in the Marshall County Correctional Facility on various bond amounts, all of which were large hard-to-factor 5-digit prime numbers. One of the suspects was given a no-bond for failure to appear on an unrelated charge of encouraging student questions.

The chief expressed his gratitude at the fine police work of his officers and the MCDEU that led to the arrests of the four individuals and dismantling of the illegal lab.
What should we see in a standards-based mathematics classroom?

- Warm-up
  - connected to the lesson
  - starts students thinking in right direction

- Mini lesson, opening, setting the stage
  - checks for prior knowledge
  - reviews needed skills
  - left in view for quick access during work period

- Work period, Activity period
  - rigorous mathematics
  - use of previously learned concepts in service of new ideas
  - collaboration and verbalization
  - process skills
  - individual accountability

- Summary, Closing
  - presentation and comparison of different approaches
  - students commenting on and questioning the approaches of other students
  - teacher guiding the discussion, if necessary, to solidify concepts, skills and procedures to be learned
  - clarifying of misconceptions
Role of the Teacher in a Standards-based Classroom

- Plan authentic learning experiences.
- Provide solid foundations in math to promote application of skills and knowledge
- Talk less, listen more.
- Circulate through the classroom, facilitating math discussions.
- Provide clarification when necessary.
- Ask questions that encourage reasoning and making connections.
- Provide clarification when necessary.
- Ask questions that encourage reasoning and making connections.
- Establish classroom procedures to promote effective management of small groups of differentiated learners.
- Participate in ongoing assessments of all learners.

Role of the Student in a Standards-based Classroom

- Work individually, in pairs, or small groups to complete a task.
- Gather data, share ideas, look for patterns, make conjectures, and utilize problem-solving strategies.
- Explore mathematical relationships and make connections to real life experiences.
- Ask questions and look for solutions.
- Explore mathematical relationships and make connections to real life experiences.
- Ask questions and look for solutions.
**Glossary of Instructional Strategies**

**Assigned Questions** - Assigned questions are those prepared by the teacher to be answered by individuals or small groups of students. Students discuss their responses with one another or with the teacher. Particular positions or points-of-view should be supported by evidence. In some instances, it may be desirable for students to generate their own set of questions.

**Brainstorming** - Brainstorming is a large or small group activity which encourages children to focus on a topic and contribute to the free flow of ideas. The teacher may begin by posing a question or a problem, or by introducing a topic. Students then express possible answers, relevant words and ideas. Contributions are accepted without criticism or judgment.

**Case Study** - Case studies are stories or scenarios, often in narrative form, created and used as a tool for analysis and discussion. Cases are often based on actual events which add a sense of urgency or reality. Case studies have elements of simulations but the students are observers rather than participants. A good case has sufficient detail to necessitate research and to stimulate analysis from a variety of viewpoints or perspectives. They place the learner in the position of problem solver. Students become actively engaged in the materials discovering underlying issues, dilemmas and conflict issues.

**Circle of Knowledge** - A circle of knowledge is a strategy that acts as a framework for effective discussions. The teacher poses a question to the whole class, and the students move into small groups to examine the issue before returning to the large group for further discussion.

**Cloze Procedures** - Cloze procedure is a technique in which words are deleted from a passage according to a word-count formula or various other criteria. The passage is presented to students, who insert words as they read to complete and construct meaning from the text. This procedure can be used as a diagnostic reading assessment technique.

**Computer Assisted Instruction** - Computer-assisted instruction (CAI) refers to any instructional program in which the computer performs, manages, or supports some or all of the teacher/provider functions.

**Concept Attainment** - Concept Attainment is an indirect instructional strategy that uses a structured inquiry process. It is based on the work of Jerome Bruner. In concept attainment, students figure out the attributes of a group or category that has already been formed by the teacher. To do so, students compare and contrast examples that contain the attributes of the concept with examples that do not contain those attributes. They then separate them into two groups. Concept attainment, then, is the search for and identification of attributes that can be used to distinguish examples of a given group or category from non-examples.

**Concept Mapping** - A concept map is a special form of a web diagram for exploring knowledge and gathering and sharing information. Concept mapping is the strategy employed
to develop a concept map. A concept map consists of cells that contain a concept, item or question and links. The links are labeled and denote direction with an arrow symbol. The labeled links explain the relationship between the nodes. The arrow describes the direction of the relationship and reads like a sentence.

**Concept Formation** - Concept formation provides students with an opportunity to explore ideas by making connections and seeing relationships between items of information. This method can help students develop and refine their ability to recall and discriminate among key ideas, to see commonalities and identify relationships, to formulate concepts and generalizations, to explain how they have organized data, and to present evidence to support their organization of the data involved.

**Cooperative Learning** - Cooperative learning is an instructional strategy that simultaneously addresses academic and social skill learning by students. It is a well-researched instructional strategy and has been reported to be highly successful in the classroom.

**Correspondence Lessons** - Correspondence education has a long history. Before the advent of the computer age, correspondence schooling meant print correspondence. Today, however, correspondence education is delivered through a variety of technologies: audio, video and computer.

**Debates** - Debating is a structured contest of argumentation in which two opposing individuals or teams defend and attack a given proposition. The procedure is bound by rules that vary based on location and participants. The process is adjudicated and a winner is declared. Debating is a foundational aspect of a democratic society.

**Demonstrations** - A demonstration refers to a teacher activity and talk that shows students "how"; [demonstrations] apply primarily to skills and processes and are useful for helping students acquire procedural knowledge.

**Didactic Questions** - tend to be convergent, factual, and often begin with "what," "where," "when," and "how." They can be effectively used to diagnose recall and comprehension skills, to draw on prior learning experiences, to determine the extent to which lesson objectives were achieved, to provide practice, and to aid retention of information or processes. Teachers should remember that didactic questions can be simplistic, can encourage guessing, and can discourage insightful answers or creativity. However, effectiveness of this method can be increased by the appropriate addition of "why" questions, and the occasional use of "what if" questions.

**Direct Instruction** - a highly structured instructional approach.

**Drill and Practice** - promotes the acquisition of knowledge or skill through repetitive practice. It refers to small tasks such as the memorization of spelling or vocabulary words, or the practicing of arithmetic facts and may also be found in more supplicated learning tasks or physical education games and sports. Drill-and-practice, like memorization, involves repetition of specific skills, such as addition and subtraction, or spelling. To be meaningful to learners, the
skills built through drill-and-practice should become the building blocks for more meaningful learning.

**Essays** - Essays are research-backed statements of opinion on arguable topics.

**Experiments** - Experiments involve creating a test of a hypothesis where variables have been identified and then specifically identifying one or more of those variables that causes the effect.

**Experiential Learning** - Experiential learning is inductive, learner centered, and activity oriented. Personalized reflection about an experience and the formulation of plans to apply learning to other contexts are critical factors in effective experiential learning. The emphasis in experiential learning is on the process of learning and not on the product.

**Explicit Teaching** - Explicit teaching involves "six teaching functions: daily review, presenting new material, conducting guided practice, provide feedback and correctives, conduct independent practice, weekly and monthly review.

**Field Observations** - Field observations refer to observations made of naturally occurring phenomena by students outside the classroom.

**Games** - Games are structured learning activities that include conflict, control, and rules for winning and terminating the activities.

**Guides for Reading, Listening, Viewing** - Guides for reading, listening, and viewing refer to providing leading questions, diagrams, or statements to assist students in focusing on the important ideas within text, lecture, media, or other presentations.

**Independent Learning** - Independent study refers to the range of instructional methods which are purposefully provided to foster the development of individual student initiative, self-reliance, and self-improvement. In addition, independent study can include learning in partnership with another individual or as part of a small group.

**Indirect Instruction** - indirect instruction is mainly student-centered. Indirect instruction seeks a high level of student involvement in observing, investigating, drawing inferences from data, or forming hypotheses. It takes advantage of students' interest and curiosity, often encouraging them to generate alternatives or solve problems. In indirect instruction, the role of the teacher shifts from lecturer/director to that of facilitator, supporter, and resource person. The teacher arranges the learning environment, provides opportunity for student involvement, and, when appropriate, provides feedback to students while they conduct the inquiry (Martin, 1983).

**Interviewing** - Interviewing, a meeting during which information is obtained by one person from another, is an excellent means for students to gain an insight into another's worldview. Effective interviewing begins with the development of basic skills and thorough preparation. Students may be the interviewer or the interviewee, depending upon the skill set being developed and the information sought.
**Graphic Organizers** - A graphic organizer is a visual communication tool that uses visual symbols to express ideas and concepts, to convey meaning. A graphic organizer often depicts the relationships between facts, terms, and or ideas within a learning task. It is often referred to as a "map" because it can help teachers and students "map out" their ideas in a visual manner. There are many similar names for graphic organizers including: knowledge maps, concept maps, story maps, cognitive organizers, advance organizers, or concept diagrams.

**Inquiry** - Inquiry learning provides opportunities for students to experience and acquire processes through which they can gather information about the world. This requires a high level of interaction among the learner, the teacher, the area of study, available resources, and the learning environment.

**Interactive Instruction** - Interactive instruction relies heavily on discussion and sharing among participants. Students can learn from peers and teachers to develop social skills and abilities, to organize their thoughts, and to develop rational arguments. The interactive instruction strategy allows for a range of groupings and interactive methods. It is important for the teacher to outline the topic, the amount of discussion time, the composition and size of the groups, and reporting or sharing techniques. Interactive instruction requires the refinement of observation, listening, interpersonal, and intervention skills and abilities by both teacher and students.

**Lab Groups** - Lab groups are cooperative learning groups in an experimental setting.

**Learning Activity Pack** - A learning activity package (LAP) refers to a planned series of activities that involve the student in exploring a topic, skill, or concept.

**Learning Centers** - A classroom with learning centers offers various stations at which individuals or groups of students may complete selected tasks or activities. The activities are designed to accommodate a variety of learning styles and challenge the multiple intelligences.

**Learning Contracts** - Learning contracts provide a method of individualizing instruction and developing student responsibility. They permit individual pacing so that students may learn at the rate at which they are able to master the material. Learning contracts can be designed so that students function at the academic levels most suitable to them and work with resource materials containing concepts and knowledge that are appropriate to their abilities and experiences. Although this method focuses on the individual, learning contracts also provide an opportunity for students to work in small groups. The teacher may select this approach for some students to support them as they learn to work independently.

**Mastery Lecture** - Mastery lecture is a type of direct instruction. A significant amount of information can be communicated in a relatively short period of time. The quality of a lecture improves when audio and visual aids are incorporated and if interaction between the teacher and the students is facilitated.

**Model Building** - Model building involves the students in the design and construction of a theory, concept, or object.
**Nonlinguistic Representation** - an imagery mode of representation that is expressed as mental pictures and physical sensations such as smell, taste, touch, kinesthetic association, and sound, or in graphic, kinesthetic, or musical forms or products.

**Panel** - Several experts sit around a table and discuss a topic; they may field questions from an audience. Learners may prepare questions in advance for panelists.

**Peer Practice** - Peer practice involves each student rehearsing skills or conceptual information with a peer.

**Problem-Solving** - Learners start a topic by solving a problem that incorporates the concepts of the module. Have participants work in teams to solve a scenario. Begin the presentation with the problem-solving exercise and then debrief the exercise by highlighting important points in the presentation.

**Reading for Meaning** - To read for meaning, students must simultaneously utilize clues from all cueing systems. Readers bring knowledge and past experiences to the reading task to construct interpretations and to determine if the print makes sense to them. It is easier for readers to understand print when the content is relevant to their personal experiences. Familiar content and topics convey meaning or clues through the semantic cueing system. When students are comfortable and familiar with the content of a passage, they can predict upcoming text and take greater risks in reading. Research has repeatedly shown that fluent readers risk more guesses when interacting with unfamiliar print than poorer readers. They derive more meaning from passages than readers who frequently stop to sound or decode words by individual phonemes or letters.

**Reciprocal Teaching** - Reciprocal teaching refers to an instructional activity that takes place in the form of a dialogue between teachers and students regarding segments of text. The dialogue is structured by the use of four strategies: summarizing, question generating, clarifying, and predicting. The teacher and students take turns assuming the role of teacher in leading this dialogue.

**Reflective Discussion** - Reflective discussions encourage students to think and talk about what they have observed, heard or read. The teacher or student initiates the discussion by asking a question that requires students to reflect upon and interpret films, experiences, read or recorded stories, or illustrations. As students question and recreate information and events in a film or story, they clarify their thoughts and feelings. The questions posed should encourage students to relate story content to life experiences and to other stories. These questions will elicit personal interpretations and feelings. Interpretations will vary, but such variances demonstrate that differences of opinion are valuable.

**Research Projects** - Research projects are very effective for developing and extending language arts skills as students learn in all subject areas. While doing research, students practice reading for specific purposes, recording information, sequencing and organizing ideas, and using language to inform others.
**Role Playing** - Taking on roles and interacting in groups actively involves students in learning opportunities. By taking on a perspective other than their own, students begin to appreciate the beliefs, wants and needs, and motivations of others while trying to find creative and effective solutions to challenges.

**Simulation** - Simulations are instructional scenarios where the learner is placed in a "world" defined by the teacher. They represent a reality within which students interact. The teacher sets the parameters of this "world" in which students interact to acquire knowledge and understanding. Debriefing is an essential component of simulation. Simulations are in a way a lab experiment where the students themselves are the test subjects. They experience the reality of the scenario and gather meaning from it.

**Socratic Seminar** - A Socratic seminar allows students to reach deeper understanding of complex texts or issues through rigorously thoughtful dialogue. Unlike debate, the purpose here is not to win or lose but to arrive at understanding.

**Structured Overview** - A structured overview refers to organizing and arranging topics or concepts to make them meaningful to students.

**Surveys** - A survey is a research instrument which involves the asking of questions of a group of individuals. Creating and administering a survey, as well as analyzing the data collected, are all excellent opportunities for students to be active learners.

**Synectics** - The term Synectics from the Greek word *synectikos* which means "bringing forth together" or "bringing different things into unified connection." Since creativity involves the coordination of things into new structures, every creative thought or action draws on synectic thinking. Synectic thinking is the process of discovering the links that unite seemingly disconnected elements. It is a way of mentally taking things apart and putting them together to furnish new insight for all types of problems. It is a creative problem solving technique which uses analogies.

**Tutorial Groups** - Tutorial groups are set up to help students who need remediation or additional practice, or for students who can benefit from enrichment. Tutorial groups provide for greater attention to individual needs and allow students to participate more actively. Peer tutoring occurs when a student (the tutor) is assigned to help other students (the learners). The roles played by teacher, tutor, and learner must be explained and expectations for behavior must be outlined.
General Categories of Instructional Strategies

Direct Instruction: Instructional strategies that involve a high degree of teacher control.

- **Compare & Contrast**
  - Cues, Questions, & Advance Organizers*
  - Demonstrations
  - Didactic Questions
  - Drill and Practice

- **Explicit Teaching**
  - Graphic Organizers
  - Guides for Reading, Listening, Viewing
  - Identifying Similarities and Differences*
  - Mastery Lecture

- **Reinforcing Effort & Providing Recognition**
  - Setting Objectives & Providing Feedback*
  - Summarizing & Note Taking*
  - Structured Overview

Experiential Learning: Instructional strategies where students learn by doing or experiencing authentic or simulated situations.

- **Conducting Experiments**
- **Field Observations**
- **Field Trips**

- **Model Building**
  - Surveys
  - Modeling
  - Nonlinguistic Representations*

- **Role Playing**
  - Games
  - Simulations
  - Synectics

Independent Learning: Instructional strategies during which students work independently, sometimes at their own rate on self-selected assignments or topics.

- **Assigned Questions**
  - Computer Assisted Instruction
  - Correspondence Lessons
  - Essays

- **Graphic Organizers**
  - Homework and Practice*
  - Learning Activity Package
  - Learning Centers

- **Learning Contracts**
  - Reports
  - Research Projects
  - Summarizing and Note Taking*

Indirect Instruction: Instructional strategies where the teacher establishes the learning situation or task, but the students determine the direction and/or solution.

- **Case Studies**
  - Concept Attainment
  - Concept Formation
  - Concept Mapping

- **Close Procedures**
  - Generating & Testing Hypotheses*
  - Graphic Organizers
  - Inquiry

- **Problem Solving**
  - Reading for Meaning
  - Reciprocal Teaching
  - Reflective Discussion

Interactive Instruction: Instructional strategies that involve students working with other students and/or the teacher to move toward the learning goals.

- **Brainstorming**
  - Circle of Knowledge
  - Cooperative Learning*
  - Debates

- **Interviewing**
  - Laboratory Groups
  - Panels
  - Peer Practice

- **Problem Solving**
  - Role Playing
  - Socratic Seminars
  - Tutorial Groups

* Marzano, Pickering, and Pollock note that incorporating these nine strategies into instruction can improve student achievement across all content areas and grade levels. [http://www.learn-line.nrw.de/angebote/greenline/lernen/downloads/nine.pdf](http://www.learn-line.nrw.de/angebote/greenline/lernen/downloads/nine.pdf)
### Matching Instructional Formats to Achievement Targets

WHERE TO: Making Instructional Decisions

Stage 3—Learning Plan  Teaching and Learning Activities:

In Stage 3 we consider the instructional strategies and learning experiences needed to achieve the desired results (Stage 1) as reflected in the assessment evidence to be gathered (Stage 2). The activities are planned to develop the targeted understandings and the knowledge and skills identified in Stage 1 and to equip students for the performances of learning specified in Stage 2. The acronym WHERE TO summarizes key elements to consider when designing an effective and engaging learning plan.

To what extent is the learning plan effective and engaging? Consider:

W  O  Know where they’re going (the learning goals), why (reason for learning the content), and what is required of them (unit goal, performance requirements, and evaluative criteria)?

H  O  Be hooked—engaged in digging into the Big Ideas (e.g., through inquiry, research, problem-solving, experimentation)?

E  O  Have adequate opportunities to explore and experience Big Ideas and receive instruction to equip them for the required performances?

R  O  Have sufficient opportunities to rethink, rehearse, revise, and refine their work based upon timely feedback?

E  O  Have an opportunity to evaluate their work and set future goals?

Consider the extent to which the learning plan is

T  O  Tailored and flexible to address the interests and learning styles of all students.

O  O  Organized and sequenced to maximize engagement and effectiveness.

(Understanding by Design Professional Development Workbook, ASCD, 2004, p. 212)
Permission Forms for Student Work

CONSENT AND ASSIGNMENT

This Consent and Assignment (the “Assignment”) is effective when signed by the undersigned Georgia educator (“Educator”) and is between Educator and the Georgia Department of Education (the “GDOE”). For good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree:

1. GDOE gratefully acknowledges the contribution Educator is hereby making to GDOE of the original work product (the “Work Product”) created, developed, worked on or revised by Educator in connection with GDOE’s Georgia Performance Standards Project (the “Project”). So that GDOE may fully use the Work Product in any manner it sees fit, including making copies, modifications and derivative works, Educator hereby fully and unconditionally transfers, assigns and conveys to GDOE all of Educator’s copyright, ownership interests and other intellectual property rights in the Work Product (collectively, the “Intellectual Property Rights”). Educator further agrees that GDOE may publicly recognize and acknowledge Educator’s contribution to, and involvement in, the Project.

2. This Assignment is governed by Georgia law, can only be amended if both parties do so in writing, is assignable solely by GDOE and supersedes any contrary oral or written agreement or understanding. Educator grants to GDOE the power and authority to execute any documentation deemed necessary by GDOE to register or protect the Work Product or Intellectual Property Rights therein or complete the full transfer of the Work Product and Intellectual Property Rights to GDOE which is the purpose of this Assignment.

CONSENT AND ASSIGNMENT

This Consent and Assignment (the “Assignment”) is effective when signed by the undersigned legal guardian (“Guardian”) on behalf of the Guardian and minor Georgia student named below (“Student”), and is among Guardian, Student and the Georgia Department of Education (the “GDOE”). For good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree:

1. GDOE gratefully acknowledges the contribution Student and Guardian are hereby making to GDOE of the original work product (the “Work Product”) created, developed, worked on or revised by Student. So that GDOE may fully use the Work Product in any manner it sees fit in connection with GDOE’s Georgia Performance Standards Project (the “Project”), including making copies, modifications and derivative works, Guardian on behalf of Guardian and Student (and their heirs and successors) hereby fully and unconditionally transfer, assign and convey to GDOE all of Student’s and Guardian’s copyright, ownership interests and other intellectual property rights in the Work Product (collectively, the “Intellectual Property Rights”). Guardian further agrees that GDOE may publicly recognize and acknowledge Student’s contribution to, and involvement in, the Project.

2. This Assignment is governed by Georgia law, can only be amended if both parties do so in writing, is assignable solely by GDOE and supersedes any contrary oral or written agreement or understanding. Student grants to GDOE the power and authority to execute any documentation deemed necessary by GDOE to register or protect the Work Product or Intellectual Property Rights therein or complete the full transfer of the Work Product and Intellectual Property Rights to GDOE which is the purpose of this Assignment.

**Recommended Readings/Viewings: Instruction**

**Note:** A more general list of resources for the standards-based education process is contained in the materials for Day one of training.

Using a meta-analysis of thousands of research studies, Marzano, et al., clearly answer the question, “Which instructional techniques are *proven* to work?” They provide 13 proven strategies that all teachers can use, and they explain the research in a clear, practical manner.

A perfect resource for self-help or school study groups, this handbook makes it much easier to apply the teaching practices outlined in *Classroom Instruction That Works*. The authors guide the reader through the nine categories of instructional strategies that are most likely to maximize student achievement and provide everything needed to use the strategies quickly in classrooms. The book includes the following: exercises to check understanding; brief questionnaires to reflect on current beliefs and practices; tips and recommendations to implement the strategies; samples, worksheets, and other tools to help plan classroom activities; and rubrics to assess the effectiveness of the strategies with students.

The authors analyze research from more than 100 studies on classroom management to answer the questions, “How does classroom management affect student achievement?” and “What techniques do teachers find most effective?” The authors provide action steps, along with real stories of teachers and students, to guide teachers in implementing the research findings.

The authors describe teachers who confront their own concept of mathematics by doing real mathematics themselves. There are also many insights into the classrooms to which these teachers return. If you feel a bit threatened by the call for change, this is a book that can give you some company.

This practical book about the responsibility educators have to teach what matters most includes many examples of educators throughout the nation who have been successful in increasing student performance on state and national assessments. The authors also explore three changes that must take place to achieve this goal: responsible standards, responsible strategies, and responsible assessment practices.

A resource for those who are investigating the teaching of mathematics at the elementary and middle school levels. The emphasis is on student-centered problem solving.

This book explains the “backward design” process that is the backbone of standards-based education. The book explains both the underlying principles and the process teachers can use to put them into practice.

This companion book to Understanding by Design provides discussion questions, graphic organizers, and summaries to support faculty study groups that are exploring Understanding by Design.

This companion book to Understanding by Design is chock-full of templates and examples to help teachers put the process into place.

**Suggested Web Sites for Instruction**

http://ims.ode.state.oh.us/ODE/IMS/Lessons/Default.asp
This web site, created by the Ohio Department of Education, provides guidelines for planning standards-based instruction and for designing standards-based units and lessons.

http://pareonline.net
*Practical Assessment, Research and Evaluation* (PARE) is an on-line journal supported, in part, by the Department of Measurement, Statistics, and Evaluation at the University of Maryland. Its purpose is to provide education professionals access to refereed articles that can have a positive impact on assessment, research, evaluation, and teaching practice.

http://users.edte.utwente.nl/lanzing/cm_home.htm
This web site provides an overview of concept mapping that might be useful for determining those concepts and processes that fit together for units of instruction.
http://www.greece.k12.ny.us/instruction/ela/6-12/BackwardDesign/Overview.htm
This page on the Greece Central School District of New York web site offers multiple resources related to instructional planning using the standards-based education process.

http://www.greece.k12.ny.us/instruction/ela/6-12/Curriculum%20Mapping/Index.htm
This page on the Greece Central School District of New York web site offers multiple templates that can be modified and used to assist in mapping concepts into units of instruction.

http://www.lkwash.wednet.edu/lwsd/html/programs/curriculum/modelunits_t.asp
This web site published by the Lake Washington School District includes a sample planning guide, a unit planning template, and several sample unit plans. GPS need to be unpacked through stages 1 and 2 before employing these templates.

This article lists, explains, and provides examples of nine instructional strategies, identified by Marzano, Pickering, and Pollock, that improve student achievement across all content areas and grade levels.

http://www.pbs.org/pbsyou/about.html
This PBS web site provides information about free, televised, adult education courses in everything from dramatic literature to cooking. Anyone teaching a new course or just wanting to revisit particular content topics might find this site useful.

http://www.rmcdenver.com/useguide/lessons/examples.htm?
This site provides sample lessons/units based on the Texas state standards.

Mathematics Resources

Teacher Resources:

Though not a book about teaching mathematics, this is a readable and informative book on teaching in a constructivist manner. Examples span all curricular areas and all grades.

The first section of this book develops the theory of constructivism through three readable chapters. The next five chapters examine the application of constructivist theory in different disciplines. Deborah Schifter provides the perspective on teaching mathematics. The final section includes four chapters on classroom practice. You will not find this book overly theoretical or hard to read. At the same time, Fosnot’s book is not exactly a light read. You will be challenged and rewarded.

This is an important and valuable publication from the council. Topics include “Mathematics as Sense Making,” “Designing and Selecting Tasks,” “How to Problematize the Curriculum,” “Listening to Children,” “Problem solving with Technology,” and “Problem Posing.” The 17 chapters, all written by top authors in the field, provide an in-depth examination of using a problem-based approach to teaching for understanding. The voices of teachers are also included in short reflections by those who have worked to make teaching through problem solving a success in their classrooms.

Algebra Standards will be integrated throughout the year and students will focus on Algebra the last nine weeks.

**Key Standards**

- **M3N1 a, b, c**
- **M3N2 a, b, c**
- **M3G1 a, b, c, d**
- **M3M1**
- **M3M2 a, b, c, d**
- **M3M3 a, b, c**
- **M3M4 a, b, c**
- **M3M5 a, b, c, d, e, f, g**
- **M3D1 a, b**
- **M3A1 a, b, c**
- **M3M3 a, b**
- **M3M4 c**
- **M3N1 a, b, c**
- **M3N2 a, b, c**
- **M3N3 a, b, c, d, e, f, g**
- **M3M2 b**
- **Related Standards**
- **M3A1 a, b**
- **M3M3 b**

**Related Standards**

- **M3A1 a, b**
- **M3M3 b**

<td>Plane Coordinates and Geometric Figures</td>
<td>Dizzy Fractions and Decimals</td>
<td>Review and Preview</td>
</tr>
</tbody>
</table>

**All units will include skills to maintain and the Process Standards.**

Routine topics such as estimation, computational drill and practice, number patterns and rules, graphing, and problem solving should be addressed on an ongoing basis.

**NOTE:** Mathematical standards are interwoven and should be addressed throughout the year in as many different nits and activities as possible in order to stress the natural connections that exist among mathematical topics.
### DRAFT
Georgia Performance Standards: Curriculum Map
Subject/ Grade Level: Mathematics Grade 5

</table>

All units will include skills to maintain and the Process Standards.

Routine topics such as add/subtract decimals and fractions with like denominators, whole number computation, angle measurement, length/area/weight, number sense, data usage and representations, characteristics of 2D and 3D shapes and order of operations should be addressed on an ongoing basis.

**NOTE:** Mathematical standards are interwoven and should be addressed throughout the year in as many different units and activities as possible in order to stress the natural connections that exist among mathematical topics.
